Preface	v
Chapter I. Algebraic Foundations	
§ 1. Preliminaries	3
§ 2. Resultants and elimination	5
§ 3. Algebraic dependence. Transcendency	6
§ 4. Extension of the groundfield	7
§ 5. Differentials (characteristic zero)	10
Chapter II. Algebraic Varieties: Fundamental Concepts	
§ 1. Affine and projective spaces	16
§ 2. Algebraic varieties and their ideals	21
§ 3. General points. Dimension. Function field	26
§ 4. Projections	33
§ 5. Differentials. Singular points. Tangent spaces (ground- field of characteristic zero)	35
§ 6. Some intersection properties	40
Chapter III. Transformations of Algebraic Varieties	
§ 1. Rational transformations	47
§ 2. Birational transformations	49
§ 3. Normal systems.	53
§ 4. Product spaces	61
§ 5. Algebraic correspondences	64
§ 6. Complements on intersections.	72
§ 7. Appendix: Groundfield of characteristic $p \neq 0$	74
Chapter IV. Formal Power Series	
§ 1. Basic concepts and theorems	78
§ 2. Algebroid varieties	81
§ 3. Local properties of algebraic varieties	89
§ 4. Algebraic varieties as topological spaces	96

Chapter V. Algebraic Curves, their Places and Transformations

§ 1. Formal power series in one and two variables	98
§ 2. Puiseux's theorem	99
§ 3. The places of an algebraic curve	104
§ 4. Valuations	108
§ 5. Multiple points, intersections and the places	112
§ 6. Rational and birational transformations and the places	117
§ 7. Space curves	121
§ 8. Reduction of singularities	127

Chapter VI. Linear Series

§ 1. Divisors and their classes	135
§ 2. Linear series: First properties	137
§ 3. Birational models and linear series	142
§ 4. Rational, elliptic and hyperelliptic curves	144
§ 5. Adjoint curves and series	145
§ 6. The theorem of Riemann-Roch	149

Chapter VII. Abelian Differentials

§ 1. Preliminary questions	155
§ 2. The divisors of the differentials. Differentials of the first kind	158
§ 3. Elliptic and hyperelliptic differentials. Canonical model	160
§ 4. Differentials of the second and third kinds	165
§ 5. Jacobian series	172

Chapter VIII. Abel's Theorem. Algebraic Series and Correspondences

§ 1. Abel's theorem	176
§ 2. Algebraic series	178
§ 3. Algebraic correspondences between two curves	181
§ 4. Algebraic correspondences of a curve with itself	189
§ 5. Products of correspondences	194

Chapter IX. Systems of Curves on a Surface

§ 1. Generalities on the curves on a surface	196
§ 2. Differentials of the surface Φ	201
§ 3. Simple differentials	203
§ 4. Double differentials	205

CONTENTS

ix

§ 5. Algebraic dependence of curves on a surface according to Severi	216
§ 6. Surface product of two curves. Application to correspondences	220
§ 7. Birational invariance	222
Appendix	224
Bibliography	226
List of symbols most frequently used in the text	229
Index	230
