

ACKNOWLEDGMENTS

This project was planned and outlined with Robert L. Fernald and was completed with the help and encouragement of friends and many visiting investigators at the Friday Harbor Laboratories. A.O. Dennis Willows, Director of the Laboratories, generously granted space and facilities for this project, and Kathryn Hahn and Joan Short gave efficient and cheerful administrative assistance while the text was written and set into camera-ready copy. Craig Staude and David Duggins collected subtidal specimens, and Craig Staude and David Wethey patiently solved problems with computers and programs. Thomas Moritz, Kathy Carr, and the staffs of the Natural Sciences Library and Fisheries and Oceanographic Library at the University of Washington, and Alan Varley, Elizabeth Roberts, and the staff of the Marine Biological Association Library at Plymouth, England, were very helpful during extensive literature searches. Eugene N. Kozloff clarified points of synonymy, syntax, and spelling. Richard Strathmann reviewed many of the chapters and provided encouragement and help throughout the project.

Figures for Chapters 24, 28, and 30 were prepared by C. G. Reed, F. S. McEuen, and R. A. Cloney, respectively; other figures were prepared by M.F. Strathmann.

This project received support from NIH Animal Resource Grant 3 P40 RR01599-02S1 to Robert L. Fernald (1982-1983) and to Richard Strathmann (1983-1987).
