Preface — v

Contributing authors — xvii

Rajni Hatti-Kaul and Adel Abouhmad

1 Extremophiles: a promising source of novel natural products — 1

- 1.1 Tapping the potential of extremophiles for diverse bioactive compounds — **1**
- 1.2 Thermophiles — **2**
- 1.3 Cold adapted microbes — **5**
- 1.4 Halophiles — **9**
- 1.5 Marine extremophiles — **13**
- 1.6 Acidophiles — **18**
- 1.7 Alkaliphiles — **23**
- 1.8 Speeding up the discovery process — **26**
- References — **30**

Henry L. Stennett, Kavita Tiwari, Sam E. Williams, Paul Curnow and Paul R. Race

2 The extremophilic pharmacy: drug discovery at the limits of life — 43

- 2.1 Introduction — **43**
- 2.2 Microorganisms as a source of pharmaceutical leads — **43**
- 2.3 Categories of extremophiles — **45**
- 2.4 Life on the limit: how environmental conditions drive metabolic innovation — **46**
- 2.5 Lomaiviticins — **46**
- 2.6 Salinosporamide A — **50**
- 2.7 Marinostatin — **53**
- 2.8 Abyssomicin C — **56**
- 2.9 Macrolactins — **61**
- 2.10 Conclusions and future prospects — **64**
- References — **64**

Eva Nordberg Karlsson, Roya R.R. Sardari, Emanuel Y.C. Ron, Snaedis H. Bjornsdottir, Bjorn T. Adalsteinsson, Olafur H. Fridjonsson and Gudmundur O. Hreggvidsson

3 Metabolic engineering of thermophilic bacteria for production of biotechnologically interesting compounds — 73

- 3.1 Introduction — **73**
- 3.2 Increased interest in thermophilic systems in a circular bioeconomy — **74**

3.3	Genetic tools and transformation requirements for engineering in thermophiles — 77
3.3.1	Competence and transformation — 77
3.3.2	Vectors — 80
3.3.3	Selection markers — 81
3.3.4	Marker recycling — 81
3.3.5	CRISPR-Cas9 technology — 82
3.4	The importance of metabolic range – anaerobic/aerobic systems for different types of products — 83
3.4.1	<i>Thermoanaerobacterium</i> spp. for ethanol or 1,2-propandiol production — 85
3.4.2	<i>Geobacillus thermoglucosidasius</i> , a facultative organism engineered for ethanol production — 86
3.4.3	<i>Thermotoga</i> spp. and <i>Caldicellulosiruptor</i> bescii, with less developed engineering systems — 87
3.4.4	<i>Thermus thermophilus</i> and <i>Rhodothermus marinus</i> – natural pigment producers — 88
3.5	Future perspectives — 90
	References — 90

Giannina Espina, Paulina Cáceres-Moreno, Daniela Correa-Llantén, Felipe Sarmiento and Jenny M. Blamey

4	Extremozymes: from discovery to novel bio-products — 97
4.1	Abstract — 97
4.2	Biocatalysis benefits and barriers — 97
4.3	Extremozymes discovery and development functional roadmap — 99
4.4	Direct exploration of enzymatic activities — 101
4.4.1	Phase 1 – discovery — 101
4.4.2	Phase 2 – development — 104
4.4.3	Phase 3 – scale-up — 109
4.4.4	Phase 4 – production phase — 112
4.5	Conclusions — 115
	References — 116

Hans Jörg Kunte, Thomas Schwarz and Erwin A. Galinski

5	The compatible solute ectoine: protection mechanisms, strain development, and industrial production — 121
5.1	Introduction — 121
5.2	Molecular interaction of ectoine with water and biomolecules and its effect on solution properties — 123
5.2.1	Proteins — 123
5.2.2	Membranes — 125

- 5.2.3 Nucleic acids — **127**
- 5.2.4 Water relations — **129**
- 5.2.5 Solution properties and effects in combination with NaCl — **131**
- 5.2.6 Conclusion — **132**
- 5.3 Producer strains and fermentation processes — **134**
- 5.3.1 Ectoine biosynthesis – genes, enzymes, and regulation — **134**
- 5.3.2 Increased ectoine synthesis by improving the expression of *ectABC* — **136**
- 5.3.3 The “bacterial milking” procedure — **137**
- 5.3.4 The “leaky” mutant procedure (exploiting a mutant which excretes ectoine into the medium) — **138**
- 5.3.5 Mechanisms of ectoine export from *H. elongata* cells — **140**
- 5.3.6 Blocking ectoine degradation – the “super-leaky” mutant — **141**
- 5.4 Products — **143**
- References — **144**

Shin Haruta

- 6 Thermophilic photosynthesis-based microbial communities – energy production and conversion — 153**
- 6.1 Introduction — **153**
- 6.2 Thermophilic photosynthetic bacteria — **153**
- 6.2.1 Oxygenic photosynthetic bacteria – cyanobacteria – — **155**
- 6.2.2 Anoxygenic photosynthetic bacteria — **155**
- 6.3 Photosynthesis-based microbial communities in terrestrial hot springs — **156**
- 6.3.1 Bacterial and archaeal compositions of hot spring microbial mats — **157**
- 6.3.2 Layered structure — **157**
- 6.3.3 Productivity — **159**
- 6.4 Future directions – microflora engineering — **160**
- References — **162**

Lorenza Ferro, Fernanda H. B. De Miranda Vasconcelos, Francesco G. Gentili and Christiane Funk

- 7 Photosynthesis at high latitudes – adaptation of photosynthetic microorganisms to Nordic climates — 165**
- 7.1 Introduction — **165**
- 7.1.1 Photosynthetic microorganisms: characters of a billion years-old story — **165**
- 7.1.2 How, what, where? Growing algae in northern environments — **168**
- 7.2 Acclimation strategies of photosynthetic microorganisms living at high latitudes — **169**

7.2.1	Light acclimation —	169
7.2.2	Cold adaptation —	174
7.3	The strange case of <i>Clamydomonas raudensis</i> strain UW0241 —	178
7.4	MicroBioRefine – biomass production and wastewater reclamation in Nordic climate —	179
7.4.1	Why wastewater? —	181
7.4.2	Why flue gases? —	182
7.5	Conclusions and final remarks —	183
	References —	184

Rasheed Adeleke, Maryam Bello-Akinosho, Mphokgo Maila and Natuschka M. Lee

8 Roles of extremophiles in the bioremediation of polycyclic aromatic hydrocarbon contaminated soil environment — 197

8.1	Introduction —	197
8.2	PAHs in soil environment —	198
8.2.1	Direct and indirect impacts of PAH on soil environment —	199
8.2.2	Sources of PAH in soil environments —	200
8.2.3	Toxicity of PAHs creates extreme environment —	201
8.3	Removal of PAHs from the environment —	202
8.3.1	Different approaches for PAH removal from soil —	202
8.3.2	Bioremediation of PAH-polluted sites —	203
8.4	How do extremophiles drive the bioremediation process? —	205
8.4.1	Aerobic and anaerobic degradation processes —	209
8.4.2	Bioremediation technologies —	211
8.5	Future perspectives —	212
8.5.1	Can other plant-associated microorganisms – endophytes, plant growth promoting rhizobacteria (PGPR), mycorrhizal helper bacteria, and mycorrhizal fungi – assist extremophiles in PAH degradation? —	212
8.6	Summary and Conclusions —	216
	References —	216

Guðný Vala Þorsteinsdóttir and Oddur Vilhelmsson

9 Bioremediative potential of bacteria in cold desert environments — 231

9.1	Bioremediation – general considerations —	231
9.2	Hydrocarbon degradation —	232
9.2.1	Aerobic degradation —	233
9.2.2	Anaerobic degradation —	233
9.3	Effects of environmental conditions —	234
9.4	Microbial life in cold deserts —	235
9.4.1	Bioprospecting cold desert soils for hydrocarbon-degrading microbes —	236

- 9.5 Concluding remarks — 238
- References — 238

Helga Stan-Lotter

- 10 Subsurface extremophiles and nuclear waste storage — 243**
 - 10.1 Introduction — 243
 - 10.2 Subsurface storage and research sites — 246
 - 10.2.1 Deep geological facilities — 246
 - 10.2.2 Underground rock laboratories — 247
 - 10.2.3 Rock salt deposits — 248
 - 10.2.4 Advantages of the Waste Isolation Pilot Plant — 249
 - 10.3 Microorganisms and radionuclide storage — 250
 - 10.4 Removal of uranium and other radionuclides — 252
 - 10.4.1 Adsorption to free or immobilized cells — 252
 - 10.4.2 Dissimilatory reduction which decreases solubility — 253
 - 10.4.3 Halophilic microorganisms and radionuclides — 255
 - 10.5 Nuclear transmutation — 256
 - References — 257

Jeannette Marrero, Orquidea Coto and Axel Schippers

- 11 Metal bioleaching: fundamentals and geobiotechnical application of aerobic and anaerobic acidophiles — 261**
 - 11.1 Introduction — 261
 - 11.2 Acidophiles: habitats and adaptation to low pH — 262
 - 11.3 Biomining and bioleaching: concepts and mechanisms — 264
 - 11.3.1 Sulfide and oxide ores — 264
 - 11.3.2 Fundamentals of bioleaching and biooxidation mechanisms — 266
 - 11.4 Geobiotechnical application of acidophiles: biomining examples — 269
 - 11.4.1 Irrigation-type processes — 270
 - 11.4.2 Commercial applications of irrigation-type bioleaching processes: copper sulfide ore bioprocesses — 270
 - 11.4.3 Stirred tank-type processes for sulfide minerals — 271
 - 11.4.4 Bioleaching of oxide ores — 273
 - References — 281

Cyprien Verseux

- 12 Cyanobacterium-based technologies in space and on Earth — 289**
 - 12.1 Introduction — 289
 - 12.2 Cyanobacterium-based life support systems for space exploration — 289
 - 12.3 Transferring cyanobacterium-based life-support systems to Earth — 291

12.4	Contributions of cyanobacterium-based processes to carbon fixation —	293
12.5	Cyanobacteria as a source of energy —	294
12.6	Cyanobacteria for food production —	296
12.7	Cyanobacteria against reverse desertification —	297
12.8	Other biotechnological applications of cyanobacteria —	298
12.9	Engineering cyanobacteria —	299
12.10	Conclusion —	302
	Acknowledgements —	302
	References —	303

Marine Vandewalle-Capo, Eric Capo, Baraa Rehamnia, Merlin Sheldrake and Natuschka M. Lee — **313**

13 The biotechnological potential of yeast under extreme conditions — 313

13.1	Introduction —	313
13.1.1	Overview of the fungal kingdom —	313
13.1.2	Overview of the yeast biology —	314
13.1.3	Cultivation of yeasts —	316
13.1.4	Microbial ecology under extreme conditions —	316
13.1.5	Global diversity of extremophilic yeast —	318
13.2	Yeast diversity in extreme environments —	318
13.2.1	Cold environments —	318
13.2.2	Hot environments —	321
13.2.3	Acidic environments —	322
13.2.4	Alkaline environments —	322
13.2.5	Saline environments —	323
13.2.6	Desiccated environments —	324
13.2.7	Deep-sea environments —	324
13.2.8	Terrestrial dark environments —	325
13.2.9	Environments with radiation —	326
13.2.10	Polluted environments —	326
13.3	Biotechnological applications of extremophilic yeast —	327
13.3.1	Food biotechnology —	327
13.3.2	Environmental biotechnology —	331
13.3.3	Biofuel —	332
13.3.4	Biosynthesis —	334
13.3.5	Agriculture and aquaculture —	335
13.3.6	Biomedical and pharmaceutical applications —	336
13.3.7	Insect biotechnology —	338
13.3.8	Astrobiotechnology —	339
13.4	Summary —	339
	References —	340

Baraa Rehamnia, Renaud de Cherisey, Olivier Braissant, and Natuschka Lee

14	Biotechnological potential of tardigrades — 357
14.1	Historical overview of the discovery of tardigrades and their cryptobiotic abilities — 357
14.2	A brief review of what kind of animals tardigrades are — 358
14.3	The characteristics of tolerance in tardigrades — 362
14.3.1	Anhydrobiosis — 363
14.3.2	Cryobiosis — 364
14.3.3	Osmobiosis — 365
14.3.4	Anoxybiosis — 366
14.4	Biotechnological potential of tardigrades — 366
14.4.1	Preservation molecules and processes in anhydrobiotic organisms — 368
14.4.2	Medical biotechnology — 370
14.4.3	Environmental biotechnology — 373
14.4.4	Tardigrades in space research — 375
14.5	Summary — 377
	References — 378

Index — 391
