Preface	xv
Chapter 1. Introduction	1
1.1 An Overview of Classical Thermodynamics	1
1.2 Thermodynamics and the Arrow of Time	15
1.3 Modern Thermodynamics, Information Theory, and Statistical Energy Analysis	19
1.4 Dynamical Systems	25
1.5 Dynamical Thermodynamics: A Postmodern Approach	29
1.6 A Brief Outline of the Monograph	34
Chapter 2. Dynamical Systems Theory	39
2.1 Notation, Definitions, and Mathematical Preliminaries	39
2.2 Stability Theory for Nonnegative Dynamical Systems	45
2.3 Invariant Set Stability Theorems	48
2.4 Semistability of Nonnegative Dynamical Systems	54
2.5 Stability Theory for Linear Nonnegative Dynamical Systems	63
2.6 Lyapunov Analysis for Continuum Dynamical Systems Defined by Semigroups	71
2.7 Reversibility, Irreversibility, Recoverability, and Irrecoverability	78
2.8 Output Reversibility in Dynamical Systems	85
2.9 Reversible Dynamical Systems, Volume-Preserving Flows, and Poincaré Recurrence	96
2.10 Poincaré Recurrence and Output Reversibility in Linear Dynamical Systems	106
Chapter 3. A Dynamical Systems Foundation for Thermodynamics	115
3.1 Introduction	115
3.2 Conservation of Energy and the First Law of Thermodynamics	117
3.3 Entropy and the Second Law of Thermodynamics	126
3.4 Ectropy and the Second Law of Thermodynamics	143

3.5	Semistability, Energy Equipartition, Irreversibility, and the Arrow of Time	151
3.6	Entropy Increase and the Second Law of Thermodynamics	162
3.7	Interconnections of Thermodynamic Systems	165
3.8	Monotonicity of System Energies in Thermodynamic Processes	171
3.9	The Second Law as a Statement of Entropy Increase	175
3.10	Thermodynamic Systems with Linear Energy Exchange	180
3.11	Semistability and Energy Equipartition in Linear Thermodynamic Models	185
3.12	Semistability and Energy Equipartition of Thermodynamic Systems with Directed Energy Flow	189
Chapter 4. Temperature Equipartition and the Kinetic Theory of Gases		199
4.1	Semistability and Temperature Equipartition	199
4.2	Boltzmann Thermodynamics	206
4.3	Connections to Classical Thermodynamic Energy, Entropy, and Thermal Equilibria	209
Chapter 5. Work, Heat, and the Carnot Cycle		223
5.1	On the Equivalence of Work and Heat: The First Law Revisited	223
5.2	Work Energy, Gibbs Free Energy, Helmholtz Free Energy, Enthalpy, and Entropy	234
5.3	The Carnot Cycle and the Second Law of Thermodynamics	242
Chapter 6. Mass-Action Kinetics and Chemical Thermodynamics		247
6.1	Introduction	247
6.2	Reaction Networks	249
6.3	The Law of Mass Action and the Kinetic Equations	251
6.4	Nonnegativity of Solutions	255
6.5	Realization of Mass-Action Kinetics	257
6.6	Reducibility of the Kinetic Equations	260
6.7	Stability Analysis of Linear and Nonlinear Kinetics	264
6.8	The Zero-Deficiency Theorem	268
6.9	Chemical Equilibria, Chemical Potential, and Chemical Thermodynamics	281
Chapter 7. Finite-Time Thermodynamics		289
7.1	Introduction	289
7.2	Finite-Time Semistability of Nonlinear Nonnegative Dynamical Systems	290
7.3	Homogeneity and Finite-Time Semistability	294

7.4	Finite-Time Energy Equipartition in Thermodynamic Systems	302
Chapter 8. Critical Phenomena and Continuous Phase Transitions		307
8.1	Introduction	307
8.2	Dynamical Systems with Discontinuous Vector Fields	309
8.3	Nonsmooth Stability Theory for Discontinuous Dynamical Systems	312
8.4	Energy Equipartition for Thermodynamic Systems with Discontinuous Power Balance Dynamics	324
Chapter 9. Thermodynamic Modeling of Discrete Dynamical Systems		331
9.1	Introduction	331
9.2	Mathematical Preliminaries	332
9.3	Conservation of Discrete Energy and the First Law of Thermodynamics	343
9.4	Nonconservation of Discrete Entropy and the Second Law of Thermodynamics	347
9.5	Nonconservation of Discrete Entropy	354
9.6	Semistability of Discrete-Time Thermodynamic Models	359
9.7	Discrete Energy Equipartition	365
9.8	Entropy Increase and the Second Law of Thermodynamics	365
9.9	Discrete Temperature Equipartition	367
9.10	Discrete Thermodynamic Models with Linear Energy Exchange	372
Chapter 10. Critical Phenomena and Discontinuous Phase Transitions		383
10.1	Introduction	383
10.2	Stability Theory for Nonlinear Hybrid Nonnegative Dynamical Systems	384
10.3	Hybrid Thermodynamic Models	398
10.4	Conservation of Energy and the Hybrid First Law of Thermodynamics	403
10.5	Entropy and the Hybrid Second Law of Thermodynamics	409
10.6	Semistability and Energy Equipartition of Hybrid Thermodynamic Systems	414
Chapter 11. Continuum Thermodynamics		421
11.1	Conservation Laws in Continuum Thermodynamics	421
11.2	Entropy and Entropy for Continuum Thermodynamics	431
11.3	Semistability and Energy Equipartition in Continuum Thermodynamics	443

11.4	Advection-Diffusion Dynamics	458
Chapter 12. Stochastic Thermodynamics: A Dynamical Systems Approach		461
12.1	Introduction	461
12.2	Stochastic Dynamical Systems	464
12.3	Stability Theory for Stochastic Nonnegative Dynamical Systems	471
12.4	Semistability of Stochastic Nonnegative Dynamical Systems	479
12.5	Conservation of Energy and the First Law of Thermodynamics: A Stochastic Perspective	489
12.6	Entropy and the Second Law of Thermodynamics	499
12.7	Stochastic Semistability and Energy Equipartition	518
Chapter 13. Relativistic Mechanics		523
13.1	Introduction	523
13.2	Relativistic Kinematics	531
13.3	Length Contraction and Time Dilation	540
13.4	Relativistic Velocity and Acceleration Transformations	542
13.5	Special Relativity, Minkowski Space, and the Spacetime Continuum	545
13.6	Relativistic Dynamics	552
13.7	Force, Work, and Kinetic Energy	555
13.8	Relativistic Momentum, Energy, Mass, and Force Transformations	558
13.9	The Principle of Equivalence and General Relativity	560
Chapter 14. Relativistic Thermodynamics		567
14.1	Introduction	567
14.2	Special Relativity and Thermodynamics	572
14.3	Relativity, Temperature Invariance, and the Entropy Dilation Principle	581
14.4	General Relativity and Thermodynamics	587
Chapter 15. Thermodynamic Models with Subluminal Heat Propagation Speeds		591
15.1	Introduction	591
15.2	Lyapunov Stability Theory for Time Delay Nonnegative Dynamical Systems	594
15.3	Invariant Set Stability Theorems	598
15.4	Linear and Nonlinear Nonnegative Dynamical Systems with Time Delay	602
15.5	Conservation of Energy for Thermodynamic Systems with Time Delay	608

15.6	Semistability and Equipartition of Energy for Linear Thermodynamic Systems with Time Delay	610
15.7	Semistability and Equipartition of Energy for Nonlinear Thermodynamic Systems with Time Delay	614
15.8	Monotonicity of System Energies in Thermodynamic Processes with Time Delay	628
Chapter 16. Conclusion		633
Chapter 17. Epilogue		641
17.1	Introduction	641
17.2	Thermodynamics of Living Systems	643
17.3	Thermodynamics and the Origin of Life	650
17.4	The Second Law, Entropy, Gravity, and Life	653
17.5	The Second Law, Health, Illness, Aging, and Death	656
17.6	The Second Law, Consciousness, and the Entropic Arrow of Time	659
17.7	Conclusion	666
Chapter 18. Afterword		671
Bibliography		677
Index		711
