

Acknowledgements

The authors are grateful to various colleagues both in academia and industry who read through draft manuscripts. Gratitude also goes to Mohammed Shahid Irshad, Jasmine Kaur, Priyanka Gupta, and Chanchal – research scholars at the Department of Operational Research, who have helped in carrying out the reading of the drafts as and when needed. Our appreciation also goes out to *Damiano Sacco*, Editor Engineering/Computer Science, De Gruyter, and *Karolina Sobańska*, who has played a vital role in letting us know guidelines and other steps of the manuscript production process. In addition, we are honoured to be associated with Prof. Mangey Ram who showed faith in us for carrying out the book compilation work under his series.

Of course, no author can successfully complete a book project without support of family. Our beloved appreciation to our respective families for affording us their patience so that our thought could be translated and compiled in the form of this book.

Dr. Adarsh Anand
Dr. Mohini Agarwal
Dr. Deepti Aggrawal
