This volume would never have seen the light of day if it were not for the constant encouragement received from Anna Wierzbicka and Cliff Goddard. Several years ago, they came up with the idea to test the claims and hypotheses of the Natural Semantic Metalanguage approach on a set of typologically related languages. As tentative versions of the metalanguage had already been proposed for French and Spanish, they thought it would be good to also have a look at the other Romance languages, esp. Portuguese and Italian. Their enthusiasm proved to be contagious, and I am grateful for their support and interest. I would also like to thank the contributors for the patience they have shown throughout the various stages of preparation and publication: hundreds of e-mails in all directions have finally paid off. I acknowledge the expert feedback provided by all peer reviewers and the professional assistance received from the John Benjamins editorial team and from series editor Werner Abraham.

This book is dedicated to Zoë Aysha Adam Tan. She calls me daddy, even though I am not her father (my wife is her godmother), and she is the loveliest little girl I know. She has no idea of what linguistics is all about – but she may, one day, take an interest in what daddy has been up to, all those years.

Bert Peeters, University of Tasmania
