Acknowledgments	ix
1. History of This Investigation and Structure of This Book	1
1.1 Introduction	1
1.2 History of This Research	4
1.3 Consanguinity	9
1.4 Inbreeding Measurement	11
1.5 Inbreeding Effects	13
1.6 Random Genetic Drift	18
1.7 Research on Drift in the Parma Valley	20
1.8 Genetic Uses of Surnames	21
1.9 A Summary of Published Studies on Consanguinity and Inbreeding, with Special Reference to Italy	24
1.10 Structure of This Book	26
2. Customs and Legislation Affecting Consanguineous Marriages, with Special Attention to the Catholic Church	29
2.1 Early and Medieval Christian Tradition	29
2.2 Traditional Methods of Consanguinity Evaluation: The Roman and the German Methods	34
2.3 Justifications of the Dispensation Request	35
3. Demographic Factors Affecting the Frequencies of Consanguineous Marriage—A Study in Northern Emilia	39
3.1 Nature and Interest of the Problem	39
3.2 Relations to Population Structure	40

3.3	Number of Sibs, Distribution of Family Sizes, and Observed Abundance of Relatives	43
3.4	Consanguinity Degrees and Observed Numbers of Consanguinity Dispensations in Northern Emilia	47
3.5	Pedigree Types, Pedigree Codes, and Proofs of the Influence of Age at Marriage and of the Sex of Intermediate Ancestors	52
4.	Probability of Consanguineous Marriages	69
4.1	Theory of Age Effects on the Frequency of Consanguineous Marriages	69
4.2	Migration as a Factor Affecting the Frequency of Consanguineous Marriages	76
4.3	The Role of Women in Maintaining Family Ties among Relatives	78
4.4	Observed and Expected Frequencies of Major Consanguinity Degrees	83
5.	Consanguinity, Inbreeding, and Observed Genetic Drift in the Parma Valley	90
5.1	The Parma Valley and the Origin of This Investigation	90
5.2	Geography of the Parma Valley	91
5.3	Consanguinity and Inbreeding in the Parma Valley	95
5.4	Blood Groups and Genetic Drift	101
5.5	Surnames and Genetic Drift	115
5.6	Correlations of Inbreeding and Drift	118
6.	A Computer Simulation of the Upper Parma Valley Population	122
6.1	The Need for a Population Simulation	122
6.2	Structure of the Simulation	123
6.3	The Migration Matrix	129
6.4	Is Drift the Only Cause of Genetic Variation in the Parma Valley?	134
6.5	Expected and Observed Consanguinity	142

7. Islands	149
7.1 Italian Islands	149
7.2 Sardinia	149
7.3 Sicily	175
7.4 Aeolian Islands	183
8. Effects of Inbreeding on Normal and Pathological Phenotypes	192
8.1 Introduction	192
8.2 Normal Quantitative Phenotypes: Stature and Chest Girth	193
8.3 Mortality, Fertility, and Sterility	196
8.4 Incidence of Disease Groups from Surveys of Hospital Populations	199
8.5 Study of Specific Recessive Diseases	204
9. Consanguineous Marriages in Italy: Data from the Vatican Archives	211
9.1 Introduction	211
9.2 Variations of Consanguinity over Time	212
9.3 Geographical Variations: Provinces and Regions	214
9.4 Space–Time Analysis: Four Models of Declining Consanguinity in Italian Regions	215
9.5 Factors Responsible for Space and Time Differences in Consanguinity: Choice of Variables and Their Meaning	222
9.6 Demographic Variables: Birthrate, Death Rate, and Demographic Transition	223
9.7 Effect on Consanguinity of Environmental Variables of Socioeconomic and Ecological Meaning	229
9.8 An Attempt at a General Synthesis	237
10. Geography of Demes in Italy	242
10.1 Population Sampling	242
10.2 Random Mating, Mendelian Populations, and Demes	246

10.3	Comparing Genetic and Demographic Approaches to the Study of Demes	252
10.4	Are <i>comuni</i> (Communes) Demes?	260
10.5	The Negative Correlation Between N and m	263
10.6	Using Surnames for Evaluating Drift	267
10.7	A Drift Map of Italy by Communes	274
10.8	Statistical Observations on the Italian Drift Map	280
11.	Conclusions	284
11.1	Human Consanguinity	284
11.2	Inbreeding	291
11.3	Genetic Drift	293
11.4	Demes, Isolates, and Migration	298
	Bibliography	303
	Index	313
