... **Sensing Media**
Aesthetics, Philosophy,
and Cultures of Media
EDITED BY WENDY HUI KYONG CHUN
AND SHANE DENSON

What does it mean to think, feel, and sense with and through media? In this cross-disciplinary series we present books and authors exploring this and related questions: How do media technologies, broadly defined, transform artistic practices and aesthetic sensibilities? How are practices, encounters, and affects entangled with the deep infrastructures and visible surfaces of the media environment? How do we “make sense”—cognitively, perceptually, and culturally—of media?

We are especially interested in contributions that open our understanding of media aesthetics beyond the narrow confines of Western art and aesthetic values. We seek works that reestablish the environmental connections between art and technology as well as between the aesthetic, the sensible, and the philosophical. We invite alternative epistemologies and phenomenologies of media rooted in the practices and subjectivities of Black, Indigenous, queer, trans, and other communities that have been unjustly marginalized in these discussions. Ultimately, we aim to sense the many possible worlds that media disclose.
