

List of Tables

Table 1. The food web matrix of the willow forest, Canada.	13
Table 2. The niche overlap matrix of the willow forest, Canada.	14
Table 3. The dominant clique matrix of the willow forest, Canada.	15
Table 4. Code numbers, sources, and brief titles of the food webs used as data.	29
Table 5. Statistics of the food web versions.	42–43
Table 6. The distribution among community food web versions of the average number of predators per prey, the variance of predators per prey, the average number of prey per predator, and the variance of prey per predator.	49
Table 7. Frequency distributions of lengths of maximal food chains in four food webs.	59
Table 8. The observed frequency of niche overlap in the niche overlap matrix, the mean and variance of the frequency of niche overlap in the niche overlap matrix predicted by six models, and the probabilities under a normal approximation of deviations from the predicted means as large as or larger than those observed.	62–65
Table 9. The estimated fraction of food webs which are interval according to seven models.	77
Table 10. The observed numbers of interval food web versions in 12 sets of food web versions, the corresponding means and standard deviations of the number of interval food webs according to model 6, and one-tailed tests for	

LIST OF TABLES

the excess of the observed over the expected frequency of interval food webs.	79
Table 11. The number of pseudo-random undirected graphs on 10 and on 40 vertices which were interval in 100 Monte Carlo trials, and some exact expected frequencies of interval graphs.	82
Table 12. The observed numbers of interval food web versions in 12 sets of food web versions, the corresponding means and standard deviations of the number of interval food webs according to model 7, and one-tailed tests for the excess of the observed over the expected frequency of interval food webs.	85
Table 13. Frequency distributions of the integers occurring in two sets of 10,000 pseudo-random samples without replacement from the integers 1, 2, 3.	88
