Preface — VII

1 Introduction — 1

- 1.1 Bases and semi-groups — 1
- 1.2 Discrete operator and denseness of the generalized eigenvectors — 2
- 1.3 v -convergence operators — 3
- 1.4 Γ -hypercyclic set of linear operators — 4
- 1.5 Analytic operators in Béla Szökefalvi-Nagy's sense — 5
- 1.6 Bases of the perturbed operator $T(\varepsilon)$ — 6
- 1.7 Frames in Hilbert spaces — 7
- 1.8 Applications — 10
 - 1.8.1 Perturbation method for sound radiation by a vibrating plate in a light fluid — 10
 - 1.8.2 The shape memory alloys operator — 12
 - 1.8.3 Heat exchanger equation with boundary feedback — 12
 - 1.8.4 Expansion of solution for a hyperbolic system — 13
 - 1.8.5 Frame of a one-dimensional wave control system — 14
 - 1.8.6 Reggeon field theory — 15
- 1.9 Outline of contents — 15

2 Linear operators — 19

- 2.1 Closed and closable operators — 19
- 2.2 Basis — 20
- 2.3 Fredholm operators — 22
 - 2.3.1 Bounded operators — 22
 - 2.3.2 Unbounded operators — 24
- 2.4 Fredholm perturbations — 25
- 2.5 Compact, A -bounded, and A -compact operators — 25
- 2.6 Weakly compact operators — 26
- 2.7 Strictly singular operators — 26
- 2.8 Closable operator perturbation — 26
- 2.9 Adjoint operator — 27
- 2.10 Resolvent set and spectrum — 28
- 2.11 Generalized eigenvectors — 31
- 2.12 Operators on Hilbert spaces — 32
- 2.13 Discrete operator — 33
- 2.14 Ascent and descent operator — 34

2.15	Riesz operators —	35
2.16	Norm of the resolvent —	36
2.17	Convergence operators —	37
2.17.1	Convergence sequence —	37
2.17.2	Limit inferior and superior —	39
2.17.3	v -convergence —	40
2.17.4	v -continuity —	41
2.18	Normal, hyponormal, and pseudo-inverse operator —	43
2.18.1	Normal and hyponormal operator —	43
2.18.2	Pseudo-inverse operator —	43
2.19	Dunford–Pettis property —	44
2.20	Jeribi, Wolf, and Weyl essential spectra —	44
2.21	Hypercyclic operators —	47
2.22	Closed subspace —	48

3 Basic notations and results — 55

3.1	Bessel sequences in Hilbert spaces —	55
3.2	Orthogonal sequences in Hilbert spaces —	58
3.3	Projection —	62
3.3.1	Generalities —	62
3.3.2	Spectral projection —	63
3.3.3	Infinite sum of projections —	65
3.3.4	Commutation of projections —	66
3.4	p -subordinate operator —	68
3.5	Finite-order and sine-type functions —	70
3.5.1	Finite-order function —	70
3.5.2	A function of the sine type —	71
3.6	Singular values —	74
3.6.1	Singular values of a compact operator —	74
3.6.2	Numerical range —	75
3.6.3	Carleman class C_p —	76
3.7	Fractional operators —	77
3.8	Phragmén–Lindelöf theorems —	78
3.9	Fredholm determinant —	79
3.10	Denseness of generalized eigenvectors —	80
3.11	Inequalities —	81

4 Bases — 85

4.1	Hamel bases —	85
4.2	Schauder basis —	85
4.3	Coefficient functionals —	86
4.4	Natural projections associated with a basis —	86

4.5	A characterization of bases —	94
4.6	Biorthogonal systems —	99
4.7	Orthonormal bases —	99
4.8	The Gram matrix —	104
4.9	Hilbert–Schmidt operator —	105
4.10	The trace class —	105
4.11	Equivalent bases —	106
4.12	Riesz basis —	110
4.12.1	Definition —	110
4.12.2	Completeness results —	111
4.12.3	Dual basis associated to a Riesz basis —	113
4.12.4	Characterization of Riesz basis —	114
4.12.5	Collection of vectors near a Riesz basis —	118
4.12.6	Sequence quadratically close —	119
4.12.7	Sum direct of subspaces —	121
4.12.8	Concept of the angle between two closed linear subspaces —	123
4.12.9	Paley–Wiener criterion —	125
4.12.10	Pavlov result —	127
4.13	Basis of subspaces —	127
4.14	Unconditional bases —	128
4.15	Riesz basis of finite-dimensional A -invariant subspaces —	130
5	Semi-groups —	133
5.1	C_0 -semi-group —	133
5.1.1	Definitions —	133
5.1.2	Hille–Yosida theorem —	133
5.1.3	Dissipative operator —	134
5.1.4	Eigenvalues —	134
5.2	Diagonalization of semi-groups —	135
5.2.1	Diagonalization of the semi-group e^{-tA} —	135
5.2.2	Diagonalization of the semi-group $e^{-tA^{\frac{1}{2}}}$ —	137
5.2.3	Riesz basis formed by eigenvectors of A —	140
6	Discrete operator and denseness of the generalized eigenvectors —	145
6.1	Hilbert–Schmidt discrete operator —	145
6.1.1	Elementary properties —	145
6.1.2	Direct sum —	147
6.1.3	Laurent expansion for the resolvent —	148
6.1.4	Spectral theory of the inverse of an HS discrete operator —	149
6.1.5	Singular values of the resolvent —	152

6.2	Denseness of the generalized eigenvectors of an HS discrete operator — 153
6.2.1	The subspaces M_∞ and S_∞ for a Fredholm operator — 153
6.2.2	Sufficient conditions $\overline{S_\infty} = X$ and $M_\infty = \{0\}$ — 154
7	Frames in Hilbert spaces — 159
7.1	Frame in Hilbert space — 159
7.1.1	Frame — 159
7.1.2	Frames and operators — 163
7.1.3	The projection method — 167
7.1.4	Frame perturbations — 170
7.2	Frame of subspace or fusion frame — 171
7.2.1	Definitions — 172
7.2.2	A characterization of frame of subspaces — 172
7.2.3	Synthesis operator — 174
7.2.4	A characterization of Bessel fusion sequences — 175
7.2.5	A characterization of fusion frames — 177
7.2.6	Oblique projections and biorthogonality — 178
7.2.7	A characterization in terms of orthonormal fusion bases — 182
7.2.8	Duals of fusion frames — 183
7.2.9	Fusion frames and operators — 185
7.2.10	Non-orthogonal fusion frame — 188
8	Summability of series — 191
8.1	Series in principal vectors — 191
8.2	Jordan chain — 191
8.3	Summation of series by Abel's method — 192
8.4	Coefficients of a series in principal vectors — 193
9	v-convergence operators — 201
9.1	v -convergence and spectral properties — 201
9.1.1	Semi-Fredholm sequence — 201
9.1.2	Convergence of the spectrum — 204
9.1.3	v -convergence — 206
9.2	Jeribi, Wolf, and Weyl essential spectra — 208
9.3	Jeribi, Wolf, and Weyl essential spectra of a sequence of linear operators — 214
9.4	v -continuity of Wolf and Weyl essential spectra — 220
9.5	2×2 operator matrix — 224
10	Γ-hypercyclic set of linear operators — 231
10.1	Γ -hypercyclic set of a bounded linear operator — 231

10.1.1	Properties of $\Gamma_{\text{hyp}}(T)$ —	231
10.1.2	Essentially quasi-nilpotent operators —	232
10.1.3	Operators with small $\Gamma_{\text{hyp}}(T)$ —	235
10.1.4	Operators with big $\Gamma_{\text{hyp}}(T)$ —	236
10.1.5	Aluthge transforms —	237
10.1.6	Operator equations $ABA = A^2$ and $BAB = B^2$ —	238
10.1.7	Upper triangular matrices —	239
11	Analytic operators in Béla Szökefalvi-Nagy's sense —	241
11.1	Invariance of the closure —	241
11.1.1	Hypotheses —	241
11.1.2	Closeness —	241
11.2	Eigenvalues and eigenvectors —	242
11.2.1	Entire series of ε —	243
12	Bases of the perturbed operator $T(\varepsilon)$ —	257
12.1	Completeness and Riesz basis of generalized eigenvectors —	257
12.2	On a Schauder basis in a separable Banach space —	257
12.3	Riesz basis property of families of non-harmonic exponentials —	259
12.3.1	The value of ε is variable —	259
12.3.2	The value of ε is fixed —	263
12.3.3	Values of ε are both fixed and variable —	267
12.4	Unconditional basis with parentheses —	271
13	Frame of the perturbed operator $T(\varepsilon)$ —	275
13.1	Frames of eigenvectors of the perturbed operator $T(\varepsilon)$ —	275
13.1.1	Frames of analytic eigenvectors in the sense of Kato —	275
13.1.2	Combination of eigenvectors —	277
13.1.3	Existence of a fixed complex number ε —	279
13.2	Non-orthogonal fusion frames —	280
13.2.1	Analytic projection —	280
13.2.2	Combination of projections —	285
13.2.3	Existence of a fixed complex number ε —	287
14	Perturbation method for sound radiation by a vibrating plate in a light fluid —	289
14.1	Problem of radiation of a vibrating structure in a light fluid —	289
14.2	Compactness results —	291
14.3	Spectral properties of the operator T_0 —	293
14.4	On a Riesz basis in $L^2(\cdot - a, a[\cdot])$ —	297
14.5	Closeness operators —	297
14.6	Denseness and Riesz basis of eigenvectors —	299

14.7	Unconditional basis with parentheses —	299
14.8	Riesz basis property of families of non-harmonic exponentials —	300
14.9	Frames —	301
15	Applications to mathematical models —	305
15.1	Heat exchanger equation with a boundary feedback —	305
15.1.1	The semi-group generated by the operator A —	306
15.1.2	Eigenvalues of the operator A —	307
15.1.3	The stability of the semi-group generated by the operator A —	311
15.1.4	Auxiliary operator —	315
15.1.5	Completeness system —	317
15.1.6	Asymptotic behavior of the eigenvalues of the operator A —	319
15.2	The shape memory alloys operator —	321
15.2.1	Elementary results —	321
15.2.2	Denseness of the generalized eigenvectors —	327
15.2.3	Diagonalization of the semi-groups e^{-tC} and $e^{-tC^{\frac{1}{2}}}$ —	327
15.3	Expansion of solution for a hyperbolic system —	330
15.3.1	The resolvent expression of $\mathcal{A}$ —	331
15.3.2	Spectrum of $\mathcal{A}$ —	334
15.3.3	Spectral radius and essential spectral radius —	338
15.3.4	Riesz basis —	341
15.4	Frame of a one-dimensional wave control system —	345
15.4.1	One-dimensional string equation —	345
15.4.2	Adjoint of A —	347
15.4.3	Spectrum of A —	348
15.4.4	Non-orthogonal fusion frame —	352
16	Reggeon field theory —	359
16.1	Gribov operator in Bargmann space —	359
16.1.1	General results —	360
16.1.2	Auxiliary results —	362
16.1.3	Spectral properties of $H_{\lambda'}$ —	365
16.1.4	Cauchy problem —	368
16.1.5	Denseness of the generalized eigenvectors of the operator $H_{\lambda'}$ for $\lambda' \neq 0$ —	370
16.2	The case of null transverse dimension ($n = 1$) —	372
16.2.1	Annihilation and creation operators —	373
16.2.2	Subordinate and boundedness —	374
16.2.3	Unconditional basis in Bargmann space —	382
16.2.4	Generalized diagonalization of the semi-groups $e^{-tH_{\lambda'',\lambda',\mu,\lambda}}$ and $e^{-tH_{\lambda'',\lambda',\mu,\lambda}^{\frac{1}{2}}}$ —	384

16.2.5	Riesz basis of finite-dimensional $H_{\lambda'',\lambda',\mu,\lambda}$ -invariant subspaces —	386
16.3	Schauder basis of Gribov operator in the Bargmann space —	387

Bibliography — 393

Index — 403
