

Acknowledgments

I am deeply indebted to my fellow astrophysicists and friends, Steve Shore and Pierre Cox, for the considerable time they spent at improving my poor English. Their insight and recommendations for the astronomical content were also of immense value. I warmly thank Michèle Leduc and Michel Le Bellac, editors of the “Introduction to” series, who made this book possible. I am grateful to them for constantly encouraging me and providing an extremely thorough proofreading and priceless advices for the two versions. Thanks also to the whole team of EDP Sciences for their high-quality editing work, especially to Mrs. Sophie Hosotte and Mrs. France Citrini. I address my thanks to all those who provided an important help for the French version, including James Lequeux, François Bouchet, Lionel Provost, Jean Mouette, Jean-Pierre Bibring, Benoît Mosser, Martin Harwit, Laurent Vigroux and Suzy Collin-Zahn. I would like to express my appreciation to several organizations whose copyright policy is particularly user-friendly and allowed EDP to use a rich iconography, in particular, ESA, NASA, ESO, CNES, JPL, GSFC, JAXA, NRAO, NOAA and Wikipedia.

To all readers around the world eager for astronomy. To young astronomers and students who will make the astronomy of the 21th century.
