Introduction — IX

1 Vectors and the geometry of space — 1

- 1.1 Vectors — 1
 - 1.1.1 Concepts of vectors — 1
 - 1.1.2 Linear operations involving vectors — 2
 - 1.1.3 Coordinate systems in three-dimensional space — 3
 - 1.1.4 Representing vectors using coordinates — 5
 - 1.1.5 Lengths, direction angles — 7
- 1.2 Dot product, cross product, and triple product — 9
 - 1.2.1 The dot product — 9
 - 1.2.2 Projections — 12
 - 1.2.3 The cross product — 13
 - 1.2.4 Scalar triple product — 17
- 1.3 Equations of lines and planes — 18
 - 1.3.1 Lines — 18
 - 1.3.2 Planes — 23
- 1.4 Curves and vector-valued functions — 30
- 1.5 Calculus of vector-valued functions — 32
 - 1.5.1 Limits, derivatives, and tangent vectors — 32
 - 1.5.2 Antiderivatives and definite integrals — 35
 - 1.5.3 Length of curves, curvatures, TNB frame — 37
- 1.6 Surfaces in space — 42
 - 1.6.1 Graph of an equation $F(x, y, z) = 0$ — 42
 - 1.6.2 Cylinder — 44
 - 1.6.3 Quadric surfaces — 46
 - 1.6.4 Surface of revolution — 46
- 1.7 Parameterized surfaces — 49
- 1.8 Intersecting surfaces and projection curves — 50
- 1.9 Regions bounded by surfaces — 56
- 1.10 Review — 57
- 1.11 Exercises — 59
 - 1.11.1 Vectors — 59
 - 1.11.2 Lines and planes in space — 60
 - 1.11.3 Curves and surfaces in space — 61

2 Functions of multiple variables — 65

- 2.1 Functions of multiple variables — 65
 - 2.1.1 Definitions — 65
 - 2.1.2 Graphs and level curves — 67

2.1.3	Functions of more than two variables —	69
2.1.4	Limits —	70
2.1.5	Continuity —	75
2.2	Partial derivatives —	76
2.2.1	Definition —	76
2.2.2	Interpretations of partial derivatives —	80
2.2.3	Partial derivatives of higher order —	82
2.3	Total differential —	83
2.3.1	Linearization and differentiability —	83
2.3.2	The total differential —	89
2.3.3	The linear/differential approximation —	90
2.4	The chain rule —	92
2.4.1	The chain rule with one independent variable —	92
2.4.2	The chain rule with more than one independent variable —	94
2.4.3	Partial derivatives for abstract functions —	97
2.5	The Taylor expansion —	98
2.6	Implicit differentiation —	101
2.6.1	Functions implicitly defined by a single equation —	101
2.6.2	Functions defined implicitly by systems of equations —	103
2.7	Tangent lines and tangent planes —	106
2.7.1	Tangent lines and normal planes to a curve —	106
2.7.2	Tangent planes and normal lines to a surface —	109
2.8	Directional derivatives and gradient vectors —	113
2.9	Maximum and minimum values —	122
2.9.1	Extrema of functions of two variables —	122
2.9.2	Lagrange multipliers —	130
2.10	Review —	136
2.11	Exercises —	138
2.11.1	Functions of two variables —	138
2.11.2	Partial derivatives and differentiability —	139
2.11.3	Chain rules and implicit differentiation —	140
2.11.4	Tangent lines/planes, directional derivatives —	141
2.11.5	Maximum/minimum problems —	142
3	Multiple integrals —	145
3.1	Definition and properties —	145
3.2	Double integrals in rectangular coordinates —	150
3.3	Double integral in polar coordinates —	157
3.4	Change of variables formula for double integrals —	161
3.5	Triple integrals —	165
3.5.1	Triple integrals in rectangular coordinates —	165
3.5.2	Cylindrical and spherical coordinates —	175

3.6	Change of variables in triple integrals —	179
3.7	Other applications of multiple integrals —	181
3.7.1	Surface area —	181
3.7.2	Center of mass, moment of inertia —	187
3.8	Review —	188
3.9	Exercises —	191
3.9.1	Double integrals —	191
3.9.2	Triple integrals —	192
3.9.3	Other applications of multiple integrals —	193
4	Line and surface integrals —	195
4.1	Line integral with respect to arc length —	195
4.1.1	Definition and properties —	196
4.1.2	Evaluating a line integral, $\int_C f(x, y) ds$, in $\mathbb{R}^2$ —	197
4.1.3	Line integrals $\int_C f(x, y, z) ds$ in $\mathbb{R}^3$ —	199
4.2	Line integral of a vector field —	201
4.2.1	Vector fields —	201
4.2.2	The line integral of a vector field along a curve C —	202
4.3	The fundamental theorem of line integrals —	208
4.4	Green's theorem: circulation-curl form —	216
4.4.1	Positive oriented simple curve and simply connected region —	216
4.4.2	Circulation around a closed curve —	217
4.4.3	Circulation density —	217
4.4.4	Green's theorem: circulation-curl form —	219
4.4.5	Applications of Green's theorem in circulation-curl form —	222
4.5	Green's theorem: flux-divergence form —	231
4.5.1	Flux —	231
4.5.2	Flux density – divergence —	232
4.5.3	The divergence-flux form of Green's theorem —	233
4.6	Source-free vector fields —	235
4.7	Surface integral with respect to surface area —	237
4.8	Surface integrals of vector fields —	241
4.8.1	Orientable surfaces —	241
4.8.2	Flux integral $\iint_S (\mathbf{F} \cdot \mathbf{N}) dS$ —	242
4.9	Divergence theorem —	248
4.9.1	Divergence of a three-dimensional vector field —	248
4.9.2	Divergence theorem —	250
4.10	Stokes theorem —	256
4.10.1	The curl of a three-dimensional vector field —	256
4.10.2	Stokes theorem —	258
4.11	Review —	265

4.12	Exercises —	268
4.12.1	Line integrals —	268
4.12.2	Surface integrals —	269
5	Introduction to ordinary differential equations —	273
5.1	Introduction —	273
5.2	First-order ODEs —	275
5.2.1	General and particular solutions and direction fields —	275
5.2.2	Separable differential equations —	277
5.2.3	Substitution methods —	279
5.2.4	Exact differential equations —	281
5.2.5	First-order linear differential equations —	283
5.3	Second-order ODEs —	287
5.3.1	Reducible second-order equations —	287
5.3.2	Second-order linear differential equations —	291
5.3.3	Variation of parameters —	307
5.4	Other ways of solving differential equations —	308
5.4.1	Power series method —	309
5.4.2	Numerical approximation: Euler's method —	310
5.5	Review —	313
5.6	Exercises —	315
5.6.1	Introduction to differential equations —	315
5.6.2	First-order differential equations —	315
5.6.3	Second-order differential equations —	316

Further reading — 319
