

# Acknowledgments

I am very grateful to several people and institutions that have allowed me to gain access to material I used for this book. I want to begin thanking the University of Twente, which has been my home-base, and all the support staff and colleagues since I joined in 2007. I want to thank the MESA+ Institute, NovelT, and the DesignLab for facilitating new initiatives and innovations such as The Future Under Our Skin (FUOS) [2]. I am privileged to have been supported also by the Mechanical Engineering Department and the Edgerton Center at the Massachusetts Institute of Technology (MIT), USA. The corrections for this book were done during my sabbatical at the École polytechnique fédérale de Lausanne (EPFL), Switzerland, in the spring of 2022.

The team at De Gruyter has been a unique source of support, particularly Karin Sora who believed in my dream of writing this book and made it happen with her team: Ute Skambraks, Ina Talandienė, Vilma Vaičeliūnienė. Volker Hessel was the one who put me in contact with Karin, and that deserves a big ‘Thank you’!

A special ‘thank you’ goes to the people who made possible to have a unique prologue for this book.

- Robert Langer kindly agreed to write about the practical aspects of this book. I also thank Samir Mitragotri who put us in contact.
- Jarka Glassey has given a complimentary analysis of what this book can provide to the future engineers and their teachers. I met Jarka thanks to my long-time friend and collaborator, Daria Camilla Boffito.

In several stages, I counted with special support from Gareth McKinley, Joe Niemela, Ian Hunter, and Lynette Jones, who always gave extremely good ideas that helped me improve the quality of this book.

My gratitude goes also to several funding agencies and organisations that have provided support and a platform to amplify my message over the years: the Dutch Research Council (Nederlandse Organisatie voor Wetenschappelijk Onderzoek NWO), the Dutch Research Agenda (NWA), The Royal Holland Society of Sciences and Humanities (Koninklijke Hollandsche Maatschappij der Wetenschappen KHMW), The Royal Netherlands Society of Engineers (Koninklijk Instituut Van Ingenieurs KIVI), the European Research Council (ERC), The Abdus Salam International Centre for Theoretical Physics (ICTP), the Young Academy Europe (YAE), the Global Young Academy (GYA), and the magazines *U-Today*, *De Ingenieur* and *The Chemical Engineer*.

Those who read this book in the early stages had to digest a half-baked idea, but the book was shorter. The ones reading the book towards the end of the project had more to read, but benefited from the first waves of support. In sum, writing this book would have been impossible without the support from the following people which I provide in a loosely established order:

- Sebastian Husein helped me with being critical about concepts I really needed a fresh angle. The “interesting entrepreneurial engineers” I interviewed in Chap-

ter 6: Miguel Modestino, Daniela Blanco, Connie Nshemereirwe, Richard Novak, Stafford W. Sheehan, Akash Raman, and Tom Kamperman. Surya Raghu, Dave Blivin, Bob Lansdorp and Gerard Cadafalch really helped me during conversations about entrepreneurship and their own company's journeys. Daniel Jitbahadoer and Arian Hohmann helped me a lot with design ideas and unconventional support!

- Han Gardeniers, Detlef Lohse, and Pedro Cintas Moreno have been like fathers since my PhD years, and have always been a sounding board;
- colleagues at the University of Twente, from different departments: Devaraj van der Meer, Albert van den Berg, Marike ter Maat, Kostas Nizamis, Frank van den Berg, Daniel Chehata, Chantal Scholten, Alvaro Marin, Mathieu Odijk and Tanya Bondarouk, provided very valuable insight at different stages, Nelly Litvak inspired me to focus on our STEM students;
- from other institutions, Davide Iannuzzi, Andrzej Stankiewicz, Andrew Dickerson, Javier García-Martínez, Robert Lepenies, Aldert Kamp, Alfo Batista, Javier Rodríguez, Alberto Levy, Luis Perez-Breva, Jealemy Galindo, David Tarbay, Ernesto Altschuller, Miguel Delcour, Eveline van Zeeland, Chris Moser and Jorge Parada;
- the work of science communicators and journalists was an invaluable source of tips: Laurens van der Velde, Michaela Nesvarova, Jim Heirbaut, Adam Duckett, and Jennifer Chu;
- from my team of grad and postdoctoral students: Diana van der Ven, Miguel Quetzeri, Keerthana Mohan, Dawid Surdeko, Jelle Schoppink, Pep Canyelles, Nicolás Rivera Bueno, and a very big thanks to 'the Dude' Stefan Schlautmann;
- other former students that were instrumental: Kevin Rouwenhorst, Maarten Ladrak, Bas Koelewijn, and Jochem Tijburg.

A very special 'thank you!' goes to my family and the support I have received throughout my life. Beginning with my mother, Pura María, who has inspired me since I was little. I still remember seeing her working at the Chemistry lab in one of the oldest breweries in Cuba. My fascination only grew when I found she wrote a book about her father, i. e., my grandfather, Virgilio Rivas,<sup>4</sup> a man who shaped my personality and still today I look up as example. My cousin Wendy Barnet, who has shared with me many moments and ambitions, namely the dream of writing books. She has published her first book for children and I look up to collaborate very soon in this endeavour.

Among my family members who could not enjoy with me the culmination of this book are two very special loved ones that require a separate mention. My father, Israel Evaristo, took me when I was a small boy to his work at the Editorial Científico-Técnica, in Havana. I remember with a bit of nostalgia the smell of fresh ink at the press while printing stories that I could not have imagined have defined what I do now: Science

and Technology. He also wrote a book, about mathematical puzzles,<sup>5</sup> and I am sure he would have been proud to see I kept the family tradition of writing books. Then comes my aunt, Mabel, who inspired me with her work attitude and unconditional support at every step I took. I will never forget the sound of the typing machine when she worked translating documents, and later when computers came into the picture, the careful way of reading and making sure the message was clear and accurate. She also wrote a book, which Wendy, her daughter is editing now.

Lastly, the time during which I wrote this book was a contrasting period in my life. It was full with very good and sad moments for the extended family, but more so for my closest or nuclear family, in particular Lea Milovich, my wife. She, her brother Lazar and her father Marko suffered the loss of my mother-in-law, Miriam to a disease that impeded her to meet her youngest grandson. Lea and our two sons, Leo and Daniel, have been with me 24/7 in this ‘author-journey’ and I could not imagine better companion. I experienced inspiring moments changing diapers and walking outside for fresh air with them. The geographical distance from my daughter Gabriela did not stop me from thinking how to make something useful for her, too. She was one of the first I pitched the book idea and I had her in my thoughts as a ‘potential’ reader for this book.

To all these special people, including you, the reader of this book: thank you for picking it up! I can only hope its content will keep inspiring you and future generations.
