

## LIST OF FIGURES

Figure 2.1	A very simple computer program, written in the language Pascal	7
Figure 2.2	A Pascal procedure which will convert any temperature in Fahrenheit into Celsius	8
Figure 2.3	An equivalent program to that in Figure 2.1, but this one uses the <i>FtoC</i> procedure from Figure 2.2	9
Figure 2.4	The same program as in Figure 2.1, but with different names and formatting	12
Figure 2.5	Sample instruction from a recipe book, written at a <i>high level</i>	23
Figure 2.6	Fragment of an instruction from a recipe book written at a <i>low level</i> but presenting the equivalent instruction to that in Figure 2.5	24
Figure 2.7	A fragment of a program written in assembly code	24
Figure 2.8	The waterfall model of software development	33
Figure 3.1	The architecture found on most computers, often referred to as the von Neumann architecture	38
Figure 4.1	A graphic, composed of polygons	62
Figure 4.2	Characterisation of the sounds that can be used in human-computer interactions	63
Figure 4.3	The conventional relationship between hardware and software	65
Figure 4.4	Middleware forms an interface between different computers on a network	68

Figure 5.1	A representation of the law of supply and demand	83
Figure 5.2	HTML code of a webpage that would appear as in Figure 5.3 when viewed in a browser	90
Figure 5.3	How the HTML page shown in Figure 5.2 might appear in a web browser, such as Internet Explorer or Firefox	91
Figure 6.1	Comparison between different growth rates of complexity measures	105
Figure 7.1	The structure of a relational database	114
Figure 11.1	The ‘spectrum’ of projects	169

## LIST OF TABLES

Table 5.1	HTML markup ‘tags’ used in Figure 5.2	91
Table 9.1	UCAS Tariff points values for different UK grades	146
Table 12.1	Honours degree classes and the marks to which they correspond	174
