**Preface — V**

**Notations — VII**

**Introduction — XVII**

## Part I: Trace and integral formulas

<b>1</b>	<b>Bounded operators and pseudodifferential operators — 3</b>
1.1	Bounded operators on Hilbert space and traces — <b>3</b>
1.1.1	Singular values and ideals — <b>4</b>
1.1.2	Traces on $\mathcal{L}_{1,\infty}$ — <b>7</b>
1.2	Submajorization and interpolation — <b>12</b>
1.2.1	Fully symmetric ideals — <b>12</b>
1.2.2	Lorentz function spaces — <b>15</b>
1.2.3	Noncommutative Lorentz spaces — <b>20</b>
1.3	Operator inequalities — <b>24</b>
1.3.1	Submajorization and majorization inequalities — <b>24</b>
1.3.2	Hölder inequalities and commutators in Lorentz ideals — <b>31</b>
1.4	Double operator integrals — <b>41</b>
1.4.1	Integration of operator-valued functions in the weak operator topology — <b>41</b>
1.4.2	Definition of a double operator integral — <b>47</b>
1.4.3	Double operator integrals and estimates of commutators — <b>50</b>
1.5	Compactness estimates of product-convolution operators — <b>54</b>
1.5.1	Product-convolution operators on the Euclidean plane — <b>54</b>
1.5.2	Hilbert–Schmidt operators on the Euclidean plane and the trace formula — <b>57</b>
1.5.3	Compactness of product-convolution operators for square-integrable functions — <b>60</b>
1.5.4	Abstract product-convolution estimates — <b>63</b>
1.5.5	Estimates for product-convolution operators on the Euclidean plane — <b>74</b>
1.5.6	Estimates for product-convolution operators on tori — <b>78</b>
1.6	Pseudodifferential operators — <b>81</b>
1.6.1	The Schwartz space and distributions — <b>82</b>
1.6.2	Symbols and operators — <b>83</b>

1.6.3	Sobolev spaces and mapping properties of pseudodifferential operators — <b>87</b>
1.6.4	Inverses and complex powers of pseudodifferential operators — <b>92</b>
1.6.5	Compactness estimates for pseudodifferential operators — <b>107</b>
1.6.6	Asymptotic expansion of symbols — <b>110</b>
1.6.7	The noncommutative residue — <b>115</b>
1.7	Notes — <b>118</b>
<b>2</b>	<b>Trace formulas — 129</b>
2.1	Introduction — <b>129</b>
2.2	The Banach algebra of modulated functions — <b>132</b>
2.2.1	Closure of the algebra of modulated functions — <b>133</b>
2.2.2	Square modulated functions and behavior of the Fourier transform — <b>134</b>
2.3	Laplacian modulated operators — <b>136</b>
2.3.1	Symbols and characterization of Laplacian modulated operators — <b>136</b>
2.3.2	Examples of Laplacian modulated operators — <b>141</b>
2.3.3	Pseudodifferential operators are Laplacian modulated — <b>143</b>
2.4	Eigenvalues of Laplacian modulated operators — <b>145</b>
2.5	Trace formulas for Laplacian modulated operators — <b>152</b>
2.5.1	Computing traces from symbols — <b>152</b>
2.5.2	Connes' trace theorem — <b>159</b>
2.6	Notes — <b>162</b>
<b>3</b>	<b>Integration formulas — 167</b>
3.1	Introduction — <b>167</b>
3.2	Integration formula for elliptic differential operators and the curved plane — <b>170</b>
3.2.1	Integration formula for elliptic differential operators — <b>171</b>
3.2.2	Integration theorem on a curved plane — <b>177</b>
3.3	Integration of square-integrable functions on $\mathbb{T}^d$ — <b>180</b>
3.4	Integration of compactly supported square-integrable functions on $\mathbb{R}^d$ — <b>185</b>
3.5	Integration formula on the noncommutative torus — <b>190</b>
3.5.1	Definition of the noncommutative torus — <b>190</b>
3.5.2	Differential calculus of the noncommutative torus — <b>191</b>
3.5.3	Product-convolution operators for the noncommutative torus — <b>192</b>
3.5.4	Integration of square-integrable functions on the noncommutative torus — <b>196</b>
3.6	Notes — <b>197</b>

## Part II: The principal symbol mapping in noncommutative geometry

<b>4</b>	<b>Integration formula for the noncommutative plane — 209</b>
4.1	Introduction — 209
4.2	Definition of the noncommutative plane — 214
4.2.1	Canonical commutation relations — 214
4.2.2	Distributions and the Schwartz space of the noncommutative plane — 222
4.2.3	Differentiation for the noncommutative plane — 231
4.2.4	Additional symmetries of the noncommutative plane — 239
4.3	Product-convolution estimates for the noncommutative plane — 241
4.4	Smooth product-convolution estimates for the noncommutative plane — 251
4.4.1	Integral formula for derivations of operators acting on invariant subspaces — 252
4.4.2	Product-convolution estimates for partial derivations on the noncommutative plane — 257
4.5	Integration formula up to a constant — 260
4.6	Measurability in the noncommutative plane — 266
4.7	Notes — 276
<b>5</b>	<b>A <math>C^*</math>-algebraic approach to principal symbols and trace formulas — 278</b>
5.1	Introduction — 278
5.2	Principal symbol mapping in the $C^*$ -algebraic context — 281
5.2.1	$C^*$ -norms on tensor products of $C^*$ -algebras — 282
5.2.2	Principal symbol mapping using the Calkin quotient map — 283
5.2.3	An abstract trace formula — 286
5.3	Trace formula for zero-order pseudodifferential operators — 289
5.3.1	Symbol map on product-convolution operators on $\mathbb{R}^d$ — 290
5.3.2	Extension of Connes' trace theorem — 297
5.3.3	Failure of a symbol map for nonhomogeneous operators — 299
5.4	Principal symbol and trace formula for noncommutative tori — 302
5.4.1	Principal symbol map — 302
5.4.2	Trace formula — 310
5.5	Principal symbol and trace formula for the noncommutative plane — 314
5.5.1	Principal symbol map — 314
5.5.2	Trace formula — 321
5.6	Principal symbol and trace formula for $SU(2)$ — 330
5.6.1	Differential calculus of $SU(2)$ — 330
5.6.2	Principal symbol map — 334
5.6.3	Description of the symbol algebra for $SU(2)$ — 338
5.6.4	Trace formula — 344

5.7	Notes — <b>347</b>
<b>6</b>	<b>Quantum differentiability for the Euclidean plane — 349</b>
6.1	Introduction — <b>349</b>
6.2	Compactness estimates for the quantized differential of a differentiable function — <b>354</b>
6.3	Approximation of quantized differentials by principal terms — <b>361</b>
6.3.1	Approximation of differentials — <b>361</b>
6.3.2	Approximation of densities — <b>367</b>
6.4	Integration of quantum densities — <b>371</b>
6.5	Approximation of homogeneous Sobolev functions by smooth functions — <b>377</b>
6.6	Trace formula for quantum densities on the Euclidean plane — <b>381</b>
6.7	Notes — <b>386</b>

## Part III: Further applications

<b>7</b>	<b>Connes character formula — 391</b>
7.1	Introduction — <b>391</b>
7.1.1	Spectral triples and the Connes–Chern character — <b>391</b>
7.1.2	Hochschild homology and cohomology — <b>394</b>
7.1.3	Statement of the Connes character formula — <b>395</b>
7.2	Exploiting Hochschild cohomology — <b>397</b>
7.3	Commutator estimates — <b>406</b>
7.4	Asymptotics for the heat semigroup — <b>412</b>
7.5	Proof of the Connes character formula — <b>418</b>
7.6	Notes — <b>425</b>

<b>8</b>	<b>Density of states — 426</b>
8.1	Introduction — <b>426</b>
8.2	Compactness estimate for the density of states — <b>433</b>
8.3	The density of states trace formula — <b>442</b>
8.4	Invariance under perturbation — <b>448</b>
8.5	Density of states for homogeneous potentials — <b>451</b>
8.6	Notes — <b>454</b>

**Bibliography — 457**

**Index — 469**
