Preface — V

Preface for the second edition — XI

<b>1</b>	<b>Directed and undirected graphs — 1</b>
1.1	Formal description of graphs — 1
1.2	Connectedness and equivalence relations — 4
1.3	Some special graphs — 5
1.4	Homomorphisms — 8
1.5	Half-, locally, quasi-strong, and metric homomorphisms — 12
1.6	The factor graph, congruences, and the homomorphism theorem — 15
	Factor graphs — 15
	The homomorphism theorem — 17
1.7	The endomorphism type of a graph — 19
1.8	On the genus of a graph — 24
1.9	Comments: homomorphisms produce models — 27
<b>2</b>	<b>Graphs and matrices — 29</b>
2.1	Adjacency matrix — 29
	Isomorphic graphs and the adjacency matrix — 30
	Components and the adjacency matrix — 31
	Adjacency list — 33
2.2	Incidence matrix — 33
2.3	Distances in graphs — 34
	The adjacency matrix and paths — 35
	The adjacency matrix, the distance matrix, and circuits — 35
2.4	Endomorphisms and commuting graphs — 36
2.5	The characteristic polynomial and eigenvalues — 37
2.6	Circulant graphs — 41
2.7	Eigenvalues and the combinatorial structure — 44
	Cospectral graphs — 44
	Eigenvalues, diameter, and regularity — 45
	Automorphisms and eigenvalues — 46
2.8	Comments — 47
<b>3</b>	<b>Categories and functors — 49</b>
3.1	Categories — 49
	Categories with sets and mappings, I — 50
	Constructs, and small and large categories — 50

	Special objects and morphisms — 51
	Categories with sets and mappings, II — 51
	Categories with graphs — 52
	Other categories — 53
3.2	Products & Co. — 54
	Coproducts — 54
	Products — 56
	Tensor products — 58
	Categories with sets and mappings, III — 58
3.3	Functors — 59
	Covariant and contravariant functors — 59
	Composition of functors — 59
	Special functors—examples — 60
	Mor functors — 60
	Properties of functors — 61
3.4	Comments — 63
4	<b>Binary graph operations — 65</b>
4.1	Unions — 65
	The union — 65
	The join — 67
	The edge sum — 67
4.2	Products — 71
	The cross product — 71
	The coamalgamated product — 73
	The disjunction of graphs — 75
4.3	Tensor products and the product in <i>EGra</i> — 75
	The box product — 75
	The boxcross product — 78
	The complete product — 79
	Synopsis of the results — 79
	Product constructions as functors in one variable — 80
4.4	Lexicographic products and the corona — 80
	Lexicographic products — 80
	The corona — 82
4.5	Algebraic properties — 83
4.6	Mor constructions — 84
	Diamond products — 84
	Left inverses for tensor functors — 86
	Power products — 87
	Left inverses to product functors — 88
4.7	Comments — 89

<b>5</b>	<b>Line graph and other unary graph operations — 91</b>
5.1	Complements, opposite graphs, and geometric duals — 91
5.2	The line graph — 92
	Determinability of $G$ by $LG$ — 95
5.3	Spectra of line graphs — 97
	Which graphs are line graphs? — 100
5.4	The total graph — 102
5.5	The tree graph — 103
5.6	Comments — 103
<b>6</b>	<b>Graphs and vector spaces — 105</b>
6.1	Vertex space and edge space — 105
	The boundary and co. — 106
	Matrix representation — 107
6.2	Cycle spaces, bases & Co. — 108
	The cycle space — 108
	The cocycle space — 110
	Orthogonality — 111
	The boundary operator & Co. — 113
6.3	Application: MacLane's planarity criterion — 114
6.4	Homology of graphs — 116
	Exact sequences of vector spaces — 117
	Chain complexes and homology groups of graphs — 117
6.5	Application: number of spanning trees — 119
6.6	Application: electrical networks — 123
6.7	Application: squared rectangles — 128
6.8	Application: transport and shortest paths — 132
6.9	Comments — 135
<b>7</b>	<b>Graphs, groups, and monoids — 137</b>
7.1	Groups of a graph — 137
	Edge group — 138
7.2	Asymmetric graphs and rigid graphs — 138
7.3	Cayley graphs — 145
7.4	Frucht-type results — 147
	Frucht's theorem and its generalization for monoids — 148
7.5	Graph-theoretic requirements — 149
	Smallest graphs for given groups — 149
	Additional properties of group-realizing graphs — 150
7.6	Transformation monoids and permutation groups — 154
7.7	Actions on graphs — 156
	Transitive actions on graphs — 157

	Regular actions — 158
	Fixed point-free actions on graphs — 160
7.8	Comments — 161
<b>8</b>	<b>The characteristic polynomial of graphs — 163</b>
8.1	Eigenvectors of symmetric matrices — 163
	Eigenvalues and connectedness — 164
	Regular graphs and eigenvalues — 165
8.2	Interpretation of the coefficients of $\text{chapo}(G)$ — 166
	Interpretation of the coefficients for undirected graphs — 167
8.3	Characteristic polynomials of trees — 169
8.4	The spectral radius of undirected graphs — 170
	Subgraphs — 170
	Upper bounds — 171
	Lower bounds — 172
8.5	Spectral determinability — 173
	Spectral uniqueness of $K_n$ and $K_{p,q}$ — 173
8.6	Eigenvalues and group actions — 175
	Groups, orbits, and eigenvalues — 176
8.7	Transitive graphs and eigenvalues — 177
	Derogatory graphs — 178
	Graphs with Abelian groups — 179
8.8	Comments — 180
<b>9</b>	<b>Graphs and semigroups — 183</b>
9.1	Semigroups — 183
9.2	End-regular bipartite graphs — 187
	Regular endomorphisms and retracts — 187
	End-regular and End-orthodox connected bipartite graphs — 188
9.3	Locally strong endomorphisms of paths — 189
	Undirected paths — 190
	Directed paths — 192
	Algebraic properties of LEnd — 195
9.4	Wreath product of monoids over an act — 197
9.5	Structure of the strong monoid — 200
	The canonical strong decomposition of $G$ — 200
	Decomposition of SEnd — 202
	A generalized wreath product with a small category — 204
	Cardinality of $\text{SEnd}(G)$ — 205
	Regularity and more for $T_A$ — 206
	Regularity and more for $\text{SEnd}(G)$ — 206
9.6	Comments — 208

<b>10</b>	<b>Compositions, unretractivities, and monoids — 209</b>
10.1	Lexicographic products — 209
10.2	Unretractivities and lexicographic products — 211
10.3	Monoids and lexicographic products — 214
10.4	The union and the join — 217
	The sum of monoids — 217
	The sum of endomorphism monoids — 218
	Unretractivities — 219
10.5	The box product and the cross product — 220
	Unretractivities — 221
	The product of endomorphism monoids — 222
10.6	Comments — 223
<b>11</b>	<b>Cayley graphs of semigroups — 225</b>
11.1	The Cay functor — 225
	Reflection and preservation of morphisms — 227
	Does Cay produce strong homomorphisms? — 228
11.2	Products and equalizers — 229
	Categorical products — 229
	Equalizers — 231
	Other product constructions — 232
11.3	Characterizations of Cayley graphs — 234
	Cayley graphs of right and left groups — 235
	Cayley graphs of strong semilattices of semigroups — 237
	Generating connection sets — 238
	Examples of strong semilattices of (right or left) groups — 241
11.4	Comments — 245
<b>12</b>	<b>Vertex transitive Cayley graphs — 247</b>
12.1	Vertex transitivity — 247
12.2	Application to strong semilattices of right groups — 248
	ColAut( $S, C$ )-vertex transitivity — 250
	Aut( $S, C$ )-vertex transitivity — 251
12.3	Application to strong semilattices of left groups — 253
	Application to Clifford semigroups — 256
12.4	End'( $S, C$ )-vertex transitive Cayley graphs — 257
12.5	Comments — 260
<b>13</b>	<b>Embeddings of Cayley graphs—genus of semigroups — 261</b>
13.1	The genus of a group — 261
	Various results and questions about genera — 268
13.2	On the genus of right groups — 269

	<b>Planar right groups — 270</b>
	<b>Right groups generated by products on the torus and the plane — 279</b>
13.3	<b>On planar Clifford semigroups — 284</b>
	<b>Planar semilattices — 285</b>
	<b>Planar Clifford semigroups with two groups — 287</b>
13.4	<b>Comments — 300</b>
	<b>List of cited papers, theses etc. — 303</b>
	<b>List of books — 307</b>
	<b>Index — 319</b>
	<b>Index of symbols — 327</b>
