

Table of Contents

- 0. **Foreword** (p. iii)
- 1. **Science, Morals, and Philosophy** (p. 1)
- 2. **How and Why Does Science Develop?** (p. 7)
 - 2.1 Structure and agency
 - 2.2 Externalism and internalism
 - 2.3 Evolution and revolution
 - 2.4 The concept of paradigm
 - 2.5 Generating, testing, and having hypotheses accepted
- 3. **What Is a Scientific Fact?** (p. 43)
 - 3.1 Deceit and ideological pressure
 - 3.2 Perceptual structuring
 - 3.3 Collectively theory-laden observations
 - 3.4 Positivism: classical and modern
 - 3.5 The fallibilistic revolution
- 4. **What Does Scientific Argumentation Look Like?** (p. 91)
 - 4.1 Arguments ad hominem
 - 4.2 Deductive and inductive inferences
 - 4.3 Thought experiments and *reductio ad absurdum* arguments
 - 4.4 Hypothetico-deductive arguments
 - 4.5 Arguments from simplicity, beauty, and analogy
 - 4.6 Abductive reasoning and inferences to the best explanation
 - 4.7 Probabilistic inferences
 - 4.8 Harvey's scientific argumentation
 - 4.9 Has science proved that human bodies do not exist?
- 5. **Knowing How and Knowing That** (p. 155)
 - 5.1 Tacit knowledge
 - 5.2 Improving know-how
 - 5.3 Interaction between knowing-how and knowing-that
 - 5.3 Tacit knowledge in expert systems
 - 5.4 Tacit knowledge and fallibilism
- 6. **The Clinical Medical Paradigm** (p. 173)
 - 6.1 Man as machine
 - 6.2 Mechanism knowledge and correlation knowledge

- 6.3 The randomized control trial
- 6.4 Alternative medicine
- 7. **Placebo and Nocebo Phenomena** (p. 211)
 - 7.1 What is the placebo problem?
 - 7.2 Variables behind the placebo effect
 - 7.3 Specific and unspecific treatment
 - 7.4 The nocebo effect and psychosomatic diseases
 - 7.5 The ghost in the machine
 - 7.6 Biomedical anomalies
 - 7.7 *Helicobacter pylori* in the machine
- 8. **Pluralism and Medical Science** (p. 245)
 - 8.1 What is pluralism?
 - 8.2 Pluralism in science
 - 8.3 Methodological pluralism
 - 8.4 Pluralism from the patient's perspective
- 9. **Medicine and Ethics** (p. 267)
 - 9.1 Deontology
 - 9.2 Consequentialism
 - 9.3 Knowing how, knowing that, and fallibilism in ethics
 - 9.4 Virtue ethics
 - 9.5 Abortion in the light of different ethical systems
 - 9.6 Medical ethics and the four principles
- 10. **Medical Research Ethics** (p. 345)
 - 10.1 Is it unethical not to carry out medical research?
 - 10.2 The development of modern research ethics
 - 10.3 The Nuremberg Code and informed consent
 - 10.4 The Helsinki Declarations and research ethics committees
 - 10.5 Between cowboy ethics and scout morals: the CUDOS norms
- 11. **Taxonomy, Partonomy, and Ontology** (p. 401)
 - 11.1 What is it that we classify and partition?
 - 11.2 Taxonomy and the philosophy of science
 - 11.3 Taxonomy in the computer age – ontology as science
- Index of Names** (p. 464)
- Index of Subjects** (p. 468)

(The front cover contains a picture of *Helicobacter pylori*; see chapter 7.7.)
