Preface	v
List of Symbols	ix
1. Introduction	3
1.1 Man as a cultural animal	3
1.2 The adaptiveness of behavior	4
1.3 Levels of learning	6
1.4 Innate and learned traits	7
1.5 Culture as the object of evolution	10
1.6 The measurement of selection in biology	11
1.7 Two levels of selection and two orders of organ- isms	14
1.8 Some examples from the evolution of languages	19
1.9 The diffusion of innovations	29
1.10 Epidemics	46
1.11 Cultural transmission	53
1.12 Transmission as a two-stage process	62
1.13 A summary of evolutionary factors in culture	65
1.14 Some caveats and problems	69
2. Vertical Transmission	77
2.1 Introduction	77
2.2 Vertical transmission	78
2.3 Special cases of vertical transmission	84
2.4 Correlations between relatives	91
2.5 Assortative mating	95
2.6 Natural selection	101
2.7 Mutation	107
2.8 Random-sampling drift	109

2.9	Drift and natural selection	121
2.10	Concluding remarks on vertical transmission	124
3.	Oblique and Horizontal Transmission	130
3.1	Oblique transmission	130
3.2	Oblique and vertical transmission with natural selection	133
3.3	Sex-influenced transmission	143
3.4	Horizontal transmission	151
3.5	Sib-sib interactions	154
3.6	Migration between populations	157
3.7	Migration dependent on extent of separation	173
3.8	Population stratification	177
3.9	The recent demographic transition as an example of stratified, vertical and oblique or horizontal transmission in cultural change	180
3.10	Random sampling drift: Vertical and oblique transmission	189
3.11	A comparison of special schemes of transmission with random sampling drift: parents versus teachers	192
3.12	Kinetics of cultural change with oblique and horizontal transmission	202
3.13	Variation among populations	204
3.14	Correlation of cultural and biological variation	216
4.	Multiple State Traits	219
4.1	Mendelian transmission as an example of a multiple state trait	219
4.2	Vertical transmission for three-state models	222
4.3	Numerical examples of multistate transmission	238

4.4	Assortative mating	245
4.5	Horizontal and oblique transmission	251
4.6	The evolution of surnames: An example of drift in multistate cultural transmission	255
5.	Cultural Transmission for a Continuous Trait	267
5.1	Historical considerations on “blending” inheritance	267
5.2	Linear transmission	275
5.3	Correlations between relatives	279
5.4	Multivariate linear models	286
5.5	Social stratification, class, and caste	293
5.6	Natural selection, range attenuation, and their effects on the correlations between relatives	300
5.7	Mutation and cultural drift for continuous traits	307
5.8	Upper limits to individual variation under cultural drift	314
5.9	Variation between groups	317
5.10	Cultural selection versus cultural drift	319
5.11	Simple social hierarchies and compartments	332
5.12	Transmission matrices as models of vertical and oblique transmission: Teachers vs. parents	334
6.	Epilogue	340
6.1	General considerations	340
6.2	Harmony and conflict of cultural and natural selection	342
6.3	Cultural transmission, communication, and cultural selection	346
6.4	Modes of transmission and their consequences for rates and equilibria under cultural evolution	351

6.5	Chance and purpose in cultural variation	357
6.6	Overlaps with other areas of study	359
6.7	Individual selection and group selection	361
6.8	Cultural activity as an extension of Darwinian fitness	362
	Bibliography	367
	Index	383
