

Contents

Chapter 1

Introduction to Machine Learning — 1

- 1.1 What Is Machine Learning? — 1
 - 1.1.1 Definition of Machine Learning — 1
 - 1.1.2 Historical Background — 2
 - 1.1.3 Types of Machine Learning — 4
 - 1.1.4 Applications of Machine Learning — 7
 - 1.1.5 Challenges in Machine Learning — 8
- 1.2 Python in the Machine Learning Landscape — 11
 - 1.2.1 Why Python for Machine Learning? — 11
 - 1.2.2 Popular Python Libraries for ML — 12
 - 1.2.3 Python vs Other Programming Languages in ML — 13
 - 1.2.4 Community and Resources for Python ML — 14
- 1.3 Setting Up Your Python Environment — 15
 - 1.3.1 Installing Python — 15
 - 1.3.2 Virtual Environments and Why They're Important — 16
 - 1.3.3 Essential Python Libraries for ML — 17
 - 1.3.4 Using Package Managers: Pip and Conda — 19
 - 1.3.5 Setting Up Jupyter Notebook — 20
 - 1.3.6 Best Practices for Managing ML Projects in Python — 22
- Summary — 25
- Exercise (MCQs) — 26
- Answers — 27
- Fill in the Blanks — 27
- Answers — 28
- Descriptive Questions — 28

Chapter 2

Basics of Python Programming — 30

- 2.1 Why Python? — 30
 - 2.1.1 Drawbacks of Python — 30
 - 2.1.2 History of Python — 31
 - 2.1.3 Major Features of Python — 31
 - 2.1.4 Market Demand — 32
 - 2.1.5 Why Python in Mobile App Development? — 33
 - 2.1.6 Python Versions — 36
- 2.2 Python Syntax and Structure — 36
 - 2.2.1 Indentation and Whitespace — 36
 - 2.2.2 Comments and Documentation — 37
- 2.3 Data Types and Variables — 38

2.3.1	Primitive Data Types —	39
2.3.2	Lists and Tuples —	39
2.3.3	Dictionaries and Sets —	50
2.4	Control Structures —	60
2.4.1	Conditional Statements —	60
2.4.2	Loops —	62
2.5	Functions and Modules —	63
2.5.1	Defining Functions —	63
2.5.2	Lambda Functions —	65
2.5.3	Modules and Packages —	66
2.6	Working with Files —	68
2.6.1	File I/O —	68
2.7	Working with Libraries —	72
2.7.1	Importing Libraries —	72
2.7.2	Popular Python Libraries Overview —	73
2.8	Object-Oriented Programming in Python —	77
2.8.1	Classes and Objects —	77
2.8.2	Inheritance and Polymorphism —	80
	Summary —	85
	Exercise (MCQs) —	85
	Answers —	87
	Fill in the Blanks —	87
	Answers —	88
	Descriptive Questions —	88

Chapter 3

Data Preprocessing in Python — 90

3.1	Numerical and Scientific Computing Using NumPy and SciPy —	90
3.1.1	Numerical Computations with NumPy —	90
3.1.2	Scientific Computations with SciPy —	105
3.2	Loading Data with Pandas —	109
3.2.1	DataFrame and Series —	109
3.2.2	Data Manipulation with Pandas —	114
3.3	Data Cleaning and Transformation —	120
3.3.1	Handling Missing Data —	121
3.3.2	Data Type Conversions —	122
3.4	Feature Engineering —	123
3.4.1	Encoding Categorical Variables —	124
3.4.2	Feature Scaling —	126
3.5	Data Visualization with Matplotlib and Seaborn —	129
3.5.1	Basic Plotting with Matplotlib —	130
3.5.2	Advanced Visualizations with Seaborn —	140

3.6	Handling Imbalanced Data —	143
3.6.1	Resampling Techniques —	144
3.6.2	Synthetic Data Generation —	145
	Summary —	147
	Exercise (MCQs) —	147
	Answers —	149
	Fill in the Blanks —	149
	Answers —	149
	Descriptive Questions —	150

Chapter 4

Foundations of Machine Learning — 152

4.1	Supervised vs Unsupervised Learning —	153
4.1.1	Classification vs Regression —	154
4.1.2	Clustering vs Association —	156
4.2	Overfitting and Regularization —	159
4.2.1	Bias-Variance Trade-Off —	159
4.2.2	L1 and L2 Regularization —	163
4.3	Evaluation Metrics —	167
4.3.1	Metrics for Classification —	168
4.3.2	Metrics for Regression —	171
4.4	Cross-Validation —	175
4.4.1	k-Fold Cross-Validation —	176
4.4.2	Leave-One-Out and Stratified K-Fold —	178
	Summary —	182
	Exercise (MCQs) —	183
	Answers —	185
	Fill in the Blanks —	186
	Answers —	186
	Descriptive Questions —	187

Chapter 5

Classic Machine Learning Algorithms — 188

5.1	Linear Regression —	189
5.1.1	Simple Linear Regression —	190
5.1.2	Multiple Linear Regression —	197
5.1.3	Polynomial Regression —	203
5.2	Logistic Regression —	206
5.2.1	Binary Classification —	210
5.2.2	Multiclass Classification —	214
5.2.3	Regularization in Logistic Regression —	217
5.3	Decision Trees and Random Forests —	222

5.3.1	Building Decision Trees —	224
5.3.2	Entropy and Information Gain —	230
5.3.3	Random Forests and Bagging —	234
5.4	Support Vector Machines —	239
5.4.1	Linear SVM —	242
5.4.2	Kernel SVM —	250
5.4.3	Hyperparameter Tuning in SVM —	255
5.5	K-Means Clustering —	260
5.5.1	Clustering Basics —	261
5.5.2	Selecting the Number of Clusters —	262
5.6	Principal Component Analysis —	270
5.6.1	Dimensionality Reduction —	273
5.6.2	Eigenvectors and Eigenvalues —	275
5.7	Naive Bayes —	281
5.7.1	Gaussian Naive Bayes —	285
5.7.2	Multinomial Naive Bayes —	293
5.8	Ensemble Methods: Boosting, Bagging —	297
5.8.1	Bagging and Boosting Overview —	298
5.8.2	AdaBoost and Gradient Boosting —	303
	Summary —	310
	Exercise (MCQs) —	311
	Answers —	313
	Fill in the Blanks —	313
	Answers —	314
	Descriptive Questions —	314

Chapter 6

Advanced Machine Learning Techniques — **316**

6.1	Gradient Boosted Trees: XGBoost and LightGBM —	316
6.1.1	XGBoost Algorithm —	319
6.1.2	LightGBM Versus XGBoost —	327
6.2	Kernel Methods —	331
6.2.1	Kernel Tricks —	332
6.2.2	Radial Basis Function (RBF) Kernel —	333
6.2.3	Clustering Techniques Beyond k-Means —	336
6.3	Anomaly Detection —	347
6.3.1	Statistical Methods —	347
6.3.2	Distance-Based Methods —	350
6.4	Clustering —	351
6.4.1	Isolation Forest —	352
6.4.2	Density-Based Methods —	352
6.4.3	Other Techniques —	353

Summary —	354
Exercise (MCQs) —	356
Descriptive Type Questions —	358
Fill in the Blanks —	359
Answers —	359
True and False —	359

Chapter 7

Neural Networks and Deep Learning — 360

7.1	Introduction to Neural Networks —	360
7.2	Perceptron —	362
7.2.1	Structure of Perceptron —	362
7.2.2	Function of Perceptron —	363
7.2.3	Where to Use Perceptron —	363
7.2.4	Where to Use Activation Function —	363
7.3	TensorFlow —	367
7.3.1	Computational Graph —	367
7.3.2	Eager Execution —	368
7.3.3	Keras —	369
7.3.4	Sessions —	370
7.3.5	Common Operations —	370
7.4	Implementing Neural Network Using TensorFlow —	370
7.5	Building a Neural Network Using Keras Framework —	373
7.5.1	Difference between Keras and Tensorflow —	373
7.6	Convolutional Neural Network (CNN) —	374
7.6.1	Model: "sequential_2" —	386
7.6.2	CNN Architecture —	389
7.7	Dropout Layers —	390
7.8	Recurrent Neural Networks (RNNs) —	391
7.8.1	Types of RNNs —	391
7.9	Sequence-to-Sequence Models —	398
7.10	Transfer Learning —	400
7.11	Using Pretrained Models —	406
7.12	Fine-Tuning and Feature Extraction —	407
7.12.1	Choosing the Right Approach to Fine-Tune —	407
7.13	Generative Adversarial Networks (GANs) —	408
7.13.1	Architecture of GANs —	408
7.13.2	Best Practices of GANs —	409
7.13.3	Application of GANs —	409
7.14	Regularization and Optimization in Deep Learning —	409
7.15	Batch Normalization —	413
7.15.1	How BatchNorm Works? —	414

7.15.2	Best Practices of BatchNorm —	414
7.16	Gradient Clipping —	414
7.16.1	Advantages of Gradient Clipping —	415
	Summary —	419
	Exercise (MCQs) —	421
	Answer Key —	422
	Some Basic Question —	423
	Fill in the Blanks —	423
	Answers —	423

Chapter 8

Specialized Applications and Case Studies — 424

8.1	Introduction to Natural Language Processing (NLP) —	424
8.1.1	Tokenization —	428
8.1.2	Word Embeddings —	429
8.1.3	Sequence Modeling for NLP —	431
8.2	Time-Series Forecasting —	433
8.2.1	Autoregressive Integrated Moving Average (ARIMA) Models —	434
8.2.2	Prophet and Neural Networks for Time Series —	436
8.3	Recommender Systems —	438
8.4	Computer Vision Applications —	443
8.4.1	Object Detection and Segmentation —	445
8.5	Reinforcement Learning —	447
8.5.1	Core Elements of Reinforcement Learning —	447
8.5.2	Learning Process —	448
8.6	Application of Reinforcement Learning —	455
8.7	Challenges of Reinforcement Learning —	455
8.8	Q-learning —	455
8.9	Deep Q Networks —	457
8.10	Policy Gradient Methods —	459
	Summary —	464
	Exercise (MCQs) —	465
	Answers Key —	467
	Some Basic Question —	468
	Fill in the Blanks —	469
	Answers —	469
