Preface to the second edition — IX

Preface to the first edition — XI

1 Heuristics and history — 1

- 1.1 Feynman path integrals and Feynman–Kac formulae — 1
- 1.2 Plan and scope of the second edition — 5

2 Brownian motion — 9

- 2.1 Concepts and facts of general measure theory and probability — 9
 - 2.1.1 Elements of general measure theory — 9
 - 2.1.2 Probability measures and limit theorems — 16
 - 2.1.3 Random variables — 29
 - 2.1.4 Conditional expectation and regular conditional probability measures — 38
- 2.2 Random processes — 45
 - 2.2.1 Basic concepts and facts — 45
 - 2.2.2 Martingale properties — 50
 - 2.2.3 Stopping times and optional sampling — 53
 - 2.2.4 Markov properties — 67
 - 2.2.5 Feller transition kernels and generators — 72
 - 2.2.6 Invariant measures — 74
- 2.3 Brownian motion and Wiener measure — 77
 - 2.3.1 Construction of Brownian motion — 77
 - 2.3.2 Two-sided Brownian motion — 84
 - 2.3.3 Conditional Wiener measure — 88
 - 2.3.4 Martingale properties of Brownian motion — 89
 - 2.3.5 Markov properties of Brownian motion — 92
 - 2.3.6 Local path properties of Brownian motion — 97
 - 2.3.7 Global path properties of Brownian motion — 103
- 2.4 Stochastic calculus based on Brownian motion — 107
 - 2.4.1 The classical integral and its extensions — 107
 - 2.4.2 Stochastic integrals — 108
 - 2.4.3 Extension of stochastic integrals — 115
 - 2.4.4 Itô formula — 119
 - 2.4.5 Stochastic differential equations — 128
 - 2.4.6 Brownian bridge — 134
 - 2.4.7 Weak solution and time change — 136
 - 2.4.8 Girsanov theorem and Cameron–Martin formula — 140

3 Lévy processes — 143

- 3.1 Lévy processes and the Lévy–Khintchine formula — **143**
 - 3.1.1 Infinitely divisible random variables — **143**
 - 3.1.2 Lévy–Khintchine formula — **149**
 - 3.1.3 Lévy processes — **154**
 - 3.1.4 Martingale properties of Lévy processes — **160**
 - 3.1.5 Markov properties of Lévy processes — **161**
- 3.2 Sample path properties of Lévy processes — **165**
 - 3.2.1 Càdlàg version — **165**
 - 3.2.2 Two-sided Lévy processes — **169**
- 3.3 Random measures and Lévy–Itô decomposition — **178**
 - 3.3.1 Poisson random measures — **178**
 - 3.3.2 Lévy–Itô decomposition — **186**
- 3.4 Itô formula for semimartingales — **188**
 - 3.4.1 Point processes — **188**
 - 3.4.2 Itô formula for semimartingales — **194**
- 3.5 Exponentials of Lévy processes and recurrence properties — **201**
 - 3.5.1 Exponential functionals of Lévy processes — **201**
 - 3.5.2 Capacitary measures — **203**
 - 3.5.3 Recurrence properties of Lévy processes — **204**
- 3.6 Subordinators and Bernstein functions — **206**
 - 3.6.1 Subordinators and subordinate Brownian motion — **206**
 - 3.6.2 Bernstein functions — **209**

4 Feynman–Kac formulae — 217

- 4.1 Schrödinger semigroups — **217**
 - 4.1.1 Schrödinger equation and path integral solutions — **217**
 - 4.1.2 Linear operators and their spectra — **218**
 - 4.1.3 Spectral resolution — **223**
 - 4.1.4 Compact operators and trace ideals — **227**
 - 4.1.5 Schrödinger operators — **232**
 - 4.1.6 Schrödinger operators through quadratic forms — **236**
 - 4.1.7 Confining potentials and decaying potentials — **239**
 - 4.1.8 Strongly continuous operator semigroups — **243**
- 4.2 Feynman–Kac formula for Schrödinger operators — **246**
 - 4.2.1 Bounded smooth external potentials — **246**
 - 4.2.2 Derivation through the Trotter product formula — **249**
 - 4.2.3 Kato-class potentials — **251**
 - 4.2.4 Feynman–Kac formula for Kato-decomposable potentials — **264**
- 4.3 Properties of Schrödinger operators and semigroups — **270**
 - 4.3.1 Kernel of the Schrödinger semigroup — **270**
 - 4.3.2 Positivity improving and uniqueness of ground state — **271**

- 4.3.3 Degenerate ground state and Klauder phenomenon — **275**
- 4.3.4 Existence and non-existence of ground states — **277**
- 4.3.5 Sojourn times and existence of bound states — **282**
- 4.3.6 The number of eigenfunctions with negative eigenvalues — **289**
- 4.3.7 Application to canonical commutation relations — **307**
- 4.3.8 Exponential decay of eigenfunctions — **314**
- 4.4 Feynman–Kac formula for Schrödinger operators with vector potentials — **320**
- 4.4.1 Feynman–Kac–Itô formula — **320**
- 4.4.2 Alternative proof of the Feynman–Kac–Itô formula — **324**
- 4.4.3 Extension to singular external and vector potentials — **327**
- 4.4.4 Kato-class potentials and L^p - L^q boundedness — **333**
- 4.5 Feynman–Kac formula for unbounded semigroups and Stark effect — **335**
- 4.6 Feynman–Kac formula for relativistic Schrödinger operators — **339**
- 4.6.1 Relativistic Schrödinger operator — **339**
- 4.6.2 Relativistic Kato-class potentials — **344**
- 4.6.3 Decay of eigenfunctions — **351**
- 4.6.4 Non-relativistic limit — **356**
- 4.7 Feynman–Kac formula for Schrödinger operators with spin — **359**
- 4.7.1 Schrödinger operators with spin $\frac{1}{2}$ — **359**
- 4.7.2 A jump process — **361**
- 4.7.3 Feynman–Kac formula for the jump process — **363**
- 4.7.4 Extension to singular external potentials and singular vector potentials — **367**
- 4.7.5 Decay of eigenfunctions and martingale properties — **371**
- 4.8 Feynman–Kac formula for relativistic Schrödinger operators with spin — **375**
- 4.8.1 Relativistic Schrödinger operator with spin $\frac{1}{2}$ — **375**
- 4.8.2 Martingale properties — **381**
- 4.8.3 Decay of eigenfunctions — **384**
- 4.9 Feynman–Kac formula for nonlocal Schrödinger operators — **388**
- 4.9.1 Nonlocal Schrödinger operators — **388**
- 4.9.2 Vector potentials — **389**
- 4.9.3 Ψ -Kato-class potentials — **392**
- 4.9.4 Fractional Kato-class potentials — **401**
- 4.9.5 Generalized spin — **406**
- 4.9.6 Recurrence properties and existence of bound states — **412**
- 4.9.7 The number of eigenfunctions with negative eigenvalues — **413**
- 4.9.8 Decay of eigenfunctions — **423**
- 4.9.9 Massless relativistic harmonic oscillator — **432**
- 4.9.10 Embedded eigenvalues — **436**

5	Gibbs measures associated with Feynman–Kac semigroups — 449
5.1	Ground state transform and related processes — 449
5.1.1	Ground state transform and the intrinsic semigroup — 449
5.1.2	Ground state-transformed processes as solutions of SDE — 454
5.1.3	$P(\phi)_1$ -processes with continuous paths — 458
5.1.4	Dirichlet principle — 464
5.1.5	Mehler’s formula — 467
5.1.6	$P(\phi)_1$ -processes with càdlàg paths — 476
5.2	Gibbs measures on path space — 481
5.2.1	From Feynman–Kac formulae to Gibbs measures — 481
5.2.2	Gibbs measures on Brownian paths — 485
5.2.3	Gibbs measures on càdlàg paths — 492
5.3	Gibbs measures for external potentials — 494
5.3.1	Existence — 494
5.3.2	Uniqueness — 497
5.4	Gibbs measures for external and pair interaction potentials: direct method — 503
5.5	Gibbs measures for external and pair interaction potentials: cluster expansion — 511
5.5.1	Cluster representation — 511
5.5.2	Basic estimates and convergence of cluster expansion — 516
5.5.3	Further properties of the Gibbs measure — 518
6	Notes and references — 521
	Notes to the Preface — 521
	Notes to Chapter 1 — 522
	Notes to Chapter 2 — 522
	Notes to Chapter 3 — 525
	Notes to Chapter 4 — 526
	Notes to Chapter 5 — 535

Bibliography — 539

Index — 553
