

CONTENTS

<i>Preface</i>	<i>xi</i>
Chapter 1 Introduction to Computer Graphics	1
1.1 Definition of Computer Graphics	1
1.1.1 Definition of Computer Aided Design (CAD)	2
1.2 Image Generation on Screen	3
1.2.1 Working of Cathode Ray Tubes (CRT)	3
1.2.2 Design of Deflection Mechanism of CRT	4
1.3 Image Generating Techniques	5
1.3.1 CRT Based Display Devices	5
1.3.2 Non-CRT Based Display Devices	11
1.4 Graphic User Interface (GUI)	12
1.5 Refresh Rate	16
1.6 Working of Laser Printers	20
Exercises	26
Objective Questions	27
Answers	28
Chapter 2 Vector Representation of Geometric Entities	29
2.0 Introduction	29
2.1 Line Generation Algorithm Using Equation of Line	30
2.2 Line Generation Using DDA Algorithm	37
2.3 Bresenham's Line Generation Algorithm	43
2.4 Bresenham's Midpoint Circle Generation Algorithm	55
2.5 Bresenham's Midpoint Ellipse Generation Algorithm	61
2.6 Arc Generation Algorithm Using Trigonometric Function	70
Exercises	79
Objective Questions	80
Answers	81
Chapter 3 Two-Dimensional Transformation	83
3.1 Introduction	83
3.2 Representation of 2D Geometry	84
3.3 Types of 2D Transformations	84
3.3.1 Scaling Transformation	85
3.3.2 Rotation Transformation	87
3.3.3 Translation Transformation	89
3.4 Need of Homogeneous Coordinates	90

3.5	Special Transformation	101
3.5.1	Reflection Transformation	101
3.5.2	Shear Transformation	112
3.6	Inverse Transformation	127
	Exercises	132
	Objective Questions	133
	Answers	134
Chapter 4	Three-Dimensional Transformation	135
4.1	Introduction	135
4.2	Scaling Transformation	136
4.3	Translation Transformation	136
4.4	Rotation Transformation	137
4.5	Derivation for Rotation About Any Arbitrary Line in 3D Space	143
4.6	Reflection Transformation	156
4.7	Reflection About Any Arbitrary Plane in 3D Space	158
4.8	Shear Transformation	164
	Exercises	165
	Objective Questions	166
	Answers	168
Chapter 5	Parametric Representation of Planar Curves	169
5.1	Introduction	169
5.2	Parametric Representation of a Circle	170
5.3	Parametric Representation of an Ellipse	174
5.4	Parametric Representation of a Parabola	178
5.5	Parametric Representation of a Hyperbola	182
	Exercises	188
	Objective Questions	188
	Answers	190
Chapter 6	Parametric Representation of Space Curves	191
6.1	Introduction to Space Curves	191
6.2	Cubic Spline	191
6.3	B-Spline	202
6.4	Bézier Curves	204
6.5	Non-Uniform Rational B-Splines	207
6.5.1	Control Point	208
	Exercises	212
	Objective Questions	213
	Answers	214

Chapter 7 Parametric Representation of Surfaces	215
7.1 Introduction to Surfaces	215
7.2 Surface of Revolution	215
7.3 Sweep Surfaces	222
7.4 Helical Spring	224
Exercises	226
Objective Questions	226
Answers	227
Chapter 8 Windowing and Clipping	229
8.1 Introduction	229
8.2 Windowing	229
8.3 Clipping	230
8.4 Need for Windowing and Clipping	231
8.5 Viewing Transformation	232
8.6 2D Clipping	233
8.7 Cohen-Sutherland Subdivision Line Clipping Algorithm	234
8.8 Intersection Calculation and Clipping	236
8.9 Midpoint Subdivision Algorithm	237
8.10 Advantage of the Midpoint Subdivision Algorithm	238
8.11 Comparison Between Cohen-Sutherland and Midpoint Subdivision Line Clipping Algorithms	238
8.12 Polygon Clipping	240
8.13 Sutherland-Hodgman Algorithm	242
8.14 3D Clipping	243
8.15 Multiple Windowing	245
8.16 Character Clipping	245
8.17 Applications of Clipping	246
Exercises	246
Objective Questions	247
Answers	248
Chapter 9 Generation of a 3D Model	249
9.1 Introduction	249
9.2 Wireframe Modeling	250
9.3 Surface Modeling	251
9.4 Solid Modeling	253
9.4.1 Primitive Creation Functions	254
9.4.2 Constructive Solid Geometry	254
9.4.3 Boundary Representation	258
9.4.4 Sweeping	261

9.5	Advantages of Solid Modeling	261
9.6	Applications of Solid Modeling	262
9.7	Rendering	262
9.7.1	Scanline Rendering	263
9.7.2	Ray Trace Rendering	263
9.7.3	Radiocity Rendering	264
	Exercises	265
	Objective Questions	266
	Answers	268
Chapter 10	Projections	269
10.1	Introduction	269
10.2	Projections	269
10.2.1	Perspective Projection	271
10.2.2	Parallel Projection	274
10.2.3	Differentials Between Parallel Projection and Perspective Projection	280
10.3	Solved Problems	281
	Exercises	288
	Objective Questions	289
	Answers	290
Chapter 11	Graphics Programs in C Language	291
11.1	Program-1	291
11.2	Program-2	292
11.3	Program-3	293
11.4	Program-4	294
11.5	Program-5	296
11.6	Program-6	296
11.7	Program-7	297
11.8	Program-8	300
11.9	Program-9	304
11.10	Program-10	307
Chapter 12	OpenGL with Computer Graphics	311
12.1	Introduction	311
12.1.1	Graphical Functions of OpenGL	312
	Exercises	321
	Objective Questions	321
	Answers	322

Chapter 13	Programming Graphics Using OpenGL	323
13.1	Application of Computer-Generated Images	323
13.1.1	Computer-Aided Design	323
13.1.2	Image Processing	325
13.1.3	Process Monitoring	327
13.1.4	Entertainment and Publishing	328
13.1.5	Simulation	328
13.2	Drawing Figures Using OpenGL	329
13.2.1	Getting Started With Making Pictures	330
13.2.2	Device-Independent Programming and OpenGL	331
13.2.3	Event-Driven Programming	331
13.2.4	Opening a Window for Drawing	333
13.2.5	Drawing Basic Graphics Primitives	334
13.2.6	Data Types and “States” in OpenGL	336
13.2.7	Establishing a Coordinate System	337
13.2.8	Making a Line Drawing	339
13.2.9	Other Graphics Primitives in OpenGL	343
13.2.10	Simple Interaction with Mouse and Keyboard	344
13.3	Drawing Tools	345
13.3.1	World Coordinates, World Windows, and Viewports	346
13.3.2	Mapping Between Window and Viewport	347
13.3.3	Line Clipping	352
13.3.4	Drawing Polygons, Circles, and Arcs Using OpenGL	354
13.3.5	Drawing Circles and Arcs	356
13.4	Transformation of Objects	357
13.4.1	Transformation	357
13.4.2	Affine Transformation	358
13.4.3	Drawing 3D Scenes Using OpenGL	363
13.5	Curve and Surface Design	365
13.5.1	Description of Curves	365
13.5.2	Designing Bezier Curves	369
13.5.3	The B-Spline Basis Function	377
13.5.4	Interpolation Technique	388
	Summary	391
	Exercises	392
	Objective Questions	392
	Answers	394
Index		395
