

CONTENTS

<i>Preface</i>	xxix
CHAPTER 1: THE LANGUAGE OF PHYSICS	1
1.0 Introduction	1
1.1 The SI System of Units	1
1.1.1 Derived Units	2
1.1.2 Energy	2
1.1.3 Viscosity	3
1.2 Dimensions	3
1.2.1 Method of Dimensions	4
1.3 Scientific Notation, Prefixes, and Significant Figures	5
1.4 Uncertainties	6
1.4.1 Types of Uncertainty	7
1.4.2 Combining Uncertainties	7
1.5 Dealing with Random and Systematic Experimental Errors	8
1.5.1 Random Errors	9
1.5.2 Systematic Errors	9
1.6 Differential Calculus	9
1.6.1 Derivatives and Rates of Change	9
1.6.1.1 Second Derivatives	11
1.6.2 Maximum and Minimum Values	12

1.7	Differential Equations	13
1.8	Integral Calculus	15
1.9	Vectors and Scalars	16
1.9.1	Adding Vectors	16
1.9.2	Resolving Vectors into Components	17
1.9.3	Multiplying Vectors	18
1.9.3.1	Scalar Product	18
1.9.3.2	Vector Product	19
1.10	Symmetry Principles	19
1.11	Exercises	22
CHAPTER 2:	REPRESENTING AND ANALYZING DATA	25
2.0	Introduction	25
2.1	Experimental Variables	25
2.2	Recording Data	26
2.3	Straight-Line Graphs	28
2.3.1	Interpreting Straight-Line Graphs	28
2.3.2	Analyzing Straight-Line Graphs	28
2.4	Plotting Graphs and Using Error Bars	29
2.4.1	Plotting Graphs by Hand	29
2.4.2	Finding a Gradient from a Straight-Line Graph	30
2.4.3	Using a Spreadsheet Program (e.g., Excel)	31
2.4.4	Using Error Bars	32
2.5	Logarithms	33
2.5.1	Logarithmic Scales and Logarithms	33
2.5.2	Using Logarithms	34
2.6	Testing Mathematical Relationships between Variables	35
2.6.1	Direct Proportion	35
2.6.2	Inverse Proportion	35
2.6.3	Inverse-Square Law	36
2.6.4	Power Law	36
2.6.5	Exponential Decay or Growth	36
2.7	Exercises	37

CHAPTER 3: CAPTURING, DISPLAYING, AND ANALYZING MOTION	41
3.0 Introduction	41
3.1 Motion Terminology	41
3.2 Graphs of Motion	42
3.3 Equations of Motion for Constant Acceleration: The <i>Suvat</i> Equations	44
3.3.1 Derivation 1: From Graphs of Motion	44
3.3.2 Derivation 2: Using Calculus	45
3.4 Projectile Motion	46
3.4.1 Independence of Horizontal and Vertical Components of Motion	46
3.4.2 Parabolic Paths	46
3.4.3 The Range of a Projectile	47
3.5 Equation of Motion	48
3.6 Methods to Capture and Display Graphs of Motion	49
3.6.1 Motion Sensors and Dataloggers	49
3.6.2 Light Gates	49
3.6.3 Mobile Phones and Tablets	51
3.6.3.1 Accelerometer Sensor	51
3.6.3.2 Video Capture	51
3.7 Exercises	53
CHAPTER 4: FORCES AND EQUILIBRIUM	55
4.1 Force as a Vector	55
4.1.1 Free-Body Diagrams	55
4.1.2 Resolving Forces	56
4.1.3 Finding a Resultant Force	56
4.2 Mass, Weight, and Center of Gravity	58
4.2.1 Mass	58
4.2.2 Weight	58
4.2.3 Center of Gravity	59

4.3	Equilibrium of Coplanar Forces	61
4.3.1	Using the Triangle of Forces to Solve Equilibrium Problems	61
4.3.2	Resolving Forces to Solve Equilibrium Problems	63
4.4	Turning Effects of a Force: Moments, Torques, and Couples	63
4.4.1	Moments and Torques	63
4.4.2	Resultant Moment	64
4.4.3	Couples	65
4.4.4	The Principle of Moments	66
4.5	Stability	68
4.5.1	Types of Mechanical Equilibrium	68
4.5.2	Degrees of Stability	69
4.6	Frictional Forces	70
4.6.1	The Origin of Frictional Forces Between Surfaces in Contact	71
4.6.2	Static and Dynamic (Kinetic) Friction	72
4.6.3	The Coefficients of Friction	72
4.6.4	Measuring the Coefficient of Static Friction	73
4.6.5	Measuring the Coefficient of Dynamic (Kinetic) Friction	74
4.7	Exercises	75
CHAPTER 5: NEWTONIAN MECHANICS		79
5.0	Introduction	79
5.1	Newton's Laws of Motion	79
5.1.1	Newton's First Law of Motion	79
5.1.2	Galilean Relativity	80
5.1.3	Newton's Second Law of Motion	81
5.1.4	Free Fall	82
5.1.5	Newton's Third Law of Motion	84
5.2	Linear Momentum	86
5.2.1	Newton's Second Law in Terms of Linear Momentum	86
5.2.2	Impulse and Change of Momentum	87
5.2.3	Conservation of Linear Momentum	87
5.3	Work Energy and Power	90
5.3.1	Work	91

5.3.2	Gravitational Potential Energy Changes (Uniform Field)	92
5.3.3	Kinetic Energy	93
5.3.4	The Law of Conservation of Energy	94
5.3.5	Energy and Momentum in a 2D Collision	95
5.3.6	Energy Transfers	96
5.3.7	Power	97
5.4	Energy Resources	98
5.5	Propulsion Systems	99
5.5.1	Jet Propulsion	99
5.5.2	Rockets	100
5.5.3	Radiation Pressure	102
5.6	Frames of Reference	102
5.6.1	The Center of Mass Frame	104
5.6.2	The Galilean Transformation	105
5.7	Theoretical Mechanics	106
5.7.1	Force and Energy	106
5.7.2	Lagrangian Mechanics	107
5.8	Exercises	109
CHAPTER 6:	FLUIDS	111
6.0	Introduction	111
6.1	Hydrostatic Pressure	112
6.1.1	Excess Pressure Caused by a Column of Fluid	112
6.1.2	Atmospheric Pressure	113
6.1.3	Using a Manometer to Measure Pressure Differences	114
6.1.4	Barometers	115
6.1.5	Dams	116
6.2	Buoyancy and Archimedes Principle	118
6.2.1	Buoyancy Forces	118
6.2.2	Archimedes' Principle	118
6.2.3	Flotation	119
6.3	Viscosity	120
6.3.1	The Coefficient of Viscosity	120

6.4	Fluid Flow	121
6.4.1	Laminar and Turbulent Flow	121
6.4.2	The Equation of Continuity	122
6.4.3	Drag Forces in a Fluid	122
6.4.4	Stokes' Law	123
6.4.5	Turbulent Drag	124
6.4.6	The Bernoulli Equation	125
6.4.7	The Bernoulli Effect	126
6.4.8	Viscous Flow Through a Horizontal Pipe – The Poiseuille Equation	126
6.4.9	Measuring the Coefficient of Viscosity	129
6.5	Measuring Fluid Flow Rates	130
6.5.1	A Venturi Meter	130
6.5.2	A Pitot Tube	131
6.6	Exercises	132
CHAPTER 7: MECHANICAL PROPERTIES		137
7.1	Density	137
7.2	Inter-atomic Forces	138
7.3	Stretching Springs	140
7.3.1	The Spring Constant	140
7.3.2	Springs in Series and in Parallel	141
7.3.3	Elastic Potential Energy (Strain Energy)	142
7.4	Stress and Strain	143
7.4.1	The Young's Modulus	144
7.4.2	Experimental Measurement of Young's Modulus for a Metal Wire	145
7.4.3	Stress Versus Strain Graph for a Ductile Metal	147
7.4.4	Rubber Hysteresis	148
7.5	Material Terminology	149
7.6	Material Types	150
7.7	Exercises	151

CHAPTER 8: THERMAL PHYSICS	155
8.0 Introduction	155
8.1 Thermal Equilibrium	155
8.2 Measuring Temperature	156
8.3 Temperature Scales	156
8.4 Heat Transfer Mechanisms	158
8.4.1 Conduction	158
8.4.2 Convection	160
8.4.3 Radiation	160
8.5 Black Body Radiation	161
8.6 Heat Capacities	162
8.6.1 Specific Heat Capacity	162
8.6.2 Molar Heat Capacities of Gases	163
8.6.3 Measuring Specific Heat Capacity	164
8.7 Specific Latent Heat	165
8.8 Exercises	166
CHAPTER 9: GASES	169
9.1 The Gas Laws	169
9.1.0 Introduction	169
9.1.1 Boyle's Law	169
9.1.2 Charles's Law	171
9.1.3 Gay Lussac's Law (The Pressure Law)	172
9.2 The Ideal Gas Equation	173
9.3 The Kinetic Theory of Gases	174
9.3.1 Assumptions of the Kinetic Theory	174
9.3.2 Explaining Gas Pressure	174
9.3.3 Molecular Kinetic Energy and Temperature	177
9.3.4 Molar Heat Capacities of an Ideal Monatomic Gas	178
9.3.5 Equipartition of Energy	179
9.3.6 The Law of Dulong and Petit	180
9.3.7 Graham's Law of Diffusion	181
9.3.8 The Speed of Sound in a Gas	181

9.4	The Maxwell Distribution	181
9.5	The Boltzmann Factor and Activation Processes	183
9.6	The First Law of Thermodynamics	185
9.6.1	Internal Energy	185
9.6.2	Heating, Working, and the First Law of Thermodynamics	185
9.6.3	Work Done by an Ideal Gas	186
9.6.4	Thermodynamic Changes	186
9.7	Heat Engines and Indicator Diagrams	188
9.7.1	What Is a Heat Engine?	188
9.7.2	Indicator Diagrams	189
9.7.3	The Otto Cycle	190
9.7.4	The Diesel Cycle	193
9.8	Exercises	194
CHAPTER 10: STATISTICAL THERMODYNAMICS AND THE SECOND LAW		199
10.0	Introduction	199
10.1	Reversible and Irreversible Processes	199
10.2	The Second Law of Thermodynamics as a Macroscopic Principle	201
10.2.1	Macroscopic Statements of the Second Law	201
10.2.2	Heat Transfer and Entropy	202
10.2.3	Entropy and Maximum Efficiency of a Heat Engine	203
10.3	Entropy and Number of Ways	205
10.3.1	Macro-state and Micro-states	205
10.3.2	Entropy and Number of Ways	208
10.3.3	Poincaré Recurrence	209
10.4	What Is Temperature?	209
10.5	Absolute Zero and Absolute Entropy	210
10.5.1	Entropy at Absolute Zero	210
10.5.2	Calculating Absolute Entropy	210
10.5.3	Entropy Changes for an Ideal Gas	211
10.6	Refrigerators and Heat Pumps	212
10.6.1	Refrigerators	212
10.6.2	Heat Pumps	214

10.7 Implications of the Second Law	214
10.7.1 The Second Law, the Arrow of Time, and the Universe	214
10.7.2 The Second Law and Living Things	215
10.7.3 Entropy and Energy Availability	215
10.8 Exercises	216
CHAPTER 11: OSCILLATIONS	219
11.0 Oscillations	219
11.1 Capturing and Displaying Oscillatory Motion	219
11.1.1 Graphs and Equations of Displacement, Velocity, and Acceleration	221
11.1.2 Phase and Phase Difference	223
11.2 Simple Harmonic Motion	223
11.2.1 Equation of Motion for Simple Harmonic Motion	223
11.2.2 Physical Conditions for Simple Harmonic Motion	224
11.3 The Mass-Spring Oscillator	224
11.4 The Simple Pendulum	225
11.5 Energy in Simple Harmonic Motion	227
11.5.1 Variation of Energy with Time	227
11.5.2 Variation of Energy with Position	228
11.5.3 Damping	229
11.6 Forced Oscillations and Resonance	230
11.7 Exercises	231
CHAPTER 12: ROTATIONAL DYNAMICS	235
12.0 Introduction	235
12.1 Angles	235
12.1.1 Measuring Angles in Radians	235
12.1.2 Small Angle Approximations	236
12.2 Describing Uniform Circular Motion	237
12.2.1 Angular Displacement, Angular Velocity, and Angular Acceleration	237
12.3 Centripetal Acceleration and Centripetal Force	238
12.3.1 Centripetal Acceleration	238
12.3.2 Centripetal Force	239

12.3.3 Centripetal Not Centrifugal	239
12.3.4 Moving in Uniform Circular Motion	241
12.4 Circular Motion, Simple Harmonic Motion, and Phasors	244
12.5 Rotational Kinematics	246
12.5.1 Equations for Uniform Angular Acceleration	246
12.5.2 Rotational Kinetic Energy	247
12.5.3 Angular Momentum	249
12.5.4 The Second Law of Motion for Rotation.	250
12.5.5 Conservation of Angular Momentum	252
12.6 Deriving Expressions for Moments of Inertia	252
12.6.1 Moment of Inertia of One or More Point Masses	252
12.6.2 Moment of Inertia of a Rod	253
12.6.3 Moment of Inertia of a Cylindrical Shell and a Uniform Cylinder	254
12.6.4 Moment of Inertia of a Uniform Sphere	255
12.7 Torque Work and Power	256
12.8 Rotational Oscillations, the Compound Pendulum	256
12.9 Exercises	258
CHAPTER 13: WAVES	263
13.0 Introduction	263
13.1 Describing and Representing Waves	263
13.1.1 Basic Wave Terminology	263
13.1.2 Transverse and Longitudinal Waves	265
13.1.3 Graphs of Wave Motion	267
13.1.4 Equation for a One-Dimensional Traveling Wave	267
13.1.5 Amplitude and Intensity	269
13.2 Reflection	269
13.3 Refraction	270
13.3.1 Refraction at a Boundary Between Two Different Media	270
13.3.2 Snell's Law of Refraction	271

13.3.3 Absolute and Relative Refractive Indices	274
13.3.4 Total Internal Reflection	274
13.3.5 Optical Fibers	275
13.3.6 Dispersion	276
13.4 Polarization	277
13.4.1 What Is Polarization?	277
13.4.2 Polarizing Filters	277
13.4.3 Rotation of the Plane of Polarization	279
13.4.4 Polarization by Reflection and Scattering	280
13.5 Exercises	281
CHAPTER 14: LIGHT	285
14.1 Light as an Electromagnetic Wave	285
14.1.1 Waves or Particles?	285
14.1.2 Electromagnetism	285
14.1.3 Electromagnetic Waves	286
14.1.4 Measuring the Speed of Light	288
14.1.5 Maxwell's Equations and the Speed of Light	290
14.1.6 Defining Speed, Time, and Distance	291
14.2 Ray Optics	291
14.2.1 Thin Lenses	291
14.2.2 Predictable Rays for Thin Lenses	293
14.2.3 Images	294
14.2.4 Image Formation with a Convex Lens	294
14.2.5 Image Formation with a Concave Lens	296
14.2.6 Object at Infinity	297
14.2.7 The Lens Equation	298
14.2.8 Virtual Image Formed by a Plane Mirror	299
14.2.9 Real and Apparent Depth	300
14.3 Optical Instruments	301
14.3.1 An Astronomical Refracting Telescope	301
14.3.2 An Astronomical Reflecting Telescope (Newtonian Telescope)	302
14.3.3 A Compound Microscope	304

14.4 The Doppler Effect	304
14.4.1 The Doppler Effect for Electromagnetic Waves	305
14.4.2 “Red Shift” and “Blue Shift”	306
14.5 Exercises	307
CHAPTER 15: SUPERPOSITION EFFECTS	311
15.0 Superposition Effects	311
15.1 Two-Source Interference	311
15.1.1 Demonstrating Superposition Effects with Sound	312
15.1.2 Demonstrating Superposition Effects with Light	314
15.1.3 Using the Double Slit Experiment to Find the Wavelength of Light	315
15.1.4 Superposition of Harmonic Waves	316
15.2 Diffraction Gratings	318
15.2.1 The Diffraction Grating Formula	319
15.2.2 Spectroscopy	323
15.2.3 Spectrometers	325
15.3 Diffraction by Slits and Holes	326
15.3.1 Diffraction by a Narrow Slit	326
15.3.2 Analysis of the Single Slit Diffraction Pattern	327
15.3.3 Diffraction Through a Circular Hole	329
15.3.4 Resolving Power and the Rayleigh Criterion	330
15.4 Standing (Stationary) Waves	331
15.4.1 Standing Waves on a String (Melde’s Experiment)	331
15.4.2 The Mathematics of Standing Waves	334
15.5 Exercises	335
CHAPTER 16: SOUND	339
16.1 The Nature and Speed of Sound	339
16.2 The Decibel Scale	340
16.3 Standing Waves in Air Columns	341
16.4 Measuring the Speed of Sound	343
16.5 Ultrasound	344
16.6 Analysis and Synthesis of Sound	345
16.7 Exercises	346

CHAPTER 17: ELECTRIC CHARGE AND ELECTRIC FIELDS	349
17.1 Electric Charge	349
17.2 Electrostatics	350
17.2.1 Charging by Friction	350
17.2.2 The Gold Leaf Electroscope	351
17.2.3 Using a Coulomb Meter	353
17.3 Electrostatic Forces	354
17.3.1 Coulomb's Law	354
17.3.2 Investigating Electrostatic Forces	355
17.4 The Electric Field	356
17.4.1 Electric Field Strength	356
17.4.2 Electric Field Strength of a Point Charge	358
17.4.3 Gauss's Law	359
17.4.4 Using Gauss's Theorem	361
17.5 Electric Potential Energy and Electric Potential	362
17.5.1 Electric Potential and Potential Difference	363
17.5.2 Electric Potential Gradient and Electric Field Strength	363
17.5.3 Accelerating Charged Particles in an Electric Field	365
17.5.4 Deflecting Charged Particles in an Electric Field	366
17.5.5 The Absolute Electric Potential of a Point Charge	367
17.6 Exercises	369
CHAPTER 18: DC ELECTRIC CIRCUITS	373
18.0 Direct Current (DC) Circuits and Conventional Current	373
18.1 Charge and Current	374
18.1.1 Charge Carriers and Charge Carrier Density	374
18.1.2 Measuring Current	375
18.1.3 Currents in Circuits – Kirchhoff's First Law	376
18.2 Measuring Potential Difference	377
18.2.1 EMF Potential Difference and Voltage	377
18.2.2 Kirchhoff's Second Law	378
18.3 Resistance	379
18.3.1 Measuring Resistance	380

18.3.2 Current–Voltage Characteristics	382
18.3.3 Resistors in Series and in Parallel	386
18.3.4 Resistivity	388
18.4 Electrical Energy and Power	389
18.4.1 EMF and Internal Resistance of a Real Cell	390
18.4.2 Measuring the Internal Resistance and emf of a Cell	391
18.4.3 Power Transfer from a Real Cell to a Load Resistor	392
18.5 Resistance Networks	394
18.5.1 Potential Dividers	394
18.5.2 Using Kirchhoff's Laws to Solve Resistance Networks	395
18.6 Semiconductors and Superconductors	396
18.6.1 Semiconductors	396
18.6.2 Variation of Resistance of a Metal with Temperature	397
18.7 Exercises	398
CHAPTER 19: CAPACITANCE	403
19.1 What Is a Capacitor?	403
19.1.1 Capacitors and Charge	403
19.1.2 Capacitance	405
19.1.3 Energy Stored on a Charged Capacitor	406
19.1.4 Efficiency of Charging a Capacitor	407
19.2 The Parallel Plate Capacitor	408
19.3 Capacitor Charging and Discharging	408
19.3.1 Equations for Capacitor Discharge	409
19.3.2 Equations for Capacitor Charging	411
19.4 Capacitors in Series and Parallel	412
19.4.1 Capacitance of Capacitors in Series	412
19.4.2 Capacitors in Parallel	413
19.5 The Capacitance of a Charged Sphere	413
19.6 Exercises	414
CHAPTER 20: MAGNETIC FIELDS	417
20.0 The Magnetic Field	417
20.1 Permanent Magnets	419

20.2	Magnetic Forces on Electric Currents and Moving Charges	420
20.2.1	The Magnetic Force on an Electric Current	420
20.2.2	The Force on a Moving Charge	422
20.2.3	The Path of a Moving Charged Particle in a Magnetic Field	423
20.2.4	The Velocity-Selector: Crossed Electric and Magnetic Fields	424
20.3	The Magnetic Fields Created by Electric Currents	427
20.3.1	The Biot–Savart Law	427
20.3.2	The Magnetic Field at the Center of a Narrow Coil	427
20.3.3	The Magnetic Field of a Long Straight Current-Carrying Wire	429
20.3.4	The Magnetic Field Along the Axis of a Solenoid	430
20.3.5	Ampère’s Theorem	431
20.4	Electric Motors	432
20.4.1	The Turning Effect on a Coil in a Uniform Magnetic Field	432
20.4.2	A Simple DC Electric Motor	433
20.5	Exercises	434
CHAPTER 21:	ELECTROMAGNETIC INDUCTION	437
21.1	Induced emfs	437
21.1.1	What Is Electromagnetic Induction?	437
21.1.2	Electromagnetic Induction Experiments	438
21.2	The Laws of Electromagnetic Induction	441
21.2.1	Magnetic Flux and Magnetic Flux Linkage	441
21.2.2	Faraday’s Law of Electromagnetic Induction	443
21.2.3	Changing the Flux-Linkage in a Coil	445
21.3	Inductance	446
21.3.1	Self-inductance	446
21.3.2	The Rise of Current in an Inductor	447
21.3.3	The Energy Stored in an Inductor	448
21.3.3	Mutual Inductance	448
21.4	Transformers	449
21.4.1	An Ideal Transformer	450
21.4.2	Transmission of Electrical Energy	451
21.4.3	Real Transformers	452

21.5 A Simple AC Generator	453
21.6 Electromagnetic Damping	454
21.7 Induction Motors	456
21.8 Exercises	458
CHAPTER 22: AC	463
22.1 AC and DC	463
22.1.1 AC Power and rms Values	464
22.2 Resistance and Reactance	465
22.2.1 Resistors in AC Circuits	465
22.2.2 Capacitors in AC Circuits	466
22.2.3 Inductors in AC Circuits	467
22.3 Resistance, Reactance, and Impedance	469
22.3.1 Phasor Diagrams for AC Series Circuits	469
22.3.2 Impedance	470
22.4 AC Series Circuits	471
22.4.1 RC Series Circuit	471
22.4.2 RL Series Circuit	472
22.4.3 RCL Series Circuit	473
22.4.4 Parallel Circuits Containing Resistors, Capacitors, and Inductors	475
22.5 Electric Oscillators	476
22.5.1 A Mechanical Analogy	478
22.6 Exercises	479
CHAPTER 23: THE GRAVITATIONAL FIELD	483
23.1 Gravitational Forces and Gravitational Field Strength	483
23.1.1 Newton's Law of Gravitation	483
23.1.2 Gravitational Field Strength	484
23.1.3 The Gravitational Field Strength of the Earth	486
23.2 Gravitational Potential Energy and Gravitational Potential	487
23.2.1 Change in Gravitational Potential Energy	488
23.2.2 Gravitational Potential	489
23.2.3 Gravitational Field Lines and Equipotentials	490

23.2.4 Gravitational Potential Energy in the Earth's Field	491
23.2.5 Escape Velocity	492
23.3 Orbital Motion	494
23.3.1 Early Ideas About Planetary Motion	495
23.3.2 Circular Orbits	496
23.3.3 Artificial Satellites	498
23.4 Tidal Forces	499
23.4.1 The Origin of Tidal Forces	499
23.4.2 The Earth's Ocean Tides	501
23.5 Einstein's Theory of Gravitation	503
23.5.1 Space–Time Curvature	504
23.5.2 The Equivalence Principle	505
23.5.3 Gravitational Time Dilation	506
23.5.4 Gravitational Waves	508
23.6 Exercises	510
CHAPTER 24: SPECIAL RELATIVITY	513
24.1 The Postulates of Special Relativity	513
24.1.1 Absolute Space	513
24.1.2 Einstein's Ideas About the Laws of Physics	516
24.2 Time in Special Relativity	517
24.2.1 Time Dilation	517
24.2.2 The “Twin Paradox”	521
24.2.3 The Relativity of Simultaneity	522
24.3 Length Contraction	523
24.4 The Lorentz Transformation	524
24.4.1 The Lorentz Transformation Equations	525
24.4.2 The Velocity Addition Equation	526
24.5 Mass, Velocity, and Energy	527
24.5.1 Mass and Velocity	527
24.5.2 Mass and Energy	528

24.6 Special Relativity and Geometry	529
24.6.1 Invariants	530
24.6.2 Space–Time	531
24.6.3 Mass, Energy, and Momentum	533
24.7 Exercises	534
CHAPTER 25: ATOMIC STRUCTURE AND RADIOACTIVITY	537
25.1 The Nuclear Atom	537
25.1.1 The Rutherford Scattering Experiment	537
25.1.2 Closest Approach and Nuclear Size	539
25.1.3 Using Electron Diffraction to Measure Nuclear Diameter	540
25.1.4 The Nuclear Atom	541
25.2 Ionizing Radiation	542
25.2.1 Types of Ionizing Radiation Emitted by Radioactive Sources	542
25.3 Attenuation of Ionizing Radiation	543
25.3.1 Inverse-Square Law of Absorption	543
25.3.2 Exponential Absorption and the Attenuation Coefficient	544
25.3.3 Absorption of Beta Radiation	546
25.3.4 Absorption of Alpha Particles	547
25.4 The Biological Effects of Ionizing Radiation	547
25.4.1 The Natural Background Radiation	548
25.4.2 Measuring Radiation Dose	549
25.4.3 The Effect of Radiation Dose on Human Health	550
25.4.4 Reducing Risks in the Laboratory	550
25.5 Radioactive Decay and Half-Life	551
25.6 Nuclear Transformations	554
25.6.1 Alpha Decay	554
25.6.2 Beta-Minus Decay	554
25.6.3 Gamma Emission	555
25.6.4 Beta-Plus Emission	556
25.6.5 Electron-Capture	557

25.7 Radiation Detectors	557
25.7.1 The Spark Counter	558
25.7.2 The Geiger Counter	558
25.7.3 Using a Geiger Counter to Measure Count Rates	560
25.8 Using Radioactive Sources	561
25.8.1 Radiological Dating	561
25.8.2 Radiological Dating of Rocks	562
25.9 Exercises	563
CHAPTER 26: NUCLEAR PHYSICS	567
26.1 Nuclear Energy Changes	567
26.1.1 Nuclear Binding Energy	567
26.1.2 Atomic Mass Units (amu)	569
26.1.3 Energy Released by Nuclear Decays	569
26.2 Nuclear Stability	571
26.2.1 Nuclear Configuration and Stability	571
26.2.2 Nuclear Binding Energy and Stability	573
26.3 Nuclear Fission and Nuclear Fusion	574
26.3.1 Nuclear Fission	575
26.3.2 The Principle of the Atomic Bomb	576
26.3.3 Nuclear Reactors	578
26.3.4 Plutonium	580
26.3.5 Nuclear Fusion	580
26.3.6 Nucleosynthesis	581
26.3.7 Thermonuclear Weapons	583
26.3.8 Fusion Reactors	584
26.4 Particle Physics	586
26.4.1 Leptons	587
26.4.2 Hadrons and Quarks	587
26.4.3 The Fundamental Interactions	588
26.4.4 The Conservation Laws	590

26.4.5 The Standard Model	590
26.4.6 Dark Matter and Dark Energy	592
26.5 Exercises	593
CHAPTER 27: QUANTUM THEORY	597
27.1 Problems in Classical Physics	597
27.1.1 Planck and the Black Body Radiation Spectrum	599
27.1.2 Explaining Heat Capacities	600
27.1.3 Explaining the Photoelectric Effect	600
27.1.4 Characteristics of Photoelectric Emission	601
27.1.5 Measuring the Planck Constant	602
27.2 Matter Waves	605
27.2.1 The de Broglie Relation	605
27.2.2 Electron Diffraction	606
27.2.3 The Compton Effect	608
27.3 Wave-Particle Duality	609
27.3.1 Young's Double Slit Experiment Revisited	610
27.3.2 Interpreting Wave-Particle Duality	613
27.3.3 The Schrödinger Equation	614
27.4 The Quantum Atom	615
27.4.1 Bohr's Model of the Hydrogen Atom	616
27.4.2 Explaining the Hydrogen Line Spectrum	618
27.4.3 Electron Waves in Atoms	620
27.4.4 The Schrödinger Atom	621
27.5 Interpretations of Quantum Theory	625
27.5.1 The Copenhagen Interpretation	626
27.5.2 Heisenberg's Uncertainty (Indeterminacy) Principle	628
27.5.3 The Sum-Over-Histories Approach	630
27.5.4 The Many-Worlds Theory	632
27.5.5 Schrödinger's Cat	634
27.6 Exercises	635

CHAPTER 28: ASTROPHYSICS	639
28.0 Physics Astrophysics and Cosmology	639
28.1 Stars	640
28.1.1 Mass	640
28.1.2 Stars as Black Bodies	643
28.1.3 Stellar Spectra and the Hertzsprung–Russell Diagram	644
28.2 Distances	645
28.2.1 Trigonometric Parallax	645
28.2.2 The Inverse-Square Law and Cepheid Variables	646
28.2.3 Hubble’s Law	648
28.3 Cosmology	650
28.3.1 The Origin and Age of the Universe	650
28.3.2 Evidence for the Big Bang	652
28.4 Exercises	653
CHAPTER 29: MEDICAL PHYSICS	655
29.1 Ultrasound	655
29.1.1 Overview of Ultrasound	655
29.1.2 Ultrasound and the Eye	656
29.1.3 Doppler Ultrasound for Blood Flow Measurements	657
29.1.4 Using Ultrasound to Break Kidney Stones	658
29.2 X-rays	658
29.2.1 Overview of Medical X-rays	658
29.2.2 Generating X-Rays	659
29.2.3 Attenuation of X-Rays in Matter	661
29.2.4 Creating X-Ray Images	662
29.3 Magnetic Resonance Imaging (MRI)	664
29.3.1 Overview of MRI	664
29.3.2 The Physics of MRI	664
29.4 Radioactive Tracers	666
29.4.1 Overview of the Use of Radioactive Tracers	666
29.4.2 The Gamma-Camera	666

29.5 Positron Emission Tomography (PET Scans)	667
29.5.1 The Physics of PET Scans	667
29.6 Exercises	669
APPENDIX A: ESTIMATIONS AND FERMI QUESTIONS	671
A.0 Fermi and the Trinity Test	671
A.1 Making Estimations	673
A.1.1 How Many Air Molecules in the Earth's Atmosphere?	673
A.1.2 What Is the Minimum Area for a Parachute?	675
A.2 Useful Values	677
A.3 Fermi Questions	678
A.4 The Drake Equation	679
A.5 Try These: Estimates and Fermi Questions	680
APPENDIX B: EXPERIMENTAL INVESTIGATIONS	683
B.0 Introduction: The Nature of Science	683
B.1 Carrying Out an Experiment	684
B.1.1 Variables	685
B.1.2 Selecting Measuring Equipment	685
B.1.3 Planning a Procedure	687
B.1.4 Risk Assessments	687
B.1.5 Writing Up an Experiment	688
B.2 Investigations	690
APPENDIX C: UNITS, CONSTANTS, AND EQUATIONS	693
C.1 SI Units	693
C.2 Simple Approximate Combinations of Uncertainties	694
C.3 Useful Derivatives	694
C.4 Differential Equations	695
C.5 Differentials and Integrals	695
C.6 Equations	696
C.7 Constants	710
APPENDIX D: SOLUTIONS TO EXERCISES	711
GLOSSARY	737
INDEX	763
