## Acknowledgements

This book is a revised version of my PhD dissertation completed in August 1999 at the Department of Linguistics, Georgetown University.

The original work and the preparation of this manuscript owe much to the guidance and support of many people, who I wish to thank here. First, my greatest gratitude goes to my dissertation supervisor Donna Lardiere, who has been tremendously inspirational and encouraging throughout and after my years of dissertation research. I am also grateful to my committee members, Lisa Zsiga, Laura Benua and Katherine Demuth. I was lucky to have such a great team to work with.

The three children who participated in the study are now old enough to understand what contributions they made to this work. I would like to thank them and their parents for putting up with all the recording sessions, although I hope the children had some fun too.

I am indebted to all of those with whom I have had the benefit of discussing this work. They include Stuart Davis, John Goldsmith, Bruce Hayes, Peter Jusczyk, Margaret Kehoe, Thomas Klein, Haruo Kubozono, Linda Lombardi, Reiko Mazuka, John McCarthy, Alfonso Morales-Front, Bruce Morén, Yvan Rose, Paul Portner, Alan Prince, Paul Smolensky, Caro Struijke, Marilyn Vihman and Draga Zec.

Special thanks are also due to Jools Simner, Bryn Harris and Barbora Skarabela for reading the manuscript and making a number of helpful suggestions; the two anonymous reviewers for their valuable comments and constructive criticisms; Kees Vaes for patiently walking me through the publication process.

Finally, I wish to thank my colleagues at the University of Edinburgh for their support. I am most grateful to Ronnie Cann and Bob Ladd, who, as heads of department, made sure that I would have uninterrupted time to work on this book.
