<i>About the Author</i>	<i>xxi</i>
<i>Reviewers</i>	<i>xxiii</i>
Chapter 1: Getting Started with Python for Finance	1
Introduction	1
Structure	2
Objectives	2
Finance Principles and Contemporary Trends in Data Analysis	2
Financial Investor	4
Financial Market Institutions	5
Two Critical Finance Categories	6
Financial Data Analysis	7
Comparing Analytical Tools for Various Programming Languages	8
Python Programming Language Advantages	11
The Role of Python in Finance	12
Python Instruments Are Ready for Data Analysis	14
Installing Python on a Local PC	16
Installation Procedure	16
Post-Installation Setup and Configuration	17
Managing Non-Standard Packages	19

Python IDEs	19
Spyder	20
Jupyter Notebook	21
Easy Start with Python in the Cloud	22
Python Libraries for Finance	23
Installation of Essential Libraries for Data Manipulation and Data Analysis	26
Python Essentials	30
Syntax Principles and Python Code Style	31
Basic Operators	32
Control Flow and Simple Output	33
Python Basic Data Structures	35
Types for Data Analysis	36
Conclusion	38
Questions	39
Key Terms	40
References	41
Chapter 2: Python Tools for Data Analysis: Primer to Pandas and NumPy	43
Introduction	43
Structure	43
Objectives	44
The Creation and Manipulation of Python Data Structures	44
Basic Data Manipulations and Computations Within Python Built-In Data Structures	44
Calculating Operations for Data Analysis and Rate of Returns	47
Defining Custom Functions for Data Analysis	51
NumPy for Data Analysis	53
Creating NumPy Arrays	53
Sorting and Sorting by Arguments	56
Adding and Removing Data	58
Array Shape Manipulation	59

Find Values and Filtering Operations	63
Arithmetical and Statistical Operations	65
Working with pandas for Data Analysis	69
Creating a Series and DataFrame	70
Indexing, Finding, and Filtering Data	72
Data Manipulation	82
Calculated Values and Creating New Features	90
Conclusion	93
Questions	94
Key Terms	94
References	95
Chapter 3: Financial Data Manipulation with Python	97
Introduction	97
Structure	98
Objectives	98
Financial Data World: Sources and Valuation Aspects	98
Yahoo Finance to Access Financial Market Data	100
Working with Diverse File Formats	110
Excel Data File Format with pandas	111
CSV Data File Format with pandas	113
Open Data Sources and Python Library for Getting Data	119
Low-Level APIs and Web Scraping	130
Binance Cryptocurrency Exchange Example	130
Web Scraping and the Beautiful Soup Python Library	134
Conclusion	136
Questions	137
Key Terms	138
References	139

Chapter 4: Exploratory Data Analysis for Finance	141
Introduction	141
Structure	142
Objectives	142
Basic Patterns for Processing Raw Financial Data	142
Importing Data and Structuring DataFrames	144
Elementary Data Clearing Patterns	148
Data Transformation and the Creation of New Features	152
EDA Essentials for Financial Analysis	157
Descriptive Statistics	157
Basic Statistical Data Visualization	163
Moving Averages in Financial Analysis	169
Basics of Correlation Analysis	172
Conclusion	177
Questions	178
Key Terms	178
References	179
Chapter 5: Investment and Trading Strategies	181
Introduction	181
Structure	182
Objectives	182
Investment Strategies in the Financial Assets Markets	182
Fundamental Analysis	187
Graphical Analysis with Python	193
Basic Stock Graphics Tools	193
Graphical Analysis Patterns	202
Technical Analysis Metrics and Tools	204
Conclusion	213
Questions	214
Key Terms	214
References	215

Chapter 6: Asset Pricing and Portfolio Management	217
Introduction	217
Structure	217
Objectives	218
Allocation of Financial Assets and Core Metrics with Python	218
Portfolio Theory and Diversification	228
Markowitz's Portfolio Theory and Its Modifications	233
Modifications of the Original Markowitz's Portfolio Theory	235
Simulation Method for Estimated Optimal Asset Allocation	237
Mathematical Optimization Method with Python	242
Regressions and Capital Asset Pricing Model Fundamentals	249
Python Libraries for Regression Analysis	251
Python Tools for CAPM Assessment	256
Conclusion	258
Questions	259
Key Terms	260
References	261
Chapter 7: Time-Series Analysis and Financial Data Forecasting	263
Introduction	263
Structure	264
Objectives	264
TSA: Core Principles and Concepts	264
Pandas Toolkits for Time-Series Data Analysis	271
Traditional Forecasting Methods and Models	272
The statsmodels Toolkits for TSA	274
Error Statistical Metrics: MAPE, MSE, and MAE	277
Exponential Smoothing and the HW Model	280
Seasonality Decomposition in Python	284
The HW Method: Multiplicative Trend and Seasonal Components	285
ARIMA Approach: From MA to Seasonality and External Variables	288
Stationarity Test	289
Autocorrelation and Partial Autocorrelation Functions	292

Custom ARIMA Model Estimation	294
SARIMA and SARIMAX Models	297
Conclusion	303
Questions	304
Key Terms	305
References	305
Chapter 8: Risk Assessment and Volatility Modeling	307
Introduction	307
Structure	308
Objectives	308
Probability Theory Basics	308
Normal Distribution	311
VaR Metric for Risk Assessment in Finance	319
Monte Carlo Method in Finance	328
Geometric Brownian Motion Method for Price Prediction	330
Option Pricing: The Black-Scholes Formula	336
ARCH and GARCH Models	347
Model Fitting and Diagnostic Checking	356
Conclusion	361
Questions	361
Key Terms	362
References	363
Chapter 9: Machine Learning and Deep Learning in Finance	365
Introduction	365
Structure	365
Objectives	366
ML Concepts	366
ML Models	367
The Universal Algorithm of ML	370
Python ML Libraries and Tools	371
Scikit-Learn Python Library	371
XGBoost and LightGBM Libraries	375

ML Models for Financial Data	379
Clustering Analysis of Financial Data	379
Forecasting Stock Prices	384
Conclusion	392
Questions	393
Key Terms	394
References	395
Chapter 10: Time-Series Analysis and Forecasting with the FB Prophet Library	397
Introduction	397
Structure	397
Objectives	398
Prophet Essentials	398
Forecasting with Prophet	404
Seasonality Parameters of Prophet's Models	405
Changepoints Adjusting	412
Additional Regressors	416
Cross-Validation and Hyperparameter Tuning	420
Cross-Validation and Preventing Overfitting	420
Hyperparameter Tuning	423
Conclusion	428
Questions	428
Key Terms	429
References	429
Appendix A: Python Code Examples for Finance	431
Creating a PythonFinance Virtual Environment	431
Importing Libraries	433
Fetching Stock Price Data from Yahoo Finance	433
Fetching Other Data from Yahoo Finance	438
Technique Analyses Indices (TA-Lib Library)	441
Graphical Analyses (Core Libraries)	442

Graphical Analyses (mplfinance Library)	444
Portfolio Optimization (scipy Library)	446
Statsmodels Regression	450
Time-Series Data Featuring	452
pmdarima Parameters Tuning (pmdarima Library)	454
VAR	457
GARCH Models (arch Library)	458
Prophet Library: Model Parameters Definition and Hyperparameters Tuning with Cross-Validation	461
Appendix B: Glossary	465
Appendix C: Valuable Resources	473
Index	475
