|                                                            |    |
|------------------------------------------------------------|----|
| PREFACE                                                    | XI |
| PART ONE THE WORLD OF ICE: PAST AND PRESENT                | 1  |
| Chapter 1 The Ice on Our Planet                            | 3  |
| <i>Snow and Ice: A Multifaceted World</i>                  | 3  |
| <i>Mountain Glaciers and Ice Caps</i>                      | 5  |
| <i>Polar Regions: The Omnipresence of the White Planet</i> | 7  |
| <i>Greenland, Antarctica, and Ice Shelves</i>              | 10 |
| <i>Ice: An Agent and Indicator of Climate Change</i>       | 14 |
| <i>The White Planet and Sea Levels</i>                     | 16 |
| Chapter 2 From Exploration to Scientific Observation       | 18 |
| <i>The Flow of Mountain Glaciers</i>                       | 19 |
| <i>Mass Balance: The Health of a Glacier</i>               | 21 |
| <i>The Arctic Ocean in the Time of the Explorers</i>       | 23 |
| <i>The Arctic Ocean: Vulnerable Ice</i>                    | 25 |
| <i>Greenland: An Island Inhabited for Millennia</i>        | 28 |
| <i>Greenland: An Increasingly Negative Mass Balance</i>    | 28 |
| <i>Antarctica: A Much More Recent Exploration</i>          | 31 |
| <i>Antarctica: A Long Uncertain Mass Balance</i>           | 34 |
| Chapter 3 Ice through the Ages                             | 37 |
| <i>The Time of the Pioneers</i>                            | 37 |
| <i>Ice of Long Ago</i>                                     | 40 |
| <i>Glaciations of the Quaternary and Astronomic Theory</i> | 46 |
| PART TWO POLAR ICE: AMAZING ARCHIVES                       | 51 |
| Chapter 4 Reconstructing the Climates of the Past          | 53 |
| <i>The Round of Isotopes</i>                               | 54 |
| <i>Going Back in Time</i>                                  | 57 |
| <i>The Recent Period</i>                                   | 57 |
| <i>The Distant Past</i>                                    | 60 |
| <i>Paleoceanography</i>                                    | 61 |
| <i>Continental Archives</i>                                | 62 |

|                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------|-----|
| <i>Dating Oceanic and Continental Archives</i>                                                      | 64  |
| <i>A Cornucopia of Results</i>                                                                      | 66  |
| Chapter 5    Glacial Archives                                                                       | 68  |
| <i>The Long Story of a Snowflake</i>                                                                | 68  |
| <i>The Ice and Its Isotopes: A Paleothermometer</i>                                                 | 70  |
| <i>Impurities with Multiple Sources</i>                                                             | 71  |
| <i>Air Bubbles in the Ice: A Very Beautiful Story</i>                                               | 73  |
| <i>The Headaches of Dating</i>                                                                      | 77  |
| Chapter 6    The Campaigns                                                                          | 82  |
| <i>Camps Century and Byrd: The First Deep Ice Core Drillings</i>                                    | 82  |
| <i>Fifty Years Ago: The French on the Polar Ice</i>                                                 | 86  |
| <i>The First Drilling at Dôme C: Success of the French Team</i>                                     | 88  |
| <i>Rapid Climate Variations: Initial Inklings</i>                                                   | 91  |
| <i>Vostok: A Collaboration between French and Soviet Teams</i>                                      | 92  |
| <i>Europe and the United States: Two Drilling Operations in the Center<br/>        of Greenland</i> | 96  |
| <i>Europe Turns to Antarctica</i>                                                                   | 98  |
| <i>Vostok: More than 3,600 Meters of Ice</i>                                                        | 101 |
| <i>Other Core Drilling in Antarctica</i>                                                            | 103 |
| <i>The Glaciers of the Andes and the Himalaya</i>                                                   | 105 |
| <i>A Return to Greenland</i>                                                                        | 106 |
| <i>The European EPICA Drilling: A Double Success beyond All Hopes</i>                               | 108 |
| Chapter 7    Vostok: The Cornucopia                                                                 | 110 |
| <i>A Complete Glacial-Interglacial Cycle</i>                                                        | 112 |
| <i>Climate and Greenhouse Effect Go Hand in Hand</i>                                                | 113 |
| <i>Much More Information</i>                                                                        | 118 |
| <i>A Huge Lake under the Ice</i>                                                                    | 120 |
| Chapter 8    Dôme C: 800,000 Years and the Revolution of the<br>Rhythm of Glaciations               | 122 |
| <i>Ice Older than That at Vostok</i>                                                                | 123 |
| <i>Inversion of the Magnetic Field</i>                                                              | 126 |
| Chapter 9    Rapid Climatic Variations                                                              | 130 |
| <i>The First Indications</i>                                                                        | 130 |
| <i>Increasingly Clear Indications</i>                                                               | 132 |
| <i>A Connection with Ocean Circulation?</i>                                                         | 133 |

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| <i>Confirmation</i>                                                                 | 134 |
| <i>Rapid Events during a Warm Period?</i>                                           | 139 |
| <i>Initially Underestimated Changes in Temperature</i>                              | 142 |
| <i>The Connection with the Ocean Henceforth Demonstrated</i>                        | 143 |
| <i>Consequences on a Planetary Scale</i>                                            | 147 |
| Chapter 10 The Last 10,000 Years: An Almost Stable Climate                          | 149 |
| <i>Volcanism and Solar Activity: Natural Climatic Forcings</i>                      | 150 |
| <i>How Long Has Human Activity Been Changing the Composition of the Atmosphere?</i> | 152 |
| PART THREE THE WHITE PLANET TOMORROW                                                | 157 |
| Chapter 11 The Climate and Greenhouse Gases                                         | 159 |
| <i>The Greenhouse Effect: A Truly Beneficial Natural Phenomenon</i>                 | 159 |
| <i>The Greenhouse Effect Due to Human Activity: A Slow Awareness</i>                | 163 |
| <i>How Did We Get to This Point?</i>                                                | 168 |
| Chapter 12 Have Humans Already Changed the Climate?                                 | 173 |
| <i>The Time of the Pioneers</i>                                                     | 173 |
| <i>The Awareness</i>                                                                | 174 |
| <i>The Establishment of the IPCC</i>                                                | 177 |
| <i>The Problem of Aerosols</i>                                                      | 180 |
