Foreword — V

Introduction — VII

Acknowledgments — XI

I Perspectives on mathematics and language of different disciplines

Caleb Everett

The diversity of linguistic references to quantities across the world's cultures — 3

Julia Hartmann and Annemarie Fritz

Language and mathematics: How children learn arithmetic through specifying their lexical concepts of natural numbers — 21

Elise Klein, Stefanie Jung, and Liane Kaufmann

A neuropsychological perspective on the development of and the interrelation between numerical and language processing — 40

Ann Dowker

Culture and language: How do these influence arithmetic? — 65

Susanne Prediger and Ángela Uribe

Exploiting the epistemic role of multilingual resources in superdiverse mathematics classrooms: Design principles and insights into students' learning processes — 80

II Language learning and mathematics development

Julia Bahnmüller, Júlia Beatriz Lopes-Silva, Vitor Geraldi Haase, Ricardo Moura, and Korbinian Moeller

Ties of math and language: A cognitive developmental perspective — 101

Desoete Annemie, Ceulemans Annelies, Sofie Rousseau,
and Mathieu Roelants

**The relative importance of “parental talk” as a predictor of the diversity
in mathematics learning in young children — 132**

Pixner Silvia and Dresen Verena

**Number words, quantifiers, and arithmetic development
with particular respect of zero — 149**

III Multilingualism and mathematical learning

Sarit Ashkenazi and Nitza Mark-Zigdon

**Directionality of number space associations in Hebrew-speaking
children: Evidence from number line estimation — 163**

Helga Klein

Exact number representations in first and second language — 183

Sophie Martini, Christine Schiltz, Antoine Fischbach, and Sonja Ugen

**Identifying math and reading difficulties of multilingual children: Effects
of different cut-offs and reference groups — 200**

IV Vision, hearing, and speech language impairments

Kirsten Schuchardt and Claudia Mähler

Numerical competencies in preschoolers with language difficulties — 231

Elisabeth Moser Opitz and Verena Schindler

**Disentangling the relationship between mathematical learning disability
and second-language acquisition — 245**

Margot Buyle, Cathy Marlair, and Virginie Crollen

**Blindness and deafness: A window to study the visual and verbal basis of
the number sense — 265**

V Language as learning resource in school

Ricardo Moura, Vitor Geraldi Haase, Júlia Beatriz Lopes-Silva,
Luana Teixeira Batista, Fernanda Rocha de Freitas, Julia Bahnmueller,
and Korbinian Moeller

**Reading and writing words and numbers: Similarities, differences, and
implications — 291**

Sarah R. Powell, Samantha E. Bos, and Xin Lin

**The assessment of mathematics vocabulary in the elementary
and middle school grades — 313**

Judit Moschkovich and Judith Scott

Language issues in mathematics word problems for English learners — 331

Moritz Herzog, Erkan Gürsoy, Caroline Long, and Annemarie Fritz

Fifth-grade students' production of mathematical word problems — 350

Sabine Stephany

**The influence of reading comprehension on solving mathematical word
problems: A situation model approach — 370**

Farran Mackay, Jantien Smit, Arthur Bakker, and Ronald Keijzer

**Supporting teachers to scaffold students' language for mathematical
learning — 396**
