## Preface — vii

### 1 Preliminaries — 1

- 1.1 Notations and basic definitions — 1
- 1.2 Metric spaces — 2
- 1.3 Normed linear spaces — 7
- 1.4 Polynomials — 12
- 1.5 Zeros and fixed points of functions — 20
- 1.6 Mean value theorems — 28
- 1.7 Normal forms of matrices — 29
- 1.8 Eigenvalues — 36
- 1.9 Nonnegative matrices — 56
- 1.10 Particular matrices — 65

### 2 Real intervals — 75

- 2.1 Intervals, partial ordering — 75
- 2.2 Interval arithmetic — 77
- 2.3 Algebraic properties,  $\chi$ -function — 80
- 2.4 Auxiliary functions — 88
- 2.5 Distance and topology — 93
- 2.6 Elementary interval functions — 97
- 2.7 Machine interval arithmetic — 99

### 3 Interval vectors, interval matrices — 109

- 3.1 Basics — 109
- 3.2 Powers of interval matrices — 114
- 3.3 Particular interval matrices — 121

### 4 Expressions, $P$ -contraction, $\varepsilon$ -inflation — 125

- 4.1 Expressions, range — 125
- 4.2  $P$ -contraction — 139
- 4.3  $\varepsilon$ -inflation — 150

### 5 Linear systems of equations — 159

- 5.1 Motivation — 159
- 5.2 Solution sets — 160
- 5.3 Interval hull — 177
- 5.4 Direct methods — 191
- 5.5 Iterative methods — 239

|                            |                                             |
|----------------------------|---------------------------------------------|
| <b>6</b>                   | <b>Nonlinear systems of equations — 289</b> |
| 6.1                        | Newton method – one-dimensional case — 289  |
| 6.2                        | Newton method – multidimensional case — 297 |
| 6.3                        | Krawczyk method — 303                       |
| 6.4                        | Hansen–Sengupta method — 320                |
| 6.5                        | Further existence tests — 325               |
| 6.6                        | Bisection method — 342                      |
| <b>7</b>                   | <b>Eigenvalue problems — 345</b>            |
| 7.1                        | Quadratic systems — 346                     |
| 7.2                        | A Krawczyk-like method — 349                |
| 7.3                        | Lohner method — 363                         |
| 7.4                        | Double or nearly double eigenvalues — 371   |
| 7.5                        | The generalized eigenvalue problem — 379    |
| 7.6                        | A method due to Behnke — 382                |
| 7.7                        | Verification of singular values — 393       |
| 7.8                        | An inverse eigenvalue problem — 398         |
| <b>8</b>                   | <b>Automatic differentiation — 407</b>      |
| 8.1                        | Forward mode — 407                          |
| 8.2                        | Backward mode — 413                         |
| <b>9</b>                   | <b>Complex intervals — 417</b>              |
| 9.1                        | Rectangular complex intervals — 418         |
| 9.2                        | Circular complex intervals — 423            |
| 9.3                        | Applications of complex intervals — 429     |
| <b>Final Remarks — 433</b> |                                             |

## Appendix

|          |                                            |
|----------|--------------------------------------------|
| <b>A</b> | <b>Jordan normal form — 437</b>            |
| <b>B</b> | <b>Brouwer’s fixed point theorem — 439</b> |
| <b>C</b> | <b>Theorem of Newton–Kantorovich — 445</b> |
| <b>D</b> | <b>The row cyclic Jacobi method — 451</b>  |
| <b>E</b> | <b>The CORDIC Algorithm — 457</b>          |

**F      The symmetric solution set — 463**

**G      INTLAB — 469**

**Bibliography — 483**

**Symbol Index — 499**

**Author Index — 505**

**Subject Index — 509**
