The Transparent Becoming of World

Advances in Consciousness Research (AiCR)

Provides a forum for scholars from different scientific disciplines and fields of knowledge who study consciousness in its multifaceted aspects. Thus the Series includes (but is not limited to) the various areas of cognitive science, including cognitive psychology, brain science, philosophy and linguistics. The orientation of the series is toward developing new interdisciplinary and integrative approaches for the investigation, description and theory of consciousness, as well as the practical consequences of this research for the individual in society.

From 1999 the Series consists of two subseries that cover the most important types of contributions to consciousness studies:

Series A: Theory and Method. Contributions to the development of theory and method in the study of consciousness; Series B: Research in Progress.

Experimental, descriptive and clinical research in consciousness.

This book is a contribution to Series A.
