Contents

Preface — V

Kai Diethelm

Fundamental approaches for the numerical handling of fractional operators and time-fractional differential equations —— 1

Xuan Zhao and Zhi-Zhong Sun

Time-fractional derivatives — 23

Hengfei Ding and Changpin Li

High-order finite difference methods for fractional partial differential equations —— 49

Chuanju Xu

Spectral methods for some kinds of fractional differential equations — 101

Jie Shen and Changtao Sheng

Spectral methods for fractional differential equations using generalized Jacobi functions —— 127

Anna Lischke, Mohsen Zayernouri, and Zhonggiang Zhang

Spectral and spectral element methods for fractional advection—diffusion—reaction equations —— 157

Weihua Deng and Xudong Wang

Discontinuous Galerkin and finite element methods — 185

Fawang Liu and Ian Turner

Numerical methods for time-space fractional partial differential equations — 209

Guofei Pang and Wen Chen

Comparison of two radial basis collocation methods for Poisson problems with fractional Laplacian —— 249

Yong Zhang and Mark Meerschaert

Particle tracking solutions of vector fractional differential equations: A review —— 275

X — Contents

Martin Stynes

Singularities — 287

Hong Wang

Fast numerical methods for space-fractional partial differential equations —— 307

Roberto Garrappa and Marina Popolizio

Fast methods for the computation of the Mittag-Leffler function — 329

Index — 347
