Fractional Dynamics — 1

Carlo Cattani

Local Fractional Calculus on Shannon Wavelet Basis — 6

- 1 Introduction — 6
- 2 Preliminary Remarks — 7
- 2.1 Shannon Wavelets in the Fourier Domain — 9
- 2.2 Properties of the Shannon Wavelet — 11
- 3 Connection Coefficients — 12
- 3.1 Properties of Connection Coefficients — 15
- 4 Differential Properties of $L_2(\mathbb{R})$ -functions in Shannon Wavelet Basis — 16
- 4.1 Taylor Series — 16
- 4.2 Functional Equations — 18
- 4.3 Error of the Approximation by Connection Coefficients — 20
- 5 Fractional Derivatives of the Wavelet Basis — 21
- 5.1 Complex Shannon Wavelets on Fractal Sets of Dimension ν — 22
- 5.2 Local Fractional Derivatives of Complex Functions — 25
- 5.3 Example: Fractional Derivative of a Gaussian on a Fractal Set — 27

Vasily E. Tarasov

Discretely and Continuously Distributed Dynamical Systems with Fractional Nonlocality — 31

- 1 Introduction — 31
- 2 Lattice with Long-range Properties — 32
- 3 Lattice Fractional Nonlinear Equations — 35
- 4 Continuum Fractional Derivatives of the Riesz Type — 38
- 5 From Lattice Equations to Continuum Equations — 40
- 6 Fractional Continuum Nonlinear Equations — 44
- 7 Conclusion — 46

António M. Lopes and J.A. Tenreiro Machado

Temporal Patterns in Earthquake Data-series — 50

- 1 Introduction — 50
- 2 Dataset — 51
- 3 Mathematical Tools — 53
- 3.1 Hierarchical Clustering — 54

3.2	Multidimensional Scaling — 54
4	Data Analysis and Pattern Visualization — 55
4.1	Hierarchical Clustering Analysis and Comparison — 55
4.2	MDS Analysis and Visualization — 57
5	Conclusions — 57

Akira Asada

An Integral Transform arising from Fractional Calculus — 61

1	Integral Transform $\mathcal{R}$ — 61
2	Dirac's δ -function and $\mathcal{R}$ — 64
3	Space of Generalized Functions Spanned by $\delta_a^{(n)}$ — 66
4	Extended Borel Transform — 68
5	The Transform $\mathcal{R}$ and Extended Borel Transform — 71
6	Application of $\mathcal{R}$ to Fractional Differential Equations — 73

Jordan Hristov

Approximate Solutions to Time-fractional Models by Integral-balance Approach — 78

1	Introduction — 78
1.1	Subdiffusion — 79
1.2	Time-Fractional Derivatives in Rheology — 79
1.3	Common Methods of Solutions Involving Time-Fractional Derivatives — 80
2	Preliminaries Necessary Mathematical Background — 81
2.1	Time-Fractional Integral and Derivatives — 81
2.2	Integral-Balance Method — 83
3	Introductory Examples — 86
3.1	Fading Memory in the Diffusion Term — 86
3.2	Example 1: Diffusion of Momentum with Elastic Effects Only — 86
4	Examples Involving Time-fractional Derivatives — 90
4.1	Example 2: Time-Fractional Subdiffusion Equation — 90
4.2	Approximate Parabolic Profiles — 95
4.3	Calibration of the Profile Exponent and Results Thereof — 96
4.4	Example 3: Subdiffusion Equation: A Solution by a Weak Approximate Profile — 98
5	Transient Flows of Viscoelastic Fluids — 99
5.1	Example 4: Stokes' First Problem of a Second Grade Fractional (viscoelastic) Fluid — 99
5.2	Example 5: Transient Flow of a Generalized Second Grade Fluid Due to a Constant Surface Shear Stress — 105
6	Final Comments and Results Outlines — 106

Bashir Ahmad, Ahmed Alsaedi, and Hana Al-Hutami

A Study of Sequential Fractional q -integro-difference Equations with Perturbed Anti-periodic Boundary Conditions — 110

- 1 Introduction — 110
- 2 Preliminaries — 111
- 3 Main Results — 114
- 4 Example — 126

M. K. Lenzi, G. Gonçalves, D. P. Leitões, and E. K. Lenzi

Fractional Diffusion Equation, Sorption and Reaction Processes on a Surface — 129

- 1 Introduction — 129
- 2 Diffusion and Reaction — 130
- 3 Discussion and Conclusions — 138

Jocelyn Sabatier

Fractional Order Models for Electrochemical Devices — 141

- 1 Introduction — 141
- 2 Fractional Modeling of Supercapacitors — 141
- 3 Fractional Modeling of Lead Acid Batteries with Application to State of Charge and State of Health Estimation — 148
- 4 Fractional Modeling of Lithium-ion Batteries with Application to State of Charge — 152
- 5 Conclusion — 154

M. K. Lenzi, G. Gonçalves, F. R. G. B. Silva, R. S. Zola, H. V. Ribeiro, R. Rossato, and E. K. Lenzi

Results for an Electrolytic Cell Containing Two Groups of Ions: PNP - Model and Fractional Approach — 161

- 1 Introduction — 161
- 2 Fractional Diffusion and Impedance — 164
- 3 Conclusions — 169

Abdon Atangana

Application of Fractional Calculus to Epidemiology — 174

- 1 Introduction — 174
- 1.1 Modelling Epidemic of Whooping Cough with Concept of Fractional Order Derivative — 175
- 2 Conclusion — 188

A.H. Bhrawy, T.M. Taha, M.A. Abdelkawy, and R.M. Hafez

On Numerical Methods for Fractional Differential Equation on a Semi-infinite Interval — 191

1	Introduction —	191
2	Preliminaries and Notations —	193
3	Generalized Laguerre Polynomials/Functions —	194
3.1	Generalized Laguerre Polynomials —	194
3.2	Fractional-order Generalized Laguerre Functions —	195
3.3	Fractional-order Generalized Laguerre-Gauss-type Quadratures —	196
4	Operational Matrices of Caputo Fractional Derivatives —	197
4.1	GLOM of Fractional Derivatives —	197
4.2	FGLOM of Fractional Derivatives —	198
5	Operational Matrices of Riemann-Liouville Fractional Integrals —	200
5.1	GLOM of Fractional Integration —	200
5.2	FGLOM of Fractional Integration —	201
6	Spectral Methods for FDEs —	202
6.1	Generalized Laguerre Tau Operational Matrix Formulation Method —	202
6.2	FGLFs Tau Operational Matrix Formulation Method —	203
6.3	Tau Method Based on FGLOM of Fractional Integration —	204
6.4	Collocation Method for Nonlinear FDEs —	206
6.5	Collocation Method for System of FDEs —	207
7	Applications and Numerical Results —	208

Hong-Yan Liu and Ji-Huan He

From Leibniz's Notation for Derivative to the Fractal Derivative, Fractional Derivative and Application in Mongolian Yurt — 219

1	Introduction —	219
2	Fractal Derivative —	220
3	On Definitions of Fractional Derivatives —	222
3.1	Variational Iteration Method —	222
3.2	Definitions on Fractional Derivatives —	223
4	Mongolian Yurt, Biomimic Design of Cocoon and its Evolution —	224
4.1	Pupa-cocoon System —	225
4.2	Fractal Hierarchy and Local Fractional Model —	226
5	Conclusions —	228

Mohamad Rafi Segi Rahmat, Dumitru Baleanu, and Xiao-Jun Yang

Cantor-type spherical-coordinate Method for Differential Equations within Local Fractional Derivatives — 231

1	Introduction —	231
2	Mathematical Tools —	232
3	Cantor-type Spherical-coordinate Method —	233
4	Examples —	239
5	Conclusions —	240

H. M. Srivastava, J. A. Tenreiro Machado, and Xiao-Jun Yang

Approximate Methods for Local Fractional Differential Equations — 243

- 1 Introduction — **243**
- 2 The Theory of Local Fractional Calculus — **244**
- 3 Analysis of the Methods — **245**
- 3.1 The local fractional variational iteration method — **245**
- 3.2 The local fractional Adomian decomposition method — **246**
- 3.3 The local fractional series expansion method — **247**
- 4 Applications to Solve Partial Differential Equations Involving Local Fractional Derivatives — **248**
- 4.1 Solving the linear Boussinesq equation occurring in fractal long water waves with local fractional variational iteration method — **249**
- 4.2 Solving the equation of the fractal motion of a long string by the local fractional Adomian decomposition method — **250**
- 4.3 Solving partial differential equations arising from the fractal transverse vibration of a beam with local fractional series expansion method — **252**
- 5 Conclusions — **254**

Xiao-Jun Yang, Dumitru Baleanu, and J. A. Tenreiro Machado

Numerical Solutions for ODEs with Local Fractional Derivative — 258

- 1 Introduction — **258**
- 2 The Generalized Local Fractional Taylor Theorems — **259**
- 3 Extended DTM — **260**
- 4 Four Illustrative Examples — **264**
- 5 Conclusions — **269**

Xiao-Jun Yang, Carlo Cattani, and Gongnan Xie

Local Fractional Calculus Application to Differential Equations Arising in Fractal Heat Transfer — 272

- 1 Introduction — **272**
- 2 Theory of Local Fractional Vector Calculus — **273**
- 3 The Local Fractional Heat Equations Arising in Fractal Heat Transfer — **275**
- 3.1 The Non-homogeneous Heat Problems Arising in Fractal Heat Flow — **276**
- 3.2 The Homogeneous Heat Problems Arising in Fractal Heat Flow — **278**
- 4 Local Fractional Poisson Problems Arising in Fractal Heat Flow — **280**
- 5 Local Fractional Laplace Problems Arising From Fractal Heat Flow — **281**
- 6 The 2D Partial Differential Equations of Fractal Heat Transfer in Cantor-type Circle Coordinate Systems — **282**

Hossein Jafari, Hassan Kamil Jassim, and Syed Tauseef Mohyud-Din
Local Fractional Laplace Decomposition Method for Solving Linear Partial Differential Equations with Local Fractional Derivative — 286

- 1 Introduction — 286
- 2 Mathematical Fundamentals — 287
- 3 Local Fractional Laplace Decomposition Method — 288
- 4 Illustrative Examples — 290
- 5 Conclusions — 304

Alireza K. Golmankhaneh and D. Baleanu

Calculus on Fractals — 307

- 1 Introduction — 307
- 2 Calculus on Fractal Subset of Real-Line — 308
 - 2.1 Staircase Functions — 308
 - 2.2 F -Limit and F -Continuity — 309
 - 2.3 F^α -Integration — 309
 - 2.4 F^α -Differentiation — 311
 - 2.5 First Fundamental Theorem of F^α -calculus — 311
 - 2.6 Second Fundamental Theorem of F^α -calculus — 312
 - 2.7 Taylor Series on Fractal Sets — 312
 - 2.8 Integration by Parts in F^α -calculus — 312
- 3 Fractal F^α -differential Equation — 312
- 4 Calculus on Fractal Curves — 314
 - 4.1 Staircase Function on Fractal Curves — 314
 - 4.2 F -Limit and F -Continuity on Fractal Curves — 315
 - 4.3 F^α -integration on Fractal Curves — 315
 - 4.4 F^α -Differentiation on Fractal Curves — 316
 - 4.5 First Fundamental Theorem on Fractal Curve — 316
 - 4.6 Second Fundamental Theorem on Fractal Curve — 316
- 5 Gradient, Divergent, Curl and Laplacian on Fractal Curves — 316
 - 5.1 Gradient on Fractal Curves — 316
 - 5.2 Divergent on Fractal Curves — 317
 - 5.3 Laplacian on Fractal Curves — 317
- 6 Function Spaces in F^α -calculus — 317
 - 6.1 Spaces of F^α -differentiable Functions — 317
 - 6.2 Spaces of F^α -Integrable Functions — 318
- 7 Calculus on Fractal Subsets of R^3 — 318
 - 7.1 Integral Staircase for Fractal Subsets of R^3 — 318
 - 7.2 F^α -integration on Fractal Subset of R^3 — 319
 - 7.3 F^α -differentiation on Fractal Subsets of R^3 — 320

8	F^α -differential Form — 320
8.1	F^α -Fractional 1-forms — 321
8.2	F^α - Fractional Exactness — 321
8.3	F^α -Fractional 2-forms — 321
9	Gauge Integral and F^α -calculus — 321
10	Application of F^α -calculus — 322
10.1	Lagrangian and Hamiltonian Mechanics on Fractals — 323
11	Quantum Mechanics on Fractal Curve — 324
11.1	Generalized Feynman Path Integral Method — 324
12	Continuity Equation and Probability on Fractal — 326
13	Newtonian Mechanics on Fractals — 327
13.1	Kinematics of Motion — 327
13.2	Dynamics of Motion — 328
14	Work and Energy Theorem on Fractals — 329
15	Langevin F^α -Equation on Fractals — 330
16	Maxwell's Equation on Fractals — 330

Haci Mehmet Baskonus, Fethi Bin Muhammad Belgacem, and Hasan Bulut
**Solutions of Nonlinear Fractional Differential Equations Systems through an
Implementation of the Variational Iteration Method — 333**

1	Introduction — 333
2	The Variational Iteration Method — 334
3	VIM Application to NFDES — 335
3.1	Example 1 — 335
3.2	Example 2 — 338
4	Conclusions and Future Work — 341

Toufik Mekkaoui, Zakia Hammouch, Fethi B.M.Belgacem, and Ahmed El Abbassi
**Fractional-order Nonlinear Systems: Chaotic Dynamics, Numerical Simulation and
Circuits Design — 343**

1	Introduction — 343
2	Preliminaries — 344
2.1	Basic definitions for Fractional Calculus — 344
2.2	Stability Criterion — 345
3	Circuits Implementation and Numerical Simulations — 346
3.1	Adams-Bashforth (PECE) Algorithm — 346
3.2	The Fractional Frequency Domain Approximation — 347
3.3	A New Fractional-Order Chaotic System — 348
3.4	A Fractional-order Chaotic System without Equilibrium Points — 349
3.5	Numerical Simulations — 349
3.6	Circuit Designs — 350
4	Concluding Remarks — 351

E. Guariglia

Fractional Derivative of the Riemann Zeta Function — 357

- 1 Introduction — **357**
- 2 Preliminary Remarks on Riemann Zeta Function — **358**
- 3 Derivative in the Ortigueira Sense and Caputo Derivative in Complex Plane — **359**
- 4 Fractional Derivative of $\zeta(s)$ — **361**
- 5 Convergence of $\Re(\psi(\alpha, s))$ and $\Im(\psi(\alpha, s))$ — **363**

Fethi Bin Muhammad Belgacem, Vartika Gulati, Pranay Goswami, and Abdullah Aljoujee

A Treatment of Generalized Fractional Differential Equations: Sumudu Transform Series Expansion Solutions, and Applications — 369

- 1 Introduction — **369**
- 2 Preamble — **370**
- 3 Main Results — **374**
- 4 Conclusion — **377**
