Preface to the first edition — V

Preface to the second edition — VII

Preface to the third edition — IX

0 Introduction — 1

1 Lévy processes and Itô calculus — 5

- 1.1 Poisson random measure and Lévy processes — 5
 - 1.1.1 Lévy processes — 5
 - 1.1.2 Examples of Lévy processes — 9
 - 1.1.3 The stochastic integral for a finite variation process and related topics — 14
- 1.2 Basic material for SDEs with jumps — 16
 - 1.2.1 Martingales and semimartingales — 17
 - 1.2.2 Stochastic integral with respect to semimartingales — 19
 - 1.2.3 Kunita–Watanabe inequalities — 28
 - 1.2.4 Doléans–Dade exponential and Girsanov transformation — 31
- 1.3 Itô processes with jumps — 35
 - 1.3.1 Pure jump type SDE — 40

2 Perturbations and properties of the probability law — 47

- 2.1 Integration-by-parts on Poisson space — 47
 - 2.1.1 Bismut’s method — 50
 - 2.1.2 Picard’s method — 61
 - 2.1.3 Some previous methods — 67
- 2.2 Methods of finding the asymptotic bounds (I) — 77
 - 2.2.1 Markov chain approximation — 78
 - 2.2.2 Proof of Theorem 2.3 — 82
 - 2.2.3 Proof of lemmas — 89
- 2.3 Methods of finding the asymptotic bounds (II) — 101
 - 2.3.1 Polygonal geometry — 101
 - 2.3.2 Proof of Theorem 2.4 — 102
 - 2.3.3 Example of Theorem 2.4 – easy cases — 112
- 2.4 Summary of short-time asymptotic bounds — 120
 - 2.4.1 Case that $\mu(dz)$ is absolutely continuous with respect to the m -dimensional Lebesgue measure dz — 120
 - 2.4.2 Case that $\mu(dz)$ is singular with respect to dz — 121
- 2.5 Auxiliary topics — 123
 - 2.5.1 Marcus’ canonical processes — 124

2.5.2	Absolute continuity of the infinitely divisible laws —	126
2.5.3	Chain movement approximation —	132
2.5.4	Support theorem for canonical processes —	142
3	Analysis of Wiener–Poisson functionals —	146
3.1	Calculus of functionals on the Wiener space —	146
3.1.1	Definition of the Malliavin–Shigekawa derivative D_t —	148
3.1.2	Adjoint operator $\delta = D^*$ —	153
3.2	Calculus of functionals on the Poisson space —	155
3.2.1	One-dimensional case —	155
3.2.2	Multidimensional case —	159
3.2.3	Characterization of the Poisson space —	162
3.3	Sobolev space for functionals on the Wiener–Poisson space —	166
3.3.1	The Wiener space —	167
3.3.2	The Poisson space —	169
3.3.3	The Wiener–Poisson space —	191
3.4	Relation with the Malliavin operator —	204
3.5	Composition on the Wiener–Poisson space (I) – general theory —	206
3.5.1	Composition with an element in $\mathcal{S}'$ —	206
3.5.2	Sufficient condition for the composition —	216
3.6	Smoothness of the density for Itô processes —	223
3.6.1	Preliminaries —	223
3.6.2	Big perturbations —	231
3.6.3	Concatenation (I) —	235
3.6.4	Concatenation (II) – the case that (D) may fail —	238
3.6.5	More on the density —	244
3.7	Composition on the Wiener–Poisson space (II) – Itô processes —	261
4	Applications —	265
4.1	Asymptotic expansion of the SDE —	265
4.1.1	Analysis on the stochastic model —	268
4.1.2	Asymptotic expansion of the density —	291
4.1.3	Examples of asymptotic expansions —	295
4.2	Optimal consumption problem —	301
4.2.1	Setting of the optimal consumption —	302
4.2.2	Viscosity solutions —	305
4.2.3	Regularity of solutions —	324
4.2.4	Optimal consumption —	328
4.2.5	Historical sketch —	331
A	Appendix —	335
A.1	Notes and trivial matters —	335

A.1.1	Notes —	335
A.1.2	Ramsey theory —	339
A.1.3	A small application to neural cell theory —	340

Bibliography — 347

List of symbols — 357

Index — 359
