Acknowledgements x

1 Introduction 1
1.1 Why Use Perl? 4
1.2 The Command Prompt/Console 6
1.3 How to Navigate a File System 8
1.3.1 Understanding File System Hierarchies 8
1.3.2 Navigating Through File Systems 9
1.4 Plain Text Editors 11
1.5 Installing Perl and Perl/Tk on Your Computer 12
1.5.1 Installing Perl 12
1.5.2 Installing the Perl/Tk Toolkit 12

2 Basic Programming Concepts – 1 14
2.1 How to Issue Instructions (Statements) 14
2.2 How to Store Data in Memory (Variables) 16
2.3 What to Store and How (Basic Data Types) 17
2.3.1 Scalars 18
2.3.2 Arrays 20
2.3.3 Hashes 24
2.4 Understanding About Defaults (Special Variables) 27
2.5 Making Your Code More Intelligible (Comments) 28

3 Basic Programming Concepts – 2 30
3.1 Making Decisions (Flow Control) 30
3.2 Doing Repetitive Tasks Automatically (Basic *for* Loops) 34
3.2.1 The *for* Loop 34
3.2.2 Iterating Over Array Elements 37
3.2.3 The *foreach* Loop 38
3.3 More Repetitiveness (Further Loops) 42
3.3.1 The *while* Loop 42

3.3.2 The *until* Loop 44
3.3.3 Controlling Loops Further 44

4 Working with Text (Basic String Handling) 48
4.1 Chomping and Chopping 48
4.2 Extracting a Substring from a Longer String 50
4.3 'Adding' Strings Together 52
4.4 Establishing the Length of a String 53
4.5 Handling Case 54

5 Working with Stored Data (Basic File Handling) 56
5.1 Opening a Filehandle 56
5.2 Tweaking Your Input and/or Output Options 58
5.3 Reading from a Filehandle 58
5.3.1 File Processing in List Context 59
5.3.2 File Processing in Line Context 60
5.3.3 Slurping in Scalar Context 61
5.4 Default Filehandles 61
5.5 Writing to a Filehandle 62
5.6 Working with Directories 62

6 Identifying Textual Patterns (Basic and Extended Regular Expressions) 69
6.1 Matching 69
6.2 Character Classes 70
6.3 Quantification 73
6.4 Grouping, Alternation and Anchoring 75
6.5 Memorising 76
6.6 Modifiers 77
6.7 Extended Regular Expressions 77

7 Modifying Textual Patterns (Substitution and Transliteration) 80
7.1 Substitution 80
7.2 Greediness 84
7.3 A Very Brief Introduction to Markup Languages (SGML, HTML and XML) 85
7.4 Transliteration 88

8 Getting Things Into the Right Order (Basic Sorting) 91
8.1 Keys and Sort Order 92
8.2 'Vocabulary Handling' (Creating Simple Word Lists) 93

9 Elementary Texts Stats (Creating Basic Frequency Lists) 95
9.1 Complex Sorting 95
9.2 Word Frequency Lists 96

9.3 Implementing a List 96
9.4 Sorting and Printing the List 97

10 More Repetitiveness or How to Tie Things Together (Introducing Modularity) 99
10.1 Functions and Subroutines 99
10.1.1 Creating Your Own Subroutines 100
10.1.2 Calling a Subroutine 101
10.1.3 Localising Variables and Being Strict With Yourself 102
10.2 References and Modules 104
10.2.1 Basic Named References 104
10.2.2 Anonymous References 106
10.2.3 What Do Modules Look Like? 108
10.2.4 Importing and Using Modules 109
10.2.5 Writing a Simplistic HTML Page Downloader and Parser 110

11 Objects 115
11.1 OO Concepts 115
11.2 Creating an Object in Perl 116
11.3 Creating a Regular Verb Object 116
11.4 Instantiating the Verb Object 118
11.5 Creating Appropriate Accessor Methods 119

12 Getting Graphical (Simple User Interfaces) 121
12.1 Elements of a GUI 121
12.2 Basic Steps in Creating Tk Programs 122
12.3 Adding Widgets 123
12.4 The GUI Concordancer – An Advanced Example 129
12.4.1 Adding a Menu Bar and the Remaining GUI Elements 130
12.4.2 Programming the Functionality 132
12.4.3 Handling the Text Widget 134

13 Conclusion 137

Appendix A – Sample Solutions 139
Appendix B – How to Get Further Help on Perl 167
