Biographical Sketche of editor — IX

List of contributing authors — XI

Umesh Marathe, Meghashree Padhan, and Jayashree Bijwe

1 Tribology of carbon fabric-reinforced thermoplastic composites — 1

- 1.1 Introduction — 1
- 1.1.1 Polymer composites in tribology — 1
- 1.1.2 Types of FRP composites — 4
- 1.2 Tribology of CF-reinforced polymer composites — 7
- 1.2.1 Investigations on tribology of CFRPs (in-house data) — 8
- 1.2.2 Investigations on tribology of CFRPs – literature data — 23
- 1.3 Tribology of surface-engineered fabric-reinforced polymer composites — 25
- 1.4 Summary — 27

Ana Horovistiz, Susana Laranjeira, and J. Paulo Davim

2 Effect of glass fiber reinforcement and the addition of MoS₂ on the tribological behavior of PA66 under dry sliding conditions: A study of distribution of pixel intensity on the counterface — 31

- 2.1 Introduction — 31
- 2.2 Materials and methods — 33
- 2.3 Development of statistical criterion for distribution of pixel intensity on counterface surfaces — 34
- 2.4 Results and discussion — 35
- 2.5 Conclusions — 43

T.S. Kiran, S. Basavarajappa, M. Prasanna Kumar, B.M. Viswanatha, and J. Paulo Davim

3 A review on dry sliding wear behaviour of metal matrix composites — 47

- 3.1 Introduction — 47
- 3.2 Mechanical properties — 47
- 3.2.1 Hardness — 48
- 3.2.2 Tensile properties — 48
- 3.3 Wear behaviour — 48
- 3.3.1 As-cast — 49
- 3.3.2 Heat treatment — 53
- 3.4 Wear behaviour of MMCs by design of experiments — 58
- 3.4.1 Wear behaviour of MMCs — 58
- 3.4.2 Wear behaviour of HMMCs — 60
- 3.5 Conclusions — 60

G. Gautam, N. Kumar, A. Mohan, and S. Mohan

4 Tribology of aluminium matrix composites — 65

- 4.1 Introduction — 65
- 4.2 Wear of AMCs — 65
 - 4.2.1 Operating parameters — 66
 - 4.2.2 Environmental condition — 69
 - 4.2.3 Material property — 70
 - 4.2.4 Synthesis — 74
 - 4.2.5 Inclusions in mechanically mixed layer — 76
- 4.3 Friction of AMCs — 76
- 4.4 Conclusions — 77

Jinjun Lu, Xiaoqin Wen, Zhiqin Ding, Feiyan Yuwen, Junhu Meng, and Ruiqing Yao

5 Silver-based self-lubricating composite for sliding electrical contact: Material design, preparation, and properties — 81

- 5.1 Introduction — 81
- 5.2 Material design and preparation — 82
 - 5.2.1 What is silver-based self-lubricating composite? — 82
 - 5.2.2 Constitutions of the composite — 82
 - 5.2.3 Preparation — 85
 - 5.2.4 Material design — 85
- 5.3 Tribological properties — 87
 - 5.3.1 General view — 87
 - 5.3.2 Three important issues — 87
 - 5.3.3 Outlook — 88

Satheesan Bobby, Mohammed Mehdhar Al-Mehdhar, and Mohammed Abdul Samad

6 Tribology of CrC–NiCr cermet coatings — 91

- 6.1 Introduction — 91
- 6.2 Outline of thermal spraying processes and production of CrC–NiCr coatings — 93
 - 6.2.1 Various thermal spray techniques: An overview — 93
 - 6.2.2 Thermal spray techniques associated with CrC–NiCr coatings — 97
- 6.3 Recent developments in performance evaluation of CrC–NiCr coating systems — 97
 - 6.3.1 Tribological evaluation of CrC–NiCr coatings — 97
 - 6.3.2 Coating performance enhancement techniques — 117
 - 6.3.3 Coating performance under fatigue loading — 127
- 6.4 Summary — 129

Index — 137
