

## Contents

	<i>Foreword</i>
4	Hybrid Construction – Timber External Walls
	<i>Principles</i>
7	Application and Construction Variants
11	Sustainability
	<i>Load-bearing Structure and External Wall</i>
19	Load-bearing Structure
22	Manufacturing and Installation Requirements
26	Interface
	<i>Building Physics</i>
33	Thermal Insulation
36	Moisture Protection
37	Air and Windtightness
37	Fire Protection
41	Sound Insulation
	<i>External Wall Joints</i>
49	Horizontal Joints – General Requirements and Guidance
52	Floor Slab Joint, Self-supporting Facade; with Services Cavity
54	Floor Slab Joint, Inserted External Wall Elements; no Services Cavity
56	Floor Slab Joint with Access Balcony
58	Base Joint with Timber Bottom Rail beyond the Splash Water Zone
60	Base Joint at Ground Level
62	Flat Roof Joint
64	Vertical Joints – General Requirements and Guidance
66	Firewalls and Firewall Replacement Walls
	<i>Example Projects</i>
70	“Aktivhaus” – Multistorey Apartment Building in Frankfurt am Main
76	Experimental Residential Buildings in Wuppertal-Ostersiepen
82	“Ecoleben” – Multistorey Residential Buildings in Penzberg
86	35 new Subsidised Housing Units in Freising
	<i>Appendix</i>
93	Editors and Authors
94	Image Credits
94	Standards
95	Subject Index
