Preface — VII

Chapter 1

Introduction on chemical reactors modeling — 1

- 1.1 Chemical reactors modeling — 1
- 1.2 Why Matlab? — 3
 - List of symbols — 5
 - References — 6

Chapter 2

Batch reactors for homogeneous catalysis — 7

- 2.1 Introduction — 7
- 2.2 Single-phase reactors — 7
 - 2.2.1 Mass balance, isothermal reactor — 7
 - 2.2.2 Energy balance — 17
- 2.3 Two-phase reactors — 22
 - 2.3.1 Gas–liquid two-phase reactor — 22
 - 2.3.2 Liquid–liquid two-phase reactor — 33
- 2.4 Fed-batch reactors — 45
 - List of symbols — 48
 - References — 49

Chapter 3

Batch reactors for heterogeneous catalysis — 51

- 3.1 Introduction — 51
- 3.2 Single particle modeling — 51
 - 3.2.1 Fluid–solid external mass transfer — 51
 - 3.2.2 Intraparticle mass and heat transfer — 53
 - 3.2.3 Simulation strategy: *pdepe* MATLAB function — 59
 - 3.2.4 Nonuniform active phase distributions — 65
- 3.3 Fluid–solid batch reactors — 70
 - 3.3.1 Mass and energy balances derivation — 70
 - 3.3.2 Simulation strategy: finite difference method — 71
- 3.4 Three-phase batch reactors — 73
 - List of symbols — 74
 - References — 75

Chapter 4

Ideal single-phase continuous reactors for homogeneous catalysis — 77

- 4.1 Introduction — 77
- 4.2 Continuous plug flow reactor — 77
 - 4.2.1 Mass balance, isothermal PFR reactor — 78
 - 4.2.2 Energy balance — 86
- 4.3 Two-phase plug-flow reactors — 92
 - 4.3.1 Gas–liquid two-phase continuous PFR — 92
 - 4.3.2 Liquid–liquid two-phase tubular reactors — 97
- 4.4 Continuous stirred tank reactor — 104
 - 4.4.1 Mass balance for a CSTR reactor — 105
 - 4.4.2 Energy balance for a CSTR reactor — 110
 - 4.4.3 Two-phase CSTR reactors — 111
- 4.5 Numerical oscillations and instabilities in a CSTR reactor — 120
- 4.6 PFR reactor with recycle — 125
 - List of symbols — 132
 - References — 134

Chapter 5

Real reactors for heterogeneous catalysis — 135

- 5.1 Introduction — 135
- 5.2 Tank-in-series model — 136
- 5.3 Axial dispersion model — 139
- 5.4 Laminar flow model — 147
 - List of symbols — 152
 - References — 152

Chapter 6

Packed bed reactors — 153

- 6.1 Introduction — 153
- 6.2 Ideal packed bed reactor — 153
- 6.3 Packed bed with axial and radial dispersion — 167
- 6.4 Packed bed with fluid–solid mass transfer resistance — 171
- 6.5 Intraparticle diffusion model — 175
 - List of symbols — 181
 - References — 182

Chapter 7

Parameters estimation — 183

- 7.1 Introduction — 183
- 7.2 Common minimization strategies — 183
 - 7.2.1 Deterministic minimization algorithms — 184

7.2.2	Evolutionary minimization algorithms —	185
7.3	Objective function definition —	186
7.4	Statistics: confidence intervals, covariance and correlation matrix —	187
7.5	Quality of fit and discrimination among rival models —	199
7.6	Sensitivity analysis —	201
7.7	Residual analysis —	202
7.8	Parity plot —	216
	List of symbols —	225
	References —	226

Chapter 8

Statistical techniques applied to chemical processes — 227

8.1	Introduction —	227
8.2	Optimization —	227
8.3	Design of experiments —	254
	List of symbols —	261
	References —	263

Chapter 9

Case studies in chemical reaction engineering — 265

9.1	Introduction —	265
9.2	Shrinking particle model —	265
9.2.1	Basic assumption of the model —	266
9.2.2	Mass balances and film thickness —	266
9.2.3	Dimensionless model and solution procedure —	268
9.2.4	Contribution analysis —	269
9.2.5	Simulation example —	270
9.3	Falling film reactors modeling —	272
9.3.1	Introduction —	272
9.3.2	Reactor model —	272
9.3.3	Modeling strategy —	273
9.3.4	Simulation example —	274
9.4	Microreactors modeling —	277
9.4.1	Introduction —	277
9.4.2	Modeling approach —	277
9.4.3	Numerical methods —	278
9.4.4	Modeling results of specific cases —	278
9.5	Reactive chromatography modeling —	279
9.5.1	Introduction —	279
9.5.2	Chromatographic reactor model —	280

9.5.3	Modeling approach —	281
9.5.4	Example of application —	281
	List of symbols —	282
	References —	284

Word Index —	287
