<i>Preface</i>	xv
<i>Acknowledgments</i>	xix
Chapter 1: Introduction to Steel Structures	1
1-1 Introduction	1
1-2 The Manufacture of Structural Steel	2
1-3 Properties of Structural Steel	3
1-4 Structural Steel Shapes and ASTM Specification	20
1-5 Basic Structural Steel Elements	36
1-6 Types of Structural Systems in Steel Buildings	38
1-7 Building Codes, Design Specifications, and the Steel Construction Manual	47
1-8 The Structural Steel Design and Construction Process	49
1-9 Gravity and Lateral Load Paths and Structural Redundancy	50
1-10 Roof and Floor Framing Layout, Deck Selection, and Fireproofing	53
1-11 Sustainability in the Design and Construction of Steel Structures	59
1-12 Design Constraints	61
References	62
Exercises	64
Chapter 2: Design Methods, Load Combinations, and Gravity Loads and Load Paths	71
2-1 Introduction to Design Methods	71
2-2 Strength Reduction or Resistance Factors	78
2-3 Load Factors and Load Combinations	79
2-4 Introduction to Structural Design Loads	93
2-5 Gravity Loads in Building Structures	94

2-6	Dead Loads	94
2-7	Live Loads	98
2-8	Floor Live Loads	99
2-9	Floor Live Load Reduction	100
2-10	Roof Live Load	103
2-11	Snow Load	122
2-12	Rain Loads	130
2-13	Ice Loads Due to Freezing Rain	133
2-14	Miscellaneous Loads	137
2-15	Vertical and Lateral Deflection, and Lateral Acceleration Criteria	141
2-16	Demand-to-Capacity Ratio	145
	References	145
	Exercises	147
Chapter 3:	Lateral Loads and Lateral Force-Resisting Systems	155
3-1	Lateral Loads on Buildings	155
3-2	Lateral Force-Resisting Systems in Steel Buildings	163
3-3	Wind Loads	169
3-4	Calculation of Wind Loads on Building Structures	170
3-5	Effect of Net Factored Uplift Loads on Roof Beams, Joists, and Entrance Canopies	189
3-6	Wind Loads on Parapets, Roof Screen Walls, and Rooftop Equipment	191
3-7	Designing for Tornadoes	193
3-8	Calculation of Seismic Loads	193
3-9	Seismic Analysis of Buildings Using the ASCE 7 Load Standard	197
3-10	Equivalent Lateral Force (ELF) Method	199
3-11	Vertical Distribution of Seismic Base Shear, V	206
3-12	Story Drift and Structural Separation Due to Seismic Lateral Forces	209
3-13	Two-Stage Seismic Analysis for Podium Structures	210
3-14	Foundation Ties in Seismic Design	213
3-15	Structural Detailing Requirements for Seismic Design	213
	References	219
	Exercises	220
Chapter 4:	Tension Members	229
4-1	Introduction	229
4-2	Failure Modes and Analysis of Tension Members	231
4-3	Design of Tension Members	256
4-4	Tension Rods	267

	References	274
	Exercises	275
Chapter 5:	Compression Members Under Concentric Axial Loads	287
	5-1 Introduction	287
	5-2 Euler Critical Buckling Load	293
	5-3 Compression Member Strength	300
	5-4 Local Buckling of Compression Members	302
	5-5 Analysis Procedures for Compression Members	308
	5-6 Design Procedures for Compression Members	316
	5-7 Alignment Charts or Nomographs	323
	5-8 Torsional and Flexural-Torsional Buckling of Compression Members	332
	5-9 Single Angle Members Under Eccentric Compression Loads	351
	References	356
	Exercises	356
Chapter 6:	Flexural Members	365
	6-1 Introduction	365
	6-2 Classification of Flexural Members	372
	6-3 Failure Modes of Flexural Members and Design Strength for Compact Shapes	377
	6-4 Design Strength in Bending for Noncompact and Slender Shapes	388
	6-5 Design of Flexural Members for Shear	392
	6-6 <i>AISC</i> Beam Design Tables	396
	6-7 Serviceability Requirements for Beams	400
	6-8 Beam Design Procedure	403
	6-9 Biaxial Bending and Torsion	407
	6-10 Beam Bearing Failure Modes and Design Strength	422
	6-11 Bearing Stiffeners	433
	6-12 Open-Web Steel Joists	440
	6-13 Floor Plates, Rectangular Plates, and Grating	446
	6-14 Cantilevered Girder Systems	452
	6-15 Flexural Strength of WT-Sections and Double Angles	455
	6-16 Flexural Strength of Square and Rectangular HSS, and Box-Shaped Sections	463
	References	467
	Exercises	468
Chapter 7:	Composite Beams and Columns	479
	7-1 Introduction	479
	7-2 Shear Studs	481

7-3	Composite Beam Strength	488
7-4	Shoring of Composite Beams	504
7-5	Deflection of Composite Beams	509
7-6	Composite Beam Analysis and Design Using the <i>AISC</i> Tables	511
7-7	Composite Beam Design Procedure	516
7-8	Practical Considerations for Composite Beam and Girder Construction	530
7-9	Other Types of Composite Construction	534
7-10	Axially Loaded Composite Columns	535
7-11	Flexural Strength of Concrete-Filled Composite Columns	547
7-12	Flexural Strength of Concrete-Encased Composite Columns	550
	References	551
	Exercises	551
Chapter 8:	Members Under Combined Axial Load and Bending Moment	557
8-1	Introduction to Beam-Columns	557
8-2	Examples of Beam–Columns in Braced Frames	563
8-3	Beam—Column Design	566
8-4	Moment Amplification (P-DELTA) Effects	569
8-5	Stability Analysis and Calculation of the Required Strengths of Beam–Columns	571
8-6	Direct Analysis Method (DAM)	572
8-7	Amplified First-Order Analysis Method (AFOAM) and Amplification Factors	575
8-8	First-Order Analysis Method (FOAM)	581
8-9	Effective Length Method (ELM)	582
8-10	Unbalanced Moments, M_{nt} , for Columns in Braced Frames Due to the Eccentricity of the Girder and Beam Reactions	594
8-11	Student Practice Exercise and Column Design Templates	621
8-12	Analysis of Moment Frames Using the Amplified First-Order Method (AFOAM)	623
8-13	Analysis and Design of Beam-Columns for Combined Axial Tension and Bending	638
8-14	Design of Beam-Columns for Combined Axial Tension and Bending	642
8-15	Column Base Plates	642
8-16	Anchor Rods	648
8-17	Uplift Force at Column Base Plates	653
8-18	Tension Capacity of Anchor Rods Embedded in Concrete	657
8-19	Resisting Lateral Shear at Column Base Plates	660

8-20	Column Base Plates Under Axial Load and Moment	664
8-21	Column Schedule	677
	References	680
	Exercises	681
Chapter 9:	Bolted Connections	693
9-1	Introduction	693
9-2	Bolt Installation	695
9-3	Bolt Hole Types and Spacing Requirements	701
9-4	Failure Modes and Strength of Bolts	703
9-5	Eccentrically Loaded Bolts: Shear	728
9-6	Eccentrically Loaded Bolts: Bolts in Shear and Tension	738
9-7	Prying Action: Bolts in Tension	745
9-8	Framed Beam Connections	750
	References	764
	Exercises	765
Chapter 10:	Welded Connections	771
10-1	Introduction	771
10-2	Types of Welds and Welded Joints	776
10-3	Weld Symbols	779
10-4	Dimensional Requirements for Welds	781
10-5	Fillet Weld Strength	784
10-6	Plug and Slot Weld Strength	791
10-7	Groove Weld Strength	796
10-8	Eccentrically Loaded Welds: Shear Only	799
10-9	Eccentrically Loaded Welds: Shear Plus Tension	809
10-10	Bolts Used in Combination with Welds	812
	References	812
	Exercises	813
Chapter 11:	Moment Connections, Bracing and Truss Connections, and Miscellaneous Details	821
11-1	Introduction	821
11-2	Moment Connections: Introduction	821
11-3	Partially Restrained (PR) Moment Connections and Flexible Moment Connections (FMC)	826
11-4	Fully Restrained (FR) Moment Connections	829
11-5	Moment Connections in Beams and Beam Splices	838
11-6	Column Stiffeners in Moment Connections	848
11-7	Column Splices	857

11-8	Design of Gusset Plates in Vertical Bracing and Truss Connections	861
11-9	Coped Beams	879
11-10	Holes in Beams	891
	References	896
	Exercises	898
Chapter 12:	Floor Vibrations Due to Human Activity	903
12-1	Introduction	903
12-2	Vibration Terminology	904
12-3	Natural Frequency of Floor Systems	905
12-4	Floor Systems with Open-Web Steel Joists	909
12-5	Evaluation of Floor Systems for Walking Vibrations	910
12-6	Analysis Procedure for Walking Vibrations	915
12-7	Rhythmic Vibration Criteria	927
12-8	Sensitive Equipment Vibration Criteria	932
12-9	Vibration of Monumental Steel Stairs	933
12-10	Vibration Control Measures	934
	References	936
	Exercises	936
Chapter 13:	Built-up Sections—Welded Plate Girders	941
13-1	Introduction to Welded Plate Girders	941
13-2	Design of Plate Girders	946
13-3	Bending Strength of Welded Plate Girders with Slender Webs	947
13-4	Design for Shear in Plate Girders <i>without</i> Diagonal Tension Field Action (<i>AISC</i> Section G2.1)	951
13-5	Diagonal Tension Field Action in Plate Girders (<i>AISC</i> Section G2.2)	953
13-6	Connection of Welded Plate Girder Components	957
13-7	Plate Girder Preliminary Design (LRFD)	959
13-8	Plate Girder Final Design (LRFD)	959
	References	966
	Exercises	966
Chapter 14:	Practical Considerations in the Design of Steel Buildings	971
14-1	Introduction and Rules of Thumb for Structural Steel Design	971
14-2	Layout of Structural Systems in Steel Buildings	973
14-3	Lateral Load Distribution in Horizontal Diaphragms; Drag Struts (or Collectors) and Chords	980
14-4	Design of Roof and Floor Diaphragms in Steel-Framed Buildings	1005

14-5	Transfer of Lateral Loads in Roofs with Open-Web Steel Joists	1016
14-6	Girts and Wind Columns	1017
14-7	Relief or Shelf Angles for Supporting Brick Veneer, and Parapet Details	1019
14-8	Achieving Adequate Drainage in Steel-Framed Roofs	1021
14-9	Ponding in Steel-Framed Roof Systems	1022
14-10	Stability Bracing for Beams, Columns, and Beam–Columns	1023
14-11	Steel Preparations, Finishes, and Fireproofing	1032
14-12	Corrosion Protection of Structural Steel	1036
14-13	Introduction to Strengthening and Retrofitting of Existing Steel Structures	1041
14-14	Elastic Shortening of Columns in Tall Steel Buildings	1048
14-15	Structural Integrity Requirements	1051
14-16	Structural Drawing Notes, and Sample Roof/ Floor Plans and Details	1055
14-17	Student Design Projects	1062
	References	1077
	<i>Appendix: Plastic Analysis and Design of Continuous Beams and Girders</i>	1081
	<i>Index</i>	1093
