

CONTENTS

<i>Preface</i>	xiii
Chapter 1: Introduction to Python	1
Tools for Python	1
Python Installation	4
Setting the PATH Environment Variable (Windows Only)	4
Launching Python on Your Machine	5
Python Identifiers	6
Lines, Indentation, and Multilines	6
Quotation and Comments in Python	7
Saving Your Code in a Module	9
Some Standard Modules in Python	10
The <code>help()</code> and <code>dir()</code> Functions	10
Compile Time and Runtime Code Checking	12
Simple Data Types in Python	12
Working With Numbers	12
Working With Fractions	16
Unicode and UTF-8	17
Working With Unicode	17
Working With Strings	18
Uninitialized Variables and the Value <code>None</code> in Python	21
Slicing and Splicing Strings	22
Search and Replace a String in Other Strings	23
Remove Leading and Trailing Characters	25

Printing Text Without NewLine Characters	26
Text Alignment	27
Working With Dates	28
Exception Handling in Python	30
Handling User Input	32
Command-Line Arguments	34
Summary	35
Chapter 2: Conditional Logic in Python	37
Precedence of Operators in Python	37
Python Reserved Words	38
Working With Loops in Python	38
Nested Loops	42
The <code>split()</code> Function With <code>for</code> Loops	42
Using the <code>split()</code> Function to Compare Words	43
Using the <code>split()</code> Function to Print Justified Text	44
Using the <code>split()</code> Function to Print Fixed Width Text	45
Using the <code>split()</code> Function to Compare Text Strings	47
Using the <code>split()</code> Function to Display Characters in a String	48
The <code>join()</code> Function	49
Python <code>while</code> Loops	49
Conditional Logic in Python	50
The <code>break/continue/pass</code> Statements	51
Comparison and Boolean Operators	52
Local and Global Variables	53
Scope of Variables	54
Pass by Reference versus Value	56
Arguments and Parameters	57
Using a <code>while</code> Loop to Find the Divisors of a Number	57
User-Defined Functions in Python	60
Specifying Default Values in a Function	61
Functions With a Variable Number of Arguments	62
Summary	63

Chapter 3:	Data Structures in Python	65
	Working With Lists	65
	Sorting Lists of Numbers and Strings	71
	Concatenating a List of Words	72
	The Python range() Function	73
	Lists and the append() Function	75
	Working With Lists and the split() Function	76
	Counting Words in a List	77
	Iterating Through Pairs of Lists	77
	List Slices	78
	Other List-Related Functions	80
	Working With Vectors	82
	Working With Matrices	83
	Queues	84
	Tuples (Immutable Lists)	84
	Sets	85
	Dictionaries	87
	Dictionary Functions and Methods	90
	Ordered Dictionaries	90
	Other Sequence Types in Python	92
	Mutable and Immutable Types in Python	93
	Packing/Unpacking Sequences	95
	Lambda Expressions	96
	Functional Programming in Python: The map() Function	97
	Functional Programming in Python: The filter() Function	104
	Summary	106
Chapter 4:	Strings and Arrays	107
	Time and Space Complexity	108
	Task: Maximum and Minimum Powers of an Integer	109
	Task: Binary Substrings of a Number	110
	Task: Common Substring of Two Binary Numbers	112
	Task: Multiply and Divide via Recursion	113
	Task: Sum of Prime and Composite Numbers	115

Task: Count Word Frequencies	117
Task: Check if a String Contains Unique Characters	119
Task: Insert Characters in a String	120
Task: String Permutations	122
Task: Find All Subsets of a Set	123
Task: Check for Palindromes	125
Task: Check for Longest Palindrome	128
Working With Sequences of Strings	130
Task: Longest Sequences of Substrings	133
Working With 1D Arrays	138
Task: Invert Adjacent Array Elements	139
Working With 2D Arrays	140
The Transpose of a Matrix	141
Search Algorithms	143
Well-Known Sorting Algorithms	148
Merge Sort	151
Summary	162
Chapter 5: Built-In Functions and Custom Classes	163
A Python Module versus Package	163
Python Functions versus Methods	164
Functionally Oriented Programming in Python	165
Importing Custom Python Modules	167
How to Create Custom Classes	169
Construction and Initialization of Objects	170
Compiled Modules	170
Classes, Functions, and Methods in Python	171
Accessors and Mutators versus @property	172
Creating an Employee Custom Class	172
Working With a List of Employees	174
Working With Linked Lists in Python	176
Custom Classes and Linked Lists	177

Custom Classes and Dictionaries	179
Custom Classes and Priority Queues	180
Overloading Operators	182
Serialize and Deserialize Data	183
Encapsulation	184
Single Inheritance	184
A Concrete Example of Inheritance	186
Inheritance and Overriding Methods	190
Multiple Inheritance	190
Polymorphism	193
The Python abc Module	194
Summary	195
Chapter 6: Recursion and Combinatorics	197
What Is Recursion?	198
Arithmetic Series	198
Geometric Series	202
Factorial Values	205
Fibonacci Numbers	208
Task: Reverse an Array of Strings via Recursion	210
Task: Check for Balanced Parentheses	212
Task: Calculate the Number of Digits	213
Task: Determine if a Positive Integer is Prime	214
Task: Find the Prime Factorization of a Positive Integer	216
Task: Goldbach's Conjecture	218
Task: Calculate the GCD (Greatest Common Divisor)	220
Task: Calculate the LCM (Lowest Common Multiple)	223
What Is Combinatorics?	225
Task: Calculate the Sum of Binomial Coefficients	227
The Number of Subsets of a Finite Set	229
Summary	230
<i>Appendix: Introduction to Pandas</i>	231
<i>Index</i>	273
