

Contents

Chapter 1 Groups and Generating Sets	1
1.1 Binary operations	1
1.2 Isomorphic binary structures	6
1.3 Groups	9
1.4 Subgroups	15
1.5 Cyclic groups	19
1.6 Generating sets	25
1.7 Exercises	27
Chapter 2 Permutation Groups and Alternating Groups	31
2.1 Permutation groups	31
2.2 Alternating groups	38
2.3 Exercises	43
Chapter 3 Finitely Generated Abelian Groups and Quotient Groups	45
3.1 The theorem of Lagrange	45
3.2 Finitely generated abelian groups	48
3.3 Properties of homomorphisms	57
3.4 Quotient groups and isomorphism theorems	60
3.5 Automorphism groups	67
3.6 Simple groups	69
3.7 Exercises	74

Chapter 4 Rings, Quotient Rings and Ideal Theory	78
4.1 Basic definitions	78
4.2 Integral domains	84
4.3 Noncommutative rings	88
4.4 Quaternions	95
4.5 Isomorphism theorems	101
4.6 Euler's theorem	107
4.7 Ideal theory	109
4.8 Exercises	115
Chapter 5 Unique Factorization Domains	119
5.1 Basic definitions	119
5.2 Principal ideal domains	122
5.3 Euclidean domains	125
5.4 Polynomial rings over UFDs	129
5.5 Multiplicative norms	134
5.6 Exercises	138
Chapter 6 Extension Fields	141
6.1 Prime fields and extension fields	141
6.2 Algebraic and transcendental elements	145
6.3 Algebraic extensions and algebraic closure	152
6.4 Finite fields	157
6.5 Exercises	162
Appendix A Equivalence Relations and Quotient Set	165
Appendix B Zorn's Lemma	167
Appendix C Quotient field	169
