Preface

Part I QUANTILE REGRESSION MODELLING

Chapter 1	LINEAR QUANTILE REGRESSION	3
1.1	Education: Mathematical Achievements	3
1.1.1	Introduction	3
1.1.2	Data	5
1.1.3	Estimation Results	7
1.1.4	Confidence Intervals and Related Interpretations	11
1.1.5	Conclusion	16
1.2	Large Sample Properties	16
1.3	Bibliographic Notes	19
Chapter 2	NONPARAMETRIC QUANTILE REGRESSION	20
2.1	Robust Local Approximation Method	20
2.1.1	Introduction	20
2.1.2	Consistency	22
2.1.3	Rate of Convergence	26
2.1.4	Asymptotic Distribution	33
2.1.5	Optimization of Estimate	37
2.1.6	Bibliographic Notes	39
2.2	Nonparametric Function Estimation	40
2.2.1	Introduction	40
2.2.2	Asymptotic Properties	42
2.2.3	Applications	52
2.2.4	Bibliographic Notes	54
2.3	Local Linear Quantile Regression	55
2.3.1	Introduction	55
2.3.2	Local Linear Check Function Minimization	58
2.3.3	Local Linear Double-Kernel Smoothing	62

2.3.4	Bibliographic Notes	68
Chapter 3	ADAPTIVE QUANTILE REGRESSION	69
3.1	Locally Constant Adaptive Quantile Regression	69
3.1.1	Introduction	69
3.1.2	Adaptive Estimation	72
3.1.3	Implementation	73
3.1.4	Theoretical Properties	75
3.1.5	Bibliographic Notes	82
3.2	Locally Linear Adaptive Quantile Regression	82
3.2.1	Introduction	82
3.2.2	Local Linear Adaptive Estimation	84
3.2.3	Algorithm	85
3.2.4	Theoretical Properties	86
3.2.5	Bibliographic Notes	89
Chapter 4	ADAPTIVE QUANTILES REGRESSION	91
4.1	Additive Conditional Quantiles with High-Dimensional Covariates	91
4.1.1	Introduction	91
4.1.2	Methodology	93
4.1.3	Asymptotic Behavior	98
4.1.4	Concluding Remarks	105
4.1.5	Bibliographic Notes	105
4.2	Nonparametric Estimation	105
4.2.1	Introduction	106
4.2.2	Estimator	108
4.2.3	Asymptotic Results	110
4.2.4	Conclusions	126
4.2.5	Bibliographic Notes	126
Chapter 5	QUANTILE REGRESSION BASED ON VARYING-COEFFICIENT MODELS	127
5.1	Adaptive Quantile Regression Based on Varying-coefficient Models	127
5.1.1	Introduction	127
5.1.2	Adaptive Estimation	129
5.1.3	Theoretical Properties	135
5.1.4	Conclusion	142
5.1.5	Bibliographic Notes	143
5.2	Varying-coefficient Models with Heteroscedasticity	143
5.2.1	Introduction	144
5.2.2	Local Linear CQR-AQR Estimation	146
5.2.3	Local Quadratic CQR-AQR Estimation	156

5.2.4	Bandwidth Selection	157
5.2.5	Hypothesis Testing	158
5.2.6	Local m -polynomial CQR-AQR Estimation	159
5.2.7	Discussion	160
5.2.8	Bibliographic Notes	161
Chapter 6	SINGLE-INDEX QUANTILE REGRESSION	163
6.1	Single Index Models	163
6.1.1	Introduction	163
6.1.2	The Model and Estimation	165
6.1.3	Large Sample Properties	168
6.1.4	Conclusions	178
6.1.5	Bibliographic Notes	178
6.2	CQR for Varying Coefficient Single-index Models	179
6.2.1	Introduction	179
6.2.2	Quantile Regression	181
6.2.3	Composite Quantile Regression	184
6.2.4	Discussion	194
6.2.5	Bibliographic Notes	194
Chapter 7	QUANTILE AUTOREGRESSION	196
7.1	Introduction	196
7.2	The Model	197
7.2.1	Description of The Model	197
7.2.2	Properties	199
7.3	Estimation	203
7.4	Quantile Monotonicity	208
7.5	Inference	209
7.5.1	Wald Process and Related Tests	209
7.5.2	Testing for Asymmetric Dynamics	210
7.5.3	Bibliographic Notes	212
Chapter 8	COMPOSITE QUANTILE REGRESSION	213
8.1	Composite Quantile and Model Selection	213
8.1.1	Introduction and Motivation	213
8.1.2	Composite Quantile Regression	216
8.1.3	Asymptotic Relative Efficiency	220
8.1.4	The CQR-oracular Estimator	225
8.1.5	Concluding Remarks	228
8.1.6	Bibliographic Notes	229
8.2	Local Quantile Regression	229
8.2.1	Introduction	229

8.2.2	Estimation of Regression Function	231
8.2.3	Estimation of Derivative	235
8.2.4	Local p -polynomial CQR Smoothing	238
8.2.5	Discussion	246
8.2.6	Bibliographic Notes	246
Chapter 9	HIGH DIMENSIONAL QUANTILE REGRESSION	248
9.1	Diagnostic for Ultra High Heterogeneity	248
9.1.1	Introduction	248
9.1.2	Nonconvex Penalized Quantile Regression	251
9.1.3	Discussion	262
9.1.4	Bibliographic Notes	263
9.2	Bayesian Quantile Regression	264
9.2.1	Introduction	264
9.2.2	Asymmetric Laplace Distribution	265
9.2.3	Bayesian Approach	266
9.2.4	Improper Priors for Parameters	267
9.2.5	Discussion	269
9.2.6	Bibliographic Notes	270
 Part II HIERARCHICAL MODELING 		
Chapter 10	HIERARCHICAL LINEAR MODELS	273
10.1	Bayes Estimates	273
10.1.1	Introduction	273
10.1.2	Exchangeability	274
10.1.3	General Bayesian Linear Model	277
10.1.4	Estimation	281
10.1.5	Bibliographic Notes	283
10.2	Maximum Likelihood from Incomplete Data	283
10.2.1	Introduction	283
10.2.2	Definitions of the EM Algorithm	286
10.2.3	General Properties	290
10.2.4	Bibliographic Notes	296
10.3	EM-algorithm	296
10.3.1	Introduction	297
10.3.2	Covariance Components Models	298
10.3.3	Estimation of Variances and Covariances	301
10.3.4	Computational Notes	303
10.3.5	Bibliographic Notes	309

10.4	Iterative Generalized Least Squares	310
10.4.1	Introduction	310
10.4.2	Basic Model	310
10.4.3	Estimation	312
10.4.4	Random Coefficients	314
10.4.5	Constraints among Parameters	316
10.4.6	Further Applications	316
10.4.7	Errors of Measurement	317
10.4.8	Discussion	318
10.4.9	Appendix 1	319
10.4.10	Appendix 2	320
10.4.11	Appendix 3	322
10.4.12	Bibliographic Notes	323
10.5	Scoring Algorithm	324
10.5.1	Introduction	324
10.5.2	The Model	325
10.5.3	The Log Likelihood Function	328
10.5.4	Two Levels of Nesting	329
10.5.5	An EM Algorithm	333
10.5.6	More Than Two Levels of Nesting	334
10.5.7	Bibliographic Notes	336
10.6	Newton-Raphson Algorithm	337
10.6.1	Introduction	338
10.6.2	Computational Methods	340
10.6.3	Derivatives	341
10.6.4	Matrix Decompositions	345
10.6.5	Estimation of σ and D	347
10.6.6	Discussion and Extension	349
10.6.7	Bibliographic Notes	353
Chapter 11	HIERARCHICAL GENERALIZED LINEAR MODELS	354
11.1	Hierarchical Likelihood	354
11.1.1	Introduction	354
11.1.2	Hierarchical Generalized Linear Models	355
11.1.3	Properties of Maximum h -likelihood Estimates	363
11.1.4	Estimation Procedures	368
11.1.5	Generalizations	372
11.1.6	Discussion	381
11.1.7	Bibliographic Notes	382
11.2	A Gibbs Sampling Approach	383

11.2.1	Introduction	383
11.2.2	Random Effects GLM	385
11.2.3	Bayesian Formulation	386
11.2.4	Gibbs Sampler	387
11.2.5	Conditional Distributions	388
11.2.6	Discussion	392
11.2.7	Bibliographic Notes	392
Chapter 12	HIERARCHICAL NONLINEAR MODELS	394
12.1	Conditional Second-Order Generalized Estimating Equations	394
12.1.1	Introduction	394
12.1.2	The Model	396
12.1.3	Estimation	397
12.1.4	Conditional Variance-Covariance Structures	399
12.1.5	Conditionals	401
12.1.6	Asymptotic Properties	403
12.1.7	Discussion	404
12.1.8	Bibliographic Notes	406
12.2	A Hybrid Estimator	407
12.2.1	Introduction	407
12.2.2	Estimation	408
12.2.3	A Hybrid Estimator	411
12.2.4	Asymptotic Theory	414
12.2.5	Extension to Hierarchical GLMs	424
12.2.6	Discussion	425
12.2.7	Bibliographic Notes	426
Chapter 13	HIERARCHICAL SEMIPARAMETRIC MODELS	429
13.1	Hierarchical Semiparametric Nonlinear Mixed-Effects Models	429
13.1.1	Introduction	429
13.1.2	SNMEM	432
13.1.3	Estimation	435
13.1.4	Computational Aspects	438
13.1.5	Inferences	441
13.1.6	Conclusions	442
13.1.7	Bibliographic Notes	443
13.2	Simultaneously Modeling for Mean-Covariance	444
13.2.1	Background	445
13.2.2	Then Models and Estimation Methods	446
13.2.3	Asymptotic Properties	450
13.2.4	Discussion	458

13.2.5 Bibliographic Notes 459

Part III HIERARCHICAL QUANTILE MODELING

Chapter 14 HIERARCHICAL SPLINE MODELS 463

14.1 Introduction 464

14.2 Nonparametric Estimation 465

14.3 WALD Tests for Regression Quantile Models 467

14.4 Conclusions 470

14.5 Bibliographic Notes 470

Chapter 15 HIERARCHIAL LINEAR QUANTILE MODELING 473

15.1 Introduction 473

15.2 The Hierarchical Quantile Regression Model 474

15.3 EQ Algorithm 475

15.4 Asymptotic Properties 477

15.5 Bibliographic Notes 483

**Chapter 16 HIERARCHICAL SEMIPARAMETRIC QUANTILE
MODELING 485**

16.1 Introduction 485

16.2 The Models and Estimation 487

16.3 Asymptotic Results 492

16.4 Conclusion 499

16.5 Bibliographic Notes 499

**Chapter 17 COMPOSITE HIERARCHICAL LINEAR QUANTILE
MODELING 501**

17.1 Introduction 501

17.2 The Models 502

17.3 Estimation 504

17.4 Asymptotic Properties 506

17.4.1 The Error Distribution is Normal 506

17.4.2 The Error Distribution is Non-normal 509

17.5 Discussion 511

17.6 Bibliographic Notes 511

**Chapter 18 COMPOSITE HIERARCHICAL SEMIPARAMETRIC
QUANTILE MODELING 513**

18.1 Introduction 513

18.2 The Models 515

18.3 Estimation and Algorithm 516

18.4 Asymptotic Properties 517

18.5 Discussion 522

18.6 Bibliographic Notes.....523

Part IV LARGE SCALE APPLICATIONS TO REAL DATA

Chapter 19 APPLICATIONS OF QUANTILE REGRESSION 527

19.1 Introduction.....527

19.1.1 Health and Medicine.....527

19.1.2 Environment535

19.1.3 Economics.....535

19.1.4 Finance.....540

19.2 Applications to Mathematical Education Based on LQR.....540

19.2.1 Background.....541

19.2.2 Description of Data.....542

19.2.3 Methodology.....543

19.2.4 Results.....544

19.2.5 Conclusion.....556

19.3 Application of Local LQR.....556

19.3.1 Triceps Skinfold.....557

19.3.2 Immunoglobulin.....558

19.4 The Widening Gap between the Rich and the Poor.....560

19.5 Boston Housing Analysis Using AQR.....561

19.5.1 Boston Housing.....561

19.5.2 Empirical results.....564

19.6 The Analysis of Japanese Firms in the Chemical Industry
by Employing AQR.....565

19.7 The Analysis of Norwegian Air Pollution Bying Quantile
Varying-coefficient Regression.....568

19.8 Empirical Application to Air Pollution Based HVCMS.....570

19.9 Boston Pricing by Single-index Quantile Regression.....571

19.10 Boston Pricing Using VCSIM.....575

19.11 Two Economic Time Series Basedbon the Quantile
Autoregression.....576

19.11.1 Unemployment Rate.....577

19.11.2 Retail Gasoline Price Dynamics.....578

19.12 The UK Family Expenditure Using Local CQR Methodology.....579

19.13 Analysis of Microarray Dataset.....581

19.14 Analysis of Two Data Sets Through Bayesian Quantile
Autoregression.....585

19.14.1 Immunoglobulin-G.....585

19.14.2	Stack Loss	586
Chapter 20	APPLICATIONS OF HIERARCHICAL REGRESSION MODELS	588
20.1	Two-factor Experimental Designs and Multiple Regression	588
20.1.1	Experimental Designs and Exchangeability	588
20.1.2	Examples with Unknown Covariance Structure	593
20.2	Examples of EM Algorithms	599
20.2.1	Missing Data	599
20.2.2	Grouping, Censoring and Truncation	602
20.2.3	Finite Mixtures	605
20.2.4	Variance Components	607
20.2.5	Hyperparameter Estimation	609
20.2.6	Iteratively Reweighted Least Squares	610
20.2.7	Factor Analysis	612
20.3	Law Schools, Field Mice and Professional Football Teams	613
20.4	A Longitudinal Study of Educational Achievements	624
20.5	Ovarian Follicle and Calcium Supplement	627
20.6	Applications of Hierarchical Generalized Linear Models	630
20.6.1	Procedures for Analysis	630
20.6.2	Poisson-Gamma Model and Pump Failure Data	630
20.6.3	Binomial-Beta Model and Seed Germination Data	632
20.6.4	Gamma-Inverse Gamma Model and the Cake Baking Data	634
20.6.5	Poisson-Gamma Model and Epileptics Data	634
20.6.6	Binomial-Beta Model and Salamander Data	638
20.7	Infectious Disease Data of Indonesia	642
20.8	Epileptic Seizure	646
20.9	Eight Guinea Pigs	648
20.10	Canadian Temperature	653
20.11	CD4 Cell	656
Chapter 21	APPLICATIONS OF HIERARCHICAL QUANTILE REGRESSION MODELING	661
21.1	Household Electricity Demands	661
21.1.1	The Applications of Hierarchical Models to Household Demand	661
21.1.2	Commonwealth Edison Company	665
21.1.3	Stage II Results	666
21.2	Mathematics Education in Canada	673
21.3	The Mean Pixel Intensity of Lymphnodes in the CT Scan	679
21.4	Applications of Composite Hierarchical Linear Quantile Regression	685
21.5	Applications of Semi-HCQR Method to Partial HIV	

Monitoring Data 688

Bibliographic Notes 692

Bibliography 693
