

Acknowledgments

As the editors of this book, we are grateful for the help we received from many people, without whom this publication would not have been possible. Above all, we would like to thank Helmuth Trischler for his continued support for us to work on this project. We also thank the numerous colleagues from Canada, France, Germany, Britain, India, Israel, Japan, the Netherlands, and the United States—active in fields as diverse as toxicology, environmental history, chemistry, sociology, history of science, and philosophy—with whom we could collaborate while working on this book. It was also a great pleasure to discuss elements of the introduction with colleagues at the Science History Institute in Philadelphia, as well as during presentations at the Deutsches Museum in Munich, and at a Science, Technology and Society research meeting at Maastricht University. In particular, we would like to mention the comments by Karin Zachmann, Jens Lachmund, and Peter Morris. Last but not least, we thank the two referees of this book for their stimulating, informative, and thought-provoking comments. We very much thank the authors of the eleven studies published in this book for their valuable insights, for all the hard work that went into their chapters, and for their patience. Together with our introduction, the book covers a large domain, and occasionally we thought our project was perhaps a bit too ambitious. We have no doubt, though, that our book can and will stimulate further research on the history and current practices of (environmental) regulation, on the production of knowledge about chemicals and risks, and on the roles of politics, industry, and social movements in issues of human health and ecology.

It is with deep regret that we must announce the loss of two dear colleagues who passed away during the process of completing the book: Joost Mertens in June 2015, and Masanori Kaji in July 2016. We dedicate this book to their memory and to their loved ones.

Maastricht and Munich, November 2018
