

## Acknowledgments

The first thanks are due to Vera Bühlmann, who supervised the doctoral thesis of which this book is the natural outcome and without which this work—the first milestone of a cornucopian collaboration—would have never seen the light. I am grateful to her and TU Wien for supporting my research and prolonging such support in challenging times. I also wish to express my appreciation to Ludger Hovestadt for providing means and occasions of exchange and confrontation with the quintessential work led by the Chair of Digital Architectonics at ETH Zürich. Due thanks goes to Marco Biraghi, for having pushed me in such a direction for years and for his intellectual honesty; to Matteo Vegetti, for his kind encouragement; to Pier Paolo Tamburelli, for the care and the sense of responsibility he had

put in reading my dissertation; to Marcel Alexander Niggli, for his unwavering enthusiasm towards my efforts. I must extend my gratitude to those who kindly provided ways and occasions to develop and present the research that went into this book, within and beyond disciplinary boundaries: amongst them are Michael R. Doyle, Giacomo Pala, Karla Saldaña Ochoa, Georgios Tsagdis, Mihye An, Ingrid Mayrhofer-Hufnagl, and David Peleman. Thanks also to the team of the Research Unit for Architecture Theory and Philosophy of Technics—Cris Argüelles *in primis*—for helping set up this book as one of the very first volumes published within the Architectonics Books series. A last word of gratitude is owed to Mauro and Florencia, who got me into this whole trouble in the first place. Finally, I would like to thank those who supported me in various ways and those without whom the path of this work might have ended with just as much success but undoubtedly not as much joy.
