Preface — V

Acknowledgment — IX

Preface for the Original Text — XI

Part I: Fundamentals

- 1 Calculus of variations — 3**
 - 1.1 Reaction–diffusion systems — 3
 - 1.1.1 Keller–Segel model — 3
 - 1.1.2 Stationary problems — 5
 - 1.1.3 Existence and nonexistence of a solution — 6
 - 1.2 Pohozaev identity — 6
 - 1.2.1 Basic identity — 6
 - 1.2.2 Generalized identity — 9
 - 1.2.3 Free boundaries and unique continuation — 14
 - 1.3 Method of variations — 18
 - 1.3.1 Lagrangian multiplier — 18
 - 1.3.2 Sobolev and Morrey embeddings — 20
 - 1.3.3 Differentiability and submersion — 27
 - 1.3.4 Positivity and regularity — 32
 - 1.4 Critical exponent — 33
 - 1.4.1 Sobolev constant — 33
 - 1.4.2 Lieb’s lemma — 36
 - 1.4.3 Brezis–Kato’s theorem — 38
 - 1.5 Mountain pass lemma — 40
 - 1.5.1 Palais–Smale condition — 40
 - 1.5.2 Deformation lemma — 43
 - 1.5.3 Ekeland’s variational principle — 44
 - 1.5.4 Legendre transformation — 46
 - 1.5.5 Minimax principle — 49
 - 1.5.6 Ghoussoub–Preiss version — 53
- 2 Maximum principles — 59**
 - 2.1 Parabolic dynamics — 59
 - 2.1.1 Ignition model — 59
 - 2.1.2 Stationary state: standard arguments — 62
 - 2.1.3 Global-in-time dynamics — 66

2.1.4	Branch of minimal solutions —	71
2.1.5	Unboundedness via the topological degree —	76
2.1.6	Nonminimal solutions —	78
2.2	Radial symmetry —	79
2.2.1	Gidas–Ni–Nirenberg’s theorem —	79
2.2.2	Maximum principles —	84
2.2.3	Method of the moving plane —	88
2.2.4	Some remarks —	91
2.2.5	Serrin’s corner point lemma —	94
2.3	Convexity of level sets —	95
2.3.1	Nonparametric convex surfaces —	95
2.3.2	Logarithmic concavity of the solution —	98
2.3.3	Identity for the Hessian —	100
2.4	Symmetric criticality —	103
2.4.1	Symmetric functionals —	103
2.4.2	Symmetric solutions —	105
2.4.3	Maximal symmetry —	105
2.4.4	Mountain pass approach —	108
3	Complex structure —	109
3.1	Theory of surfaces —	109
3.1.1	Curvatures —	109
3.1.2	Conformal geometry and soap bubbles —	112
3.1.3	Liouville integral and spherical derivatives —	115
3.1.4	Sinh–Poisson equation, quaternion, harmonic map —	118
3.2	Boltzmann–Poisson equation —	121
3.2.1	Asymptotic analysis —	121
3.2.2	Bol’s inequality —	123
3.2.3	Radial solutions —	124
3.2.4	Associated Legendre equations —	126
3.2.5	Laplace–Beltrami operator —	126
3.2.6	Potential theory —	127
3.2.7	Neumann problems —	128
3.3	Classification of the singular limit —	129
3.3.1	Summary —	129
3.3.2	Boundary estimate —	131
3.3.3	Obata’s relation —	134
3.3.4	Complex analysis —	137
3.3.5	Isolated singular points —	141
3.3.6	Simply-connected domains —	143
3.3.7	Convex domains —	145
3.4	Singular perturbation —	150

- 3.4.1 Weston's theory — 150
- 3.4.2 Moseley–Wente's theory — 157
- 3.4.3 Convergence of the asymptotic expansion — 159
- 3.4.4 Area functional — 165

4 Rearrangement — 171

- 4.1 Elliptic eigenvalue problems — 171
 - 4.1.1 Vibrating membrane — 171
 - 4.1.2 Hartman–Wintner's theorem — 175
 - 4.1.3 Kuo's lemma — 178
 - 4.1.4 Nodal domains — 181
 - 4.1.5 Faber–Krahn inequality — 183
- 4.2 Equimeasurable transformations — 186
 - 4.2.1 Coarea formula — 186
 - 4.2.2 Talenti's comparison theorem — 188
 - 4.2.3 Capacity estimates of the singular set — 191
 - 4.2.4 Parabolic case — 194
- 4.3 Isoperimetric inequality on surfaces — 198
 - 4.3.1 Bol's inequality in analytic form — 198
 - 4.3.2 Mean value theorems — 200
 - 4.3.3 Reverse inequality — 205
 - 4.3.4 Bandle's rearrangement — 212
 - 4.3.5 Global analysis — 216
 - 4.3.6 A priori estimates and bending — 217
 - 4.3.7 Connectivity via isoperimetric inequality — 219
 - 4.3.8 Trudinger–Moser inequality — 226
- 4.4 Normalized Ricci flow — 230
 - 4.4.1 Geometric motivation — 230
 - 4.4.2 Analytic approach — 233
 - 4.4.3 Benilan's inequality — 236
 - 4.4.4 Estimate from below — 238
 - 4.4.5 Concentration of probability measures — 243
 - 4.4.6 Compactness of the orbit — 247

Part II: Applications

5 Supplementary topics — 255

- 5.1 Nehari principle — 255
 - 5.1.1 An alternative variation — 255
 - 5.1.2 Equivalence to the mountain pass lemma — 257
 - 5.1.3 Minimizing sequences — 259

5.1.4	Iterative sequences —	261
5.2	Moving plane revisited —	263
5.2.1	A priori estimate of the solution —	263
5.2.2	Positivity of the solution —	266
5.2.3	Uniqueness of the solution —	268
5.2.4	Lipschitz continuity of the nonlinearity —	271
5.2.5	Poincaré metric and symmetry —	272
5.3	Method of scaling —	276
5.3.1	Boltzmann–Poisson equation revisited —	276
5.3.2	Blow-up analysis —	278
5.3.3	Brezis–Merle’s inequality and related topics —	281
5.3.4	Vanishing residual —	284
5.3.5	Higher-dimensional case —	288
5.4	Differential inequality $-\Delta u \leq f(u)$ —	298
5.4.1	Blow-up profile —	298
5.4.2	A comparison theorem —	301
5.4.3	Mean value theorem in higher dimension —	305
5.4.4	Pattern formation —	307
5.5	Trudinger–Moser inequality revisited —	309
5.5.1	Threshold of asymptotics —	309
5.5.2	Fundamental theorem —	311
5.5.3	Nonuniformness —	317
5.5.4	Sharpness of Moser’s inequality —	320
5.5.5	Uniformness near the origin —	322
5.5.6	Carleson–Chang’s theorem —	327
5.6	Topological methods —	331
5.6.1	Total degree —	331
5.6.2	Sinh–Poisson equation revisited —	333
5.6.3	Topological deformation —	336
5.6.4	Blow-up analysis revisited —	339
5.6.5	Improved Trudinger–Moser inequality —	344
5.6.6	Lucia’s deformation lemma —	350
6	Equations on annulus —	357
6.1	2D case —	357
6.1.1	Radial solutions on annulus —	357
6.1.2	Liouville integral of radial solutions —	358
6.1.3	Generation of nonradial solutions —	363
6.1.4	Nonradial bifurcation —	365
6.2	Higher-dimensional case —	367
6.2.1	Radial solutions in higher dimensions —	367
6.2.2	Emden transformation —	370

6.2.3	Boundary pair —	374
6.2.4	Bending arbitrary many times —	377
6.3	Bifurcation from symmetry —	379
6.3.1	Morse indices —	379
6.3.2	Radial Morse indices —	384
6.4	Structure of radial solutions —	386
6.4.1	Summary —	386
6.4.2	Γ -curves —	389
6.4.3	Radial Morse indices revisited —	390
6.4.4	Zone property —	394
7	Hardy spaces and BMO —	395
7.1	Regularity of weak solutions —	395
7.1.1	Dirichlet principle —	395
7.1.2	Existence of weak solutions —	397
7.1.3	p -harmonic functions —	400
7.1.4	Local maximum principle —	402
7.1.5	Local minimum principle —	406
7.1.6	BMO, Harnack inequality, and C^α regularity —	408
7.2	BMO —	412
7.2.1	Poincaré–Sobolev inequality —	412
7.2.2	Calderón–Zygmund decomposition —	415
7.2.3	John–Nirenberg’s inequality —	417
7.3	Hardy spaces —	419
7.3.1	Maximal theorem —	419
7.3.2	Div–Rot lemma —	421
7.3.3	Jacobian estimate —	423
7.4	Harmonic map revisited —	424
7.4.1	Quantized blow-up mechanism —	424
7.4.2	Monotonicity formula —	428
7.4.3	Hardy–BMO structure —	430
7.4.4	Energy concentration —	430
7.4.5	Bubble towers —	432
7.5	L^∞ -estimates —	440
7.5.1	BMO estimate of the Green function —	440
7.5.2	Wente’s inequality —	443
7.5.3	Brezis–Merle’s inequality revisited —	445
7.5.4	System of chemotaxis —	446

Bibliography — 453

Index — 469
