

Contents

Jochen Brüning and Matthias Staudacher

Introduction — VII

Holger Reich and Marco Varisco

Algebraic K -theory, assembly maps, controlled algebra, and trace methods — 1

Helga Baum

Lorentzian manifolds with special holonomy – Constructions and global properties — 51

Sebastian Boldt and Dorothee Schueth

Contributions to the spectral geometry of locally homogeneous spaces — 69

Andreas Juhl

On conformally covariant differential operators and spectral theory of the holographic Laplacian — 90

Klaus Altmann and Gavril Farkas

Moduli and deformations — 116

Björn Andreas and Alexander Schmitt

Vector bundles in algebraic geometry and mathematical physics — 150

Dirk Kreimer

Dyson–Schwinger equations: Fix-point equations for quantum fields — 186

Dhritiman Nandan and Gang Yang

Hidden structure in the form factors of $\mathcal{N} = 4$ SYM — 197

Valentina Forini

On regulating the AdS superstring — 221

Pedro Liendo

Constraints on CFT observables from the bootstrap program — 245

Marco Chiodaroli

Simplifying amplitudes in Maxwell-Einstein and Yang-Mills-Einstein supergravities — 266

Livia Ferro, Jan Plefka, and Matthias Staudacher

Yangian symmetry in maximally supersymmetric Yang-Mills theory — 288

Lars Andersson and Christian Bär

Wave and Dirac equations on manifolds — 324

Francesco Bei, Jochen Brüning, Batu Güneysu, and Matthias Ludewig

Geometric analysis on singular spaces — 349

Klaus Ecker, Bernold Fiedler et al.

**Singularities and long-time behavior in nonlinear evolution equations
and general relativity — 417**

Index — 491
