Preamble	III
----------------	-----

CHAPTER 1

Main Features	1
1.1 Context	1
1.2 Features	2
1.3 <i>PID</i> Actions	5
1.3.1 Proportional Action	5
1.3.2 Integral Action	5
1.3.3 Derivative Action	7
1.4 Different Types of <i>PID</i>	9
1.5 Equivalence of <i>PID</i>	17
1.5.1 Mixed $\leftrightarrow$ Parallel Conversion	19
1.5.2 Mixed $\leftrightarrow$ Series Conversions	19
1.5.3 Parallel $\leftrightarrow$ Series Conversions	23
1.5.4 Summary Tables	25
1.5.5 Examples	29
1.6 <i>PID</i> : Frequency Response	30
1.6.1 Series <i>PID</i>	30
1.6.2 Mixed <i>PID</i>	32

CHAPTER 2

Digital <i>PID</i>	37
2.1 Continuous to Digital Transposition	37
2.1.1 z -Transformation	38
2.1.2 Backward or BW Approximation	38
2.1.3 Forward or FW Approximation	38
2.1.4 z -Transformation and Approximation	39
2.2 Basic Actions	39
2.2.1 Integral	39
2.2.2 Derivative	40
2.2.3 Transposition Tables	41
2.3 Digital <i>PID</i>	42
2.3.1 <i>PID</i> Form	42

2.3.2	RST Form	43
2.3.3	Correspondence Tables	44

CHAPTER 3

Realization Algorithms	55
3.1 Sample Processing	56
3.2 Different Algorithms	58
3.2.1 <i>PID</i> Forms	58
3.2.2 RST Form	63
3.3 Ancillary Features	68
3.3.1 Manual Mode	68
3.3.2 Automatic Mode	68
3.3.3 Limitations	69
3.3.4 Direct/Reverse Choice	75
3.3.5 Inputs/Outputs	76
3.4 Summary	77

CHAPTER 4

Process Models	81
4.1 Different Process Models	81
4.1.1 Stable Systems	81
4.1.2 Integrating Systems	84
4.1.3 Usual Models	85
4.1.4 Identification Methods	86
4.2 Broïda Model	88
4.2.1 Open Loop Identification	88
4.2.2 Closed Loop Identification (Dindeleux, 1989)	89
4.3 2nd Order Model with Delay	90
4.3.1 Open Loop Identification	90
4.3.2 Closed Loop Identification	91
4.4 Strejc Model (Strejc, 1960)	93
4.4.1 Open Loop Identification	93
4.4.2 Closed Loop Identification	97
4.5 Reverse Response Strejc Model	100
4.6 Integrating Model with Delay	103
4.6.1 Open Loop Identification	103
4.6.2 Closed Loop Identification	104
4.7 Integrator and 1st Order Model	104
4.7.1 Open Loop Identification	104
4.7.2 Closed Loop Identification	107
4.8 Integrating Model and Order n	110
4.8.1 Open Loop Identification	110
4.8.2 Closed Loop Identification	113
4.9 Integrating Reverse Response Model	115
4.9.1 Open Loop Identification	115

4.9.2	Closed Loop Identification	121
4.9.3	Case of Delay	121

CHAPTER 5

Evaluation of Performances	123
5.1 Process Performances	123
5.1.1 Step Response	123
5.1.2 Frequency Response	124
5.2 Adjustment Objectives	125
5.3 Closed Loop Setting Criteria	126
5.3.1 Stability Criteria	128
5.3.2 Step Response Criteria	130
5.3.3 1st or 2nd Order Systems	131
5.3.4 Order n Systems: Naslin Criterion (Naslin, 1968, 1962)	131
5.3.5 Optimization Criteria	134
5.3.6 Frequency Criteria	135

CHAPTER 6

Ziegler–Nichols and Associated Methods	137
6.1 Ziegler and Nichols Closed Loop Method	137
6.2 Ziegler and Nichols Open Loop Method	139
6.3 Cohen and Coon Method (Cohen and Coon, 1953)	142
6.4 Takahashi Method (Takahashi <i>et al.</i> , 1971)	143
6.5 KT Method of Aström and Hägglund (1995)	144
6.5.1 Ultimate Gain Method	144
6.5.2 Open Loop Method	145
6.5.3 Adjustment Curves	147
6.6 Performances	148
6.6.1 Stable Process	148
6.6.2 Integrating Process	153
6.6.3 Process with Delay	155
6.7 Overview Summary	157

CHAPTER 7

Cancellation Methods	159
7.1 Dindeleux Method (Dindeleux, 1989)	159
7.1.1 Stable Process	159
7.1.2 Integrating Process	160
7.1.3 Ultimate Gain Method	161
7.1.4 Performances	161
7.2 Haalman Method (Haalman, 1965)	170
7.3 Cancellation for 2nd Order	173
7.3.1 Stable Process	173
7.3.2 Integrating Process	180

7.4	Direct Synthesis Method and IMC Method	188
7.4.1	Direct Synthesis Method	188
7.4.2	IMC Method (Internal Model Control)	189
7.4.3	<i>PID</i> Controller	190
7.5	Synthesis Summary	195

CHAPTER 8

Optimization Methods	197
8.1 Integral Criterion Method	198
8.1.1 Study of Rovira, Murrill and Smith (Rovira <i>et al.</i> , 1967)	199
8.1.2 Study of Miller, Lopez and Smith (Miller <i>et al.</i> , 1967)	199
8.1.3 Study of Kaya and Scheib (Kaya and Scheib, 1988)	200
8.1.4 Example	202
8.2 Chien, Hrones and Reswick Method (Chien <i>et al.</i> , 1952)	203
8.3 Samal Method	207
8.4 Choice of a Method	218

CHAPTER 9

Pole Placement Methods	219
9.1 Naslin Method (Naslin, 1968, 1962)	219
9.1.1 Original Method	219
9.1.2 Industrial Method (Chaussard <i>et al.</i> , 1967)	222
9.1.3 Method for Integrating Process	240
9.1.4 Variant for Integrating Process	244
9.1.5 Method for Integrating Strejc Model	249
9.2 Classical Method (Corriou, 2018; Flaus, 1994)	252
9.2.1 Setting Criteria	254
9.2.2 Performances	256
9.2.3 Case of a Derivative on the Measurement	259
9.2.4 Use	261
9.3 Dominant Poles Method	261
9.3.1 Principle (Aström and Hägglund, 1995)	261
9.3.2 Application	262
9.3.3 Settings	263
9.4 Choice of a Method	265

CHAPTER 10

Frequency Methods	267
10.1 1st Method: Phase Margin	268
10.2 2nd Method: Resonance Factor	272
10.2.1 Examples of Application	274
10.2.2 Case of Integrating Systems	276
10.3 Kessler's Method (Kessler, 1958, 1955)	280
10.3.1 2nd Order Process	281

10.3.2	3rd Order Process	283
10.3.3	Performances	287
10.3.4	Summary	287
10.4	KLTV Method (Kessler, Landau and Voda) (Voda and Landau, 1995)	292
10.4.1	Basic Settings	292
10.4.2	Auto-Calibration	294
10.4.3	KLTV 1P Method	296
10.4.4	KLTV 2P Method	298
10.4.5	Performances	300
10.5	Use and Choice	302

CHAPTER 11

Digital Settings Methods	303
11.1 Choice of the Sampling Period	303
11.2 Zero Cancellation	304
11.3 Cancellation Method (Buhler, 1986)	305
11.3.1 Principle	305
11.3.2 Process	306
11.3.3 Case of Uncompensated Zeros	306
11.3.4 Choice of HD	306
11.3.5 Controller	307
11.3.6 Use	309
11.3.7 Examples of Responses	309
11.4 Pole Placement Method (Borne <i>et al.</i> , 1993; Landau, 1988)	313
11.4.1 Principle	313
11.4.2 Zero Cancellation of B	314
11.4.3 Pole Placement with RST	314
11.4.4 Process	315
11.4.5 Use	315
11.4.6 Summary Tables	316
11.4.7 Examples	316
11.5 Tracking and Regulation	323
11.5.1 Principle	323
11.5.2 Process	326
11.5.3 Use	326
11.5.4 Examples	327
11.5.5 Summary Tables	331
11.6 Choice of a Dynamic d_1, d_2	331
11.6.1 Choice of Tracking Dynamics	335
11.6.2 Choice of a Regulation Dynamics	338

CHAPTER 12

Adjustments and Use	349
12.1 Sampling Period	349
12.1.1 PI Controller	349

12.1.2	<i>PID</i> Controller	351
12.2	Filter Factor N (Visioli, 2006)	356
12.3	Model Compliance	357
12.3.1	Brořda Model	357
12.3.2	Strejc Model	358
12.3.3	Static Gain	359
12.4	Control Constraints	360
12.5	Use	364
12.5.1	Choice of Controller Type	364
12.5.2	Choice of an Adjustment Method	365
12.6	Conclusion	371
Appendix		373
