

Exoplanets: Compositions, Mineralogy, Evolution

90 *Reviews in Mineralogy and Geochemistry* 90

TABLE OF CONTENTS

1 Host Stars and How Their Compositions Influence Exoplanets

Natalie R. Hinkel, Allison Youngblood, Melinda Soares-Furtado

INTRODUCTION	1
BASICS OF STARS	2
Formation	2
Structure	4
Photon and particle emissions	6
Evolution	7
AGE-DATING STARS	8
POPULATION DISTRIBUTION OF STARS IN THE GALAXY	10
Abundance gradient in the Milky Way	10
USING SPECTROSCOPY TO MEASURE THE COMPOSITION OF STARS.....	12
Spectroscopy and stellar abundances	12
Math formalism of stellar abundances	14
Stellar abundance caveats.....	16
THE COMPOSITION OF STARS AND THEIR PLANETS.....	16
Stellar abundances as a proxy for planetary interiors.....	17
Additional considerations for the star–planet chemical link	18
ACKNOWLEDGMENTS.....	20
REFERENCES	20

2 Chemistry in Protoplanetary Disks

Ke Zhang

INTRODUCTION	27
OVERVIEW: CHEMISTRY IN PLANET-FORMING DISKS	27
BASICS OF PROTOPLANETARY DISKS	28
OBSERVATIONS OF MOLECULES IN PROTOPLANETARY DISKS.....	29

INFRARED OBSERVATIONS OF PROTOPLANETARY DISKS	29
Near-IR wavelength range (1–5 μm).....	29
Mid-IR wavelength (5–30 μm)	29
Far-IR wavelength range (30–550 μm)	31
MILLIMETER WAVELENGTH OBSERVATIONS OF PROTOPLANETARY DISKS	31
THEORIES AND MODELS OF CHEMISTRY IN PROTOPLANETARY DISKS	33
Types of chemical reactions in protoplanetary disks.....	33
Chemical modeling of protoplanetary disks.....	34
CURRENT INSIGHT INTO CHEMISTRY IN PROTOPLANETARY DISKS.....	35
Snowlines	35
Abundances of carbon, oxygen, and nitrogen carriers	36
Complex organic molecules	39
ELEMENTAL RATIOS:	
LINK FROM DISK COMPOSITIONS TO PLANETARY COMPOSITIONS	40
Link between disk compositions and exoplanetary atmospheric compositions.....	40
Isotopic ratios: Link between disk compositions and solar system objects	42
PREDICTIONS OF FUTURE DIRECTIONS	44
REFERENCES	45

3

Planet Formation—Observational Constraints, Physical Processes, and Compositional Patterns

Christoph Mordasini, Remo Burn

INTRODUCTION	55
Motivation and chapter content	55
Challenges in planet formation theory	55
OVERVIEW OF OBSERVATIONAL CONSTRAINTS	57
Selected constraints from the Solar System	57
Statistical constraints: the demographics of extrasolar planets.....	59
Predictions from original Solar System theory and the shift of paradigms.....	63
PHYSICAL PROCESSES GOVERNING PLANET FORMATION	65
Gas disk	67
Dynamics of dust and pebbles.....	70
Pebbles to planetesimals.....	73
Solid accretion mechanisms	75
Gas accretion	81
Orbital migration	85
PUTTING THE PIECES TOGETHER:	
GLOBAL MODELS AND PLANETARY POPULATION SYNTHESIS	87
Coupled planet formation models	88
Planetary population synthesis	89
THE COMPOSITIONAL OPPORTUNITY.....	91
Chemical and compositional clues to the origin and evolution of planets	91
Disk carbon to oxygen content	92
Bulk and atmospheric composition	94
SUMMARY AND CONCLUSIONS.....	95
ACKNOWLEDGEMENTS	97
REFERENCES	97

4

Meteorites and Planet Formation

Rhian H. Jones

ROLE OF METEORITES IN UNDERSTANDING PLANET FORMATION.....	113
METEORITES FROM ASTEROIDS.....	114
Undifferentiated meteorites: Chondrites	114
Differentiated meteorites: Achondrites and irons	120
PLANETARY METEORITES FROM THE MOON AND MARS.....	124
Lunar meteorites	124
Martian meteorites.....	125
CHEMICAL AND ISOTOPIC HETEROGENEITY IN THE SOLAR SYSTEM.....	125
Chemical heterogeneity in the inner Solar System.....	125
Oxygen isotope compositions of planetary materials.....	127
Nucleosynthetic isotope heterogeneity in planetary materials	129
TIMELINE OF EVENTS INFERRED FROM METEORITES.....	131
METEORITES AND PLANET FORMATION: OVERVIEW.....	133
ACKNOWLEDGEMENTS	134
REFERENCES	134

5

The Evolution and Delivery of Rocky Extra-Solar Materials to White Dwarfs

Dimitri Veras, Alexander J. Mustill, Amy Bonsor

INTRODUCTION	141
STAGE 1: TRAVERSING THE GIANT BRANCH PHASES.....	142
Introduction	142
Orbital shifts	143
Physical survival	145
Compositional alteration	148
STAGE 2: DELIVERING MATERIAL TO THE WHITE DWARF'S ROCHE SPHERE ..	148
Introduction	148
Known planetary material exterior to the white dwarf Roche sphere	149
Delivery mechanisms: dust, pebbles and boulders as polluters.....	151
Delivery mechanisms: asteroids as polluters.....	152
Delivery mechanisms: comets as polluters.....	152
Delivery mechanisms: moons as polluters	153
Delivery mechanisms: terrestrial planets as polluters	153
Delivery mechanisms: giant planets as polluters.....	153
STAGE 3: PROCESSING DEBRIS WITHIN THE WHITE DWARF ROCHE SPHERE ..	154
Introduction	154
Observations of debris: transits	155
Observations of debris: infrared excess	155
Observations of debris: gas emission lines.....	156
Theoretical considerations on the formation of debris	157
Theoretical considerations on the evolution of debris.....	158
ACKNOWLEDGEMENTS	159
REFERENCES	159

6

The Chemistry of Extra-solar Materials from White Dwarf Planetary Systems

Siyi Xu (许偲艺), Laura K. Rogers, Simon Blouin

INTRODUCTION	171
METHODS	173
Observation.....	173
Modeling	175
Composition of the accreting material	179
INTERPRETATION	181
Key processes	181
Comparison with meteorites.....	182
Modeling exoplanetary abundances and exogeology.....	185
LOOKING FORWARD.....	188
A large, uniform sample of polluted white dwarfs.....	188
Improving abundance measurements: Current treatment of uncertainties	188
Improving abundance measurements: Constitutive physics uncertainties	189
Connecting exoplanetary compositions with the solar system.....	190
Dust and gas composition.....	191
CONCLUSIONS.....	191
ACKNOWLEDGEMENT	192
REFERENCES	192

7

Exoplanet Mineralogy

Keith D. Putirka

INTRODUCTION	199
AN OVERVIEW OF PLANETARY STRUCTURE, MINERALOGY & PETROLOGY ...	200
Planetary structure.....	200
Mineralogic structure.....	201
The driving force of planetary differentiation: partial melting.....	202
Planetary layers	206
GEOCHEMISTRY OF EARTH AND THE OTHER INNER PLANETS	213
Converting elements to oxides, and oxides to elements	216
WORKING WITH STELLAR COMPOSITIONS.....	218
CALCULATING MINERALOGY AND ROCK TYPE:	
METHODS AND UNCERTAINTIES	219
Star compositions, chondrites and planetary bulk compositions.....	219
Models for core formation (a 1 st -order control on mantle mineralogy).....	221
Calculating mantle mineralogy.....	222
ERROR ANALYSIS IN TERNARY PROJECTIONS	
(USING POLLUTED WHITE DWARFS AS EXAMPLES)	232
What are polluted white dwarfs? (possibilities and nominal problems)	232
Monte Carlo simulations	233
Quirks of ternary projections, and their plotted errors	236
Are any exoplanets exotic?.....	238
Comparing multiple observations of individual PWDs.....	240

Do Methods 1 and 2 agree in predicting PWD mineralogy?.....	242
THERMODYNAMIC CONCEPTS & RELATED CAVEATS	242
Solid solution (“ <i>All models are wrong; some are useful</i> ” – George Box).....	243
Gibbs–Duhem equation	246
O, C, S, H and other unknowns	247
ARE WE BUILDING SAND CASTLES OR CATHEDRALS?.....	250
ACKNOWLEDGEMENTS	251
REFERENCES	252

8

From Stars to Diverse Mantles, Melts, Crusts, and Atmospheres of Rocky Exoplanets

*Claire Marie Guimond, Haiyang Wang, Fabian Seidler,
Paolo Sossi, Aprajit Mahajan, Oliver Shorttle*

INTRODUCTION	259
BULK CHEMICAL COMPOSITIONS OF ROCKY EXOPLANETS.....	262
The planet–star connection.....	262
Nebular condensation	264
The role of O in controlling core/mantle ratios.....	265
Post-accretionary processes.....	266
MANTLE MINERALOGY OF ROCKY EXOPLANETS	267
Possible range of mantle mineralogies for silicate planets.....	268
Beyond Earth-like mantles	272
Life-essential elements (CHNOPS) in rocky exoplanet mantles.....	273
MELTS AND CRUSTS OF ROCKY EXOPLANETS.....	277
Mantle melting temperature	277
Melt and crustal compositions.....	279
Melts, crusts and geodynamics.....	281
OBSERVING EXOPLANET COMPOSITIONS AND MINERALOGIES	282
Lava worlds as a window into rocky planetary interiors	282
Dust tails of disintegrating planets	285
Reflectance spectra and surface mineralogy.....	285
SUMMARY	286
ACKNOWLEDGEMENTS	287
REFERENCES	287

9

Some Tectonic Concepts Relevant to the Study of Rocky Exoplanets

Keith D. Putirka

INTRODUCTION	301
SOME DEFINITIONS AND BASIC CONCEPTS	302
Plate tectonics and its basic parts	302
The alternatives: Delamination, stagnant lid (or plume lid or drip) and episodic lid tectonics	304
Why one tectonic mode and not another?	306
PLATE TECTONIC DRIVING FORCES	307

Buoyancy forces, rock types, and isostasy	309
How the mantle flows and rocks break	311
Brittle deformation and the plate boundary	312
SO, WHEN IS A PLANET EARTH-LIKE?	314
PROBLEMS OF SUBDUCTION	314
PLATE TECTONICS ELSEWHERE IN THE SOLAR SYSTEM?	315
PROSPECT FOR MODELING TECTONICS ON EXOPLANETS	316
REFERENCES	318

10

A Framework for the Origin and Deep Cycles of Volatiles in Rocky Exoplanets

Rajdeep Dasgupta, Debeet Pathak, Maxime Maurice

INTRODUCTION	323
ORIGIN OF LEVE IN THE ROCKY PLANETS	324
Lessons from the Solar System—primitive building blocks	324
The BSE abundance of elements versus 50% condensation temperature (T_{50})	327
THE FATE OF LEVE DURING THE ACCRETION AND	
DIFFERENTIATION OF ROCKY BODIES	328
LEVE fractionation during alloy–silicate differentiation or core formation	331
Alloy–silicate partitioning of carbon	332
Alloy–silicate partitioning of nitrogen	333
Alloy–silicate partitioning of sulfur	334
Alloy–silicate partitioning of hydrogen	336
MAGMA OCEAN DEGASSING: LEVE REDISTRIBUTION AND	
ESTABLISHING A SECONDARY ATMOSPHERE	337
Physical control on MO outgassing of LEVEs	338
Chemical controls on magma ocean outgassing	339
Solubility laws	340
Composition of the outgassed atmosphere	343
Retention of LEVEs in the solid mantle during MO crystallization	345
POSSIBLE VOLATILE FLUXES IN AND OUT OF THE PLANET’S INTERIOR	
AND THEIR POSSIBLE VARIATION THROUGH TIME	347
Extraction of LEVEs via mantle melting	348
Lithologic control on mantle melting and partial melt compositions	348
MODE OF LEVE STORAGE AND EFFECTS ON MANTLE MELTING	350
Storage mechanisms of LEVEs in the rocky mantles	350
Extraction of LEVEs via mantle melting	352
Melting of nominally anhydrous mantle	353
Dehydration and decarbonation melting	354
Fate of carbon in reduced mantles	355
DEGASSING OF LEVE FROM MANTLE MELTS	358
SEQUESTRATION OF VOLATILES IN THE CRUST AND	
POSSIBLE RECYCLING INTO THE MANTLE	359
DEEP VOLATILE CYCLES IN OTHER ROCKY WORLDS:	
OUTLOOK AND NEED FOR NEWER CONSTRAINTS	360
ACKNOWLEDGMENTS	361
REFERENCES	361

11

Exoplanet Magnetic Fields

David A. Brain, Melodie M. Kao, Joseph G. O'Rourke

INTRODUCTION	375
THEORY OF EXOPLANET MAGNETIC DYNAMOS	375
Fundamental dynamo equations	376
Key non-dimensional parameters	377
Application of theory to Earth's dynamo	378
Application of theory to the Solar System	381
Takeaway messages for studies of exoplanets	383
ASSESSING EXOPLANET MAGNETIC FIELDS	383
Direct measurements	384
Indirect inferences	389
A promising future	394
INFLUENCES OF EXOPLANET MAGNETIC FIELDS	395
Interaction with space environment	395
Atmospheric escape	396
Particle precipitation	400
Rotation rate and orbit	402
ACKNOWLEDGMENTS	403
REFERENCES	403

12

Transiting Exoplanet Atmospheres in the Era of JWST

Eliza M.-R. Kempton, Heather A. Knutson

INTRODUCTION	411
A historical perspective	411
Exoplanet demographics	413
Detection techniques	413
Planet types and order-of-magnitude occurrence rates	414
Composition constraints from bulk density measurements	415
Observational techniques for atmospheric characterization	416
Common model frameworks for interpreting exoplanet spectra	419
High-level scientific questions	419
ATMOSPHERIC COMPOSITION	420
Composition as a signpost of formation and atmospheric chemistry	420
Water, water everywhere	423
Refractory species in hot Jupiter atmospheres	425
The JWST landscape	427
The challenge of terrestrial planets	431
AEROSOLS	432
Terminology and background	432
Hot Jupiter aerosols	433
Aerosols in sub-Neptunes and super-Earths	435
ATMOSPHERIC MASS LOSS	436
DAYSIDE TEMPERATURE STRUCTURE	439
The physics of thermal inversions	439
The hot-to-ultrahot Jupiter transition	439

Hot Jupiter albedos	442
The dayside temperatures of sub-Neptunes and super-Earths	442
THREE-DIMENSIONAL ATMOSPHERIC STRUCTURE	444
Fundamentals of day–night heat transport on hot Jupiters	444
Complications from clouds, chemical gradients, and magnetic fields	446
Circulation patterns of sub-Neptune-sized planets	447
CONCLUSIONS	447
ACKNOWLEDGEMENTS	448
REFERENCES	448

13

An Overview of Exoplanet Biosignatures

Edward W. Schwieterman, Michaela Leung

INTRODUCTION: THE SEARCH FOR LIFE BEYOND THE SOLAR SYSTEM	465
Habitable exoplanets and the context for biosignatures	465
What is an exoplanet biosignature?	466
ATMOSPHERIC (GASEOUS) BIOSIGNATURES	467
Oxygen and ozone (O ₂ and O ₃)	469
False positives for oxygen and ozone biosignatures	473
Methane (CH ₄)	478
Nitrous oxide (N ₂ O)	481
Alternative biosignature gases	484
Frameworks for assessing potential atmospheric biosignatures	490
SURFACE AND TEMPORAL BIOSIGNATURES	492
Surface signatures of photosynthesis	494
The vegetation red edge (VRE) and other photosynthetic “edge” signatures	494
Rhodopsin-based phototrophy	496
Predicting photosynthetic surface signatures around other stars	496
Non-photosynthetic and other surface biosignatures	497
Polarization and chirality	498
Fluorescence and bioluminescence	498
Seasonal biosignatures	498
CONCLUSIONS	499
ACKNOWLEDGMENTS	501
REFERENCES	501

14

The Early Earth as an Analogue for Exoplanetary Biogeochemistry

Eva E. Stüeken, Stephanie L. Olson, Eli Moore, Bradford J. Foley

INTRODUCTION: WHY THE EARLY EARTH?	515
TOOLS AND PRINCIPLES OF PALEO-BIOGEOCHEMISTRY	516
Deciphering biosignatures from the rock record	516
Fundamentals of biochemistry	519
Fundamentals of geological constraints on Earth’s atmosphere	521
THE GEOLOGICAL RECORD OF LIFE AND ENVIRONMENTS	523
Life on a fully anoxic planet (ca. 4.5–3 Ga)	523

Microbial life in a redox-stratified world with modern plate tectonics (ca. 3–0.5 Ga).....	530
QUANTITATIVE CONSTRAINTS ON ATMOSPHERIC BIOSIGNATURES THROUGH TIME.....	536
Oxygen (O ₂).....	537
Methane (CH ₄).....	538
Nitrous oxide (N ₂ O).....	541
Other signatures of life	542
CONCLUSIONS.....	543
ACKNOWLEDGMENTS.....	544
REFERENCES	544

15

Exoplanet Geology: What Can We Learn from Current and Future Observations?

Bradford J. Foley

OVERVIEW.....	559
INTRODUCTION	559
TESTING MODELS OF THE COMPOSITIONAL DIVERSITY OF ROCKY EXOPLANETS	562
Direct measures of rocky planet composition	563
Disintegrating planets.....	563
Lava worlds	564
Emission from solid surface planets.....	565
CONSTRAINTS ON EXOPLANET GEOLOGY FROM THE PRESENCE OR ABSENCE OF AN ATMOSPHERE	566
Methods for atmosphere characterization on rocky exoplanets	567
Observations of rocky planet atmospheres to date	568
Atmosphere sources and sinks.....	570
Controls on interior outgassing	571
Thermal vs non-thermal escape and implications for the geological processes of airless bodies	575
Implications for outgassing history and future directions	578
FUTURE DIRECTIONS: TESTING THE CARBONATE–SILICATE CYCLE FEEDBACK	580
SUMMARY	585
ACKNOWLEDGEMENTS	586
REFERENCES	587
