Luigi Ambrosio and Shouhei Honda

New stability results for sequences of metric measure spaces with uniform Ricci bounds from below — 1

- 1.1 Introduction — 1
- 1.2 Notation and basic setting — 5
- 1.3 Convergence of functions — 6
- 1.4 Minimal relaxed slopes, Cheeger energy and $RCD(K, \infty)$ spaces — 10
- 1.5 Local convergence of gradients under Mosco convergence — 16
- 1.6 BV functions and their stability — 22
- 1.7 Compactness in $H^{1,p}$ and in BV — 25
- 1.8 Mosco convergence of p -Cheeger energies — 28
- 1.9 p -spectral gap — 30
- 1.10 Stability of Hessians and Ricci tensor — 37
- 1.11 Dimensional stability results — 45

Vladimir I. Bogachev

Surface measures in infinite-dimensional spaces — 52

- 2.1 Introduction — 52
- 2.2 Notation and terminology — 55
- 2.3 Surface measures in the Gaussian case — 57
- 2.4 Surface measures for differentiable measures — 69
- 2.5 Fine versions of surface measures controlled by capacities — 79
- 2.6 Examples and comments — 83
- 2.7 Surface measures of higher codimension — 87

Fabio Cavalletti

An Overview of L^1 optimal transportation on metric measure spaces — 98

- 3.1 Introduction — 98
 - 3.1.1 Monge problem — 98
 - 3.1.2 Lévy-Gromov isoperimetric inequality — 102
 - 3.1.3 Outline — 104
- 3.2 Preliminaries — 105
 - 3.2.1 Geometry of metric measure spaces — 106
 - 3.2.2 Isoperimetric profile function — 108
 - 3.2.3 Disintegration of measures — 109
- 3.3 Transport set — 111
 - 3.3.1 Branching structures in the Transport set — 113
- 3.4 Cyclically monotone sets — 115

3.4.1	Structure of the quotient set —	120
3.4.2	Balanced transportation —	123
3.5	Regularity of conditional measures —	125
3.5.1	Atomless conditional probabilities —	126
3.5.2	Absolute continuity —	127
3.5.3	Weak Ricci curvature bounds: $\text{MCP}(K, N)$ —	129
3.5.4	Weak Ricci curvature bounds: $\text{CD}(K, N)$ —	133
3.6	Applications —	137
3.6.1	Solution of the Monge problem —	137
3.6.2	Isoperimetric inequality —	140

Guido De Philippis, Andrea Marchese, and Filip Rindler

On a conjecture of Cheeger — 145

4.1	Introduction —	145
4.2	Setup —	146
4.2.1	Lipschitz differentiability spaces —	146
4.2.2	Alberti representations —	147
4.2.3	One-dimensional currents —	148
4.3	Proof of Cheeger's conjecture —	152

Tom Leinster and Mark W. Meckes

The magnitude of a metric space: from category theory to geometric measure theory — 156

5.1	Introduction —	156
5.2	Finite metric spaces —	158
5.2.1	The magnitude of a matrix —	158
5.2.2	The Euler characteristic of a finite category —	159
5.2.3	Enriched categories —	160
5.2.4	The magnitude of a finite metric space —	162
5.2.5	Positive definite metric spaces —	164
5.3	Compact metric spaces —	165
5.3.1	Compact positive definite spaces —	166
5.3.2	Weight measures —	169
5.3.3	Maximum diversity —	172
5.4	Magnitude in normed spaces —	174
5.4.1	Magnitude in $\mathbb{R}$ —	175
5.4.2	Magnitude in the ℓ_1 -norm —	176
5.4.3	The Fourier-analytic perspective —	181
5.4.4	Magnitude in Euclidean space —	185
5.5	Open problems —	190

Christian Léonard

On the convexity of the entropy along entropic interpolations — 194

- 6.1 Entropic interpolation — 197
- 6.2 Second derivative of the entropy — 206
- 6.3 Brownian diffusion process — 210
- 6.4 Random walk on a graph — 216
- 6.5 Convergence to equilibrium — 224
- 6.6 Some open questions about curvature and entropic interpolations — 231

Nageswari Shanmugalingam

Brief survey on ∞ -Poincaré inequality and existence of ∞ -harmonic functions — 243

- 7.1 Introduction — 243
- 7.2 Background — 244
- 7.3 Characterizations of ∞ -Poincaré inequality — 248
- 7.4 Existence of ∞ -harmonic extensions of Lipschitz functions — 252
- 7.5 Examples — 255

Takashi Shioya

Metric measure limits of spheres and complex projective spaces — 261

- 8.1 Introduction — 261
- 8.2 Preliminaries — 264
 - 8.2.1 mm-Isomorphism and Lipschitz order — 264
 - 8.2.2 Observable diameter — 265
 - 8.2.3 Separation distance — 265
 - 8.2.4 Box distance and observable distance — 266
 - 8.2.5 Quotient space — 268
 - 8.2.6 Pyramid — 268
- 8.3 Metric on the space of pyramids — 270
- 8.4 Gaussian space and Hopf quotient — 274
- 8.5 Estimate of observable diameter — 275
- 8.6 Limits of spheres and complex projective spaces — 281
- 8.7 d_{conc} -Cauchy property and box convergence — 285

Christina Sormani

Scalar Curvature and Intrinsic Flat Convergence — 288

- 9.1 Introduction — 288
- 9.2 Examples with Positive Scalar Curvature — 293
 - 9.2.1 Examples with Wells — 294
 - 9.2.2 Tunnels and Bubbling — 295
 - 9.2.3 Cancellation and Doubling — 296

9.2.4	Sewing Manifolds — 297
9.3	Integral Currents on a Metric Space — 297
9.3.1	Federer-Fleming currents on Euclidean Space — 298
9.3.2	Ambrosio-Kirchheim Integer Rectifiable Currents — 298
9.3.3	Ambrosio-Kirchheim Integral Currents — 301
9.3.4	Convergence of Currents in a Metric Space — 302
9.3.5	The Flat distance vs the Hausdorff distance — 304
9.4	Integral Current Spaces and Intrinsic Flat Convergence — 306
9.4.1	Integral Current Spaces — 307
9.4.2	Intrinsic Flat Convergence — 310
9.4.3	Compactness Theorems for Intrinsic Flat Convergence — 312
9.5	Theorems which imply Intrinsic Flat Convergence — 315
9.5.1	Using Riemannian Embeddings to estimate $d_{\mathcal{F}}$ — 315
9.5.2	Smooth Convergence Away from Singular Sets — 316
9.5.3	Pairs of Integral Current Spaces — 318
9.6	Theorems about Intrinsic Flat Limits — 319
9.6.1	Limits of Points and Points with no Limits — 319
9.6.2	Limits of Functions — 322
9.6.3	Intrinsic Flat with Volume Convergence — 324
9.7	Results and Conjectures about Limits of Manifolds with Nonnegative Scalar Curvature — 325
9.7.1	Almost Rigidity of the Positive Mass Theorem and the Bartnik Conjecture — 326
9.7.2	The Bartnik Conjecture — 329
9.7.3	Almost Rigidity of the Scalar Torus Theorem — 330
9.7.4	Almost Rigidity Theorems and Ricci Flow — 331
9.7.5	Gromov's Prisms and Generalized Nonnegative Scalar Curvature — 332
9.7.6	Almost Rigidity of the Positive Mass Theorem and Regularity of $\mathcal{F}$ Limits — 334
