## Thematics

# Converging Evidence in Language and Communication Research

Linguists have taken a broad view of language and are borrowing methods and findings from other disciplines such as cognitive and computer sciences, neurology, biology, sociology, psychology, and anthropology. This development has enriched our knowledge of language and communication, but at the same time it has made it difficult for researchers in a particular field of language studies to be aware of how their findings might relate to those in other (sub-)disciplines.

CELCR seeks to address this problem by taking a cross-disciplinary approach to the study of language and communication. The books in the series focus on a specific linguistic topic and offer studies pertaining to this topic from different disciplinary angles, thus taking converging evidence in language and communication research as its basic methodology.

Works in the series are designed to appeal to linguists and non-linguists alike. Each work in the series is written and/or coordinated by an expert in a particular field.
