Foreword — V

List of contributors — IX

Claudia Weidenthaler

1 In situ tools for the exploration of structure–property relationships — 1

Sebastian Bette and Robert E. Dinnebier

2 Understanding stacking disorder in layered functional materials using powder diffraction — 55

Alain Lafond, Catherine Guillot-Deudon, Michaël Paris, Maria Teresa Caldes, and Stéphane Jobic

3 Crystal chemistry investigations on photovoltaic chalcogenides — 93

Susan Schorr and Galina Gurieva

4 Energy band gap variations in chalcogenide compound semiconductors: influence of crystal structure, structural disorder, and compositional variations — 123

Joachim Breternitz

5 Halide semiconductors: symmetry relations in the perovskite type and beyond — 153

Nicole Knoblauch and Martin Schmücker

6 Structural ordering in ceria-based suboxides applied for thermochemical water splitting — 185

Christophe Didier, Wei Kong Pang, and Vanessa K. Peterson

7 The influence of electrode material crystal structure on battery performance — 217

Arndt Remhof and Radovan Černý

8 Hydroborates as novel solid-state electrolytes — 265

Christiane Stephan-Scherb

9 Crystallographic challenges in corrosion research — 291

Daniel Fritsch

- 10 Crystallographic diffraction techniques and density functional theory:
two sides of the same coin? — 317**

Bernd Hinrichsen

- 11 Crystallographic deviants: modelling symmetry shirkers — 339**

Index — 355
