# Acknowledgments

Grants from the National Science Foundation, the National Endowment for the Humanities, the University of Colorado, and, most recently, from the Agence National de Recherche through the CorTypo project, allowed me to conduct fieldwork in Nigeria and Cameroon over a period of many years. Erin Shay's editorial work on this volume was supported by the CorTypo project and by the Department of Linguistics, University of Colorado.

Erin Shay has read at least two versions of this work, challenged several of the proposed analyses, pointed out flaws in argumentation, contributed insightful questions, and sometimes offered a more felicitous phrasing, which I have happily accepted. Her contributions, acknowledged throughout the book, were particularly important in Chapter 6 (Methodology), of which she is the co-author. She has also edited this work, hence the authorship 'Zygmunt Frajzyngier with Erin Shay'.

A few elements in the present book stem from my work as a Visiting Fellow at the Research Center for Linguistic Typology at La Trobe University in the fall of 2003. I am most grateful to Bob Dixon and Sasha Aikhenvald for providing me the opportunity to devote the time to research and writing.

Some elements of the monograph have been presented at the Leipzig Congress of the Association of Linguistic Typology, to the members of the CorTypo project and, most recently, at lectures on Empirical Foundations of Linguistics within the LABEX program in Paris (2014). Most elements of this work were presented at a syntax seminar at the University of Colorado at Boulder. Comments and questions from participants in all of those venues were most useful in tightening up the argumentation in various chapters.

Some of the research incorporated in the chapter on methodology was conducted while I held the Pays de la Loire Chaire Régionale de Chercheur Étranger. The work on Wandala was supported by NSF Grant No. 0439940. The Humboldt Foundation Research Award allowed me to collaborate with Mohammed Munkaila, at the University of Bayreuth, on a number of issues in the grammar of Hausa. The fieldwork on issues discussed in Chapter 12 was supported by the University of Colorado Graduate Committee on the Arts and Humanities (GCAH), the Kayden Committee, and the Committee on Research and Teaching in Social Sciences (CARTSS). I am grateful to Zygmunt Saloni for access to the *Sources to the Polish Frequentative Dictionary*.

Without the assistance of speakers of Gidar, Mupun, Pero, Hdi, Lele, Mina, Wandala, and Kafa over a period of many years, this study would not have been possible. Numerous colleagues have shared with me their knowledge, their data, their insights, and their time. In particular I would like to mention Philip Bourdin, Denis Creissels, Antoine Guillaume, Shlomo Izre'el, Il-il Malibert, Amina Mettouchi, Jan Mycielski, Saeko Ogiwara, Graziano Savá, and Erin Shay. Comments from Claude Hagège and Lionel Galand were helpful for the write-up of the final version of Chapter 5. I am also grateful to Amina Mettouchi for her comments and suggestions concerning Chapters 5 and 6. I am grateful to Gilbert Lazard for providing important bibliographical information and, although the solutions proposed in this work differ from his, I am indebted to him for making explicit some of the questions in linguistic typology. Critical readings by Sean Allison and Erin Shay prevented me from taking a wrong path with respect to the analysis of one phenomenon in English. I am most grateful to the anonymous reader of this work and to the series co-editor, Spike Gildea. Their critical and constructive comments allowed me to clarify those elements of the work that may engender readers' misunderstandings, to eliminate some infelicities in terminology, and to clarify the relationship of the proposed approach to other approaches in current use. Spike Gildea also suggested important changes to the title of this work.

None of the people from whom I have benefited so much is in any way responsible for any errors of fact or interpretation.
