

Contents

Preface	xi
1. Space–Time Population Genetics	1
2. Geographical Patterns Observed in Nature	11
Standard Patterns of Genetic Isolation by Distance	14
Directional Patterns	25
Complex Paths of Migration	31
Other Complexities of Migration Processes	34
Effects of Temporal Changes on Spatial Patterns	36
Spatial Patterns Caused by Selection	37
Partition of Genetic Variation	40
3. Ancient Events in Spatial–Temporal Processes	43
Out of Africa	45
Patterns Caused by More Recent Expansions of Human Populations	63
Patterns in Other Species	64
4. Spatial and Space–Time Statistics	67
Spatial Autocorrelation Statistics	68
Moran's I Statistic	71
Correlograms	77
Mantel Tests for Correlations of Genetic Distance with Geographic Distance	79
Measures of Geographic Distances and Special Weighting Schemes	81
Directional Autocorrelation and Special Weighting Schemes	84
Spatial Statistics for Localized and Systemic Spatial Nonstationarity	87
Multiple Genetic Characters	92

Spatial Models and Statistical Analyses of Spatial Patterns	95
Space–Time Analysis	99
Measures of Kinship	106
Measures of Overall Degree of Genetic Differentiation of a System	107
Other Estimators	110
5. Theory of Genetics as Stochastic Spatial–Temporal Processes	114
Spatial Probabilities of Identity by Descent	116
Spatial and Space–Time Genetic Correlations	124
Stochastic Migration	136
Negatively Shared Stochastic Migration Effects	147
Migration Matrices	148
<i>F</i> Statistics and Wright’s Island Model	149
Space–Time Probabilities of Identity by Descent	152
Space–Time Coalescence Probabilities	158
Heterozygosity	160
Mutation Models	160
Clines	164
Population Expansions	167
Multilocus Processes	168
Theoretical Dispersal Curves	170
6. Synthesis: Tying Spatial Patterns among Populations to Space–Time Processes	172
7. Spatial Patterns Observed within Populations	183
Standard Forms of Genetic Isolation by Distance	185
Spatial Autocorrelation Observed within Populations—Moran’s <i>I</i> Statistics	192
Observed Join-Count Statistics	209
Values for Other Measures	217
Biparental Inbreeding Caused by Spatial Structure and Its Interaction with Inbreeding Depression and Selection	220

The Roles of Demographic Factors in Spatial Structure	223
Using Spatial Patterns to Detect Natural Selection	233
8. Statistical Methods for Spatial Structure	
within Populations	244
Distribution Theory for Join Counts	245
Moran's <i>I</i> Statistics in Terms of Join Counts	252
Statistical Properties of Join-Count Statistics	255
Statistical Properties of Moran's <i>I</i> Statistics for Quadrats	267
Statistical Properties of Moran's <i>I</i> Statistics for Individual Genotypes	268
Covariances of Moran's <i>I</i> for Converted Individual Genotypes of Multiallelic Loci	272
Multiple-Locus Estimators	279
<i>F</i> Statistics	280
Measures of Kinship	284
9. Theory of Spatial Structure within Populations	288
Genealogies and Identity by Descent	288
Kinship and A Priori Covariance	299
Relationship of Various Measures of Observable Spatial Covariances to the Theoretic Values	301
Wright's View	305
Mechanistic Models of Dispersal	308
10. Emerging Study	317
Emerged Conclusions	317
Future Studies	323
Literature Cited	329
Index	353
